"ICE CREAM MADE THE RIGHT WAY WITH A WHITE MOUNTAIN FREEZER IS EASIER TO MAKE THAN A PUDDING OR A PIE"

It drives home the vital selling feature for all time to come. No longer need Ice Cream be considered a shop-manufactured article. Every housewife can make **pure** Ice Cream right in her own home in a few minutes if she makes it the right way with a White Mountain Freezer.

'Tis now a well-known scientific fact that Ice Cream is beneficial to children and can be eaten with safety by invalids or persons with weak digestion.

The Tub of clear white pine treated with a solution that makes it waterproof, brineproof and watertight.

The three flat hoops are heavily galvanized to prevent rusting.

The Can of heavy charcoal tin plate—perfectly sanitary.

The two beaters of malleable iron —guaranteed unbreakable.

The triple motion—the great outstanding feature—learn more of it —simple and effective.

Neatly covered, attractively labeled and immediate shipment.

Supply of advertising literature sent on application to nearest branch.

NEW ADDITIONS TO THE FAMOUS SERIES OF

McClary's GAS RANGES

Style No. 456T

Style No. 415

The extremely small amount of floor space taken up compared to the cooking and baking facilities makes the No. 456 T specially adapted for use in apartment houses, etc.

The Range has seven burners in all—two in oven, one in broiler, two and a simmering on main top and one above—in a floor space of merely 32 in. over all.

A special feature is that the Broiler Oven can be used for roasting, if oven is required for baking.

A new leg socket keeps the Range firm and rigid.

The closed-in shelf will be found very useful.

We strongly recommend this Range to your notice.

The 415 is a small, compact and highly efficient Range for use in cottages, small apartment houses, etc.

A strong feature and one that will appeal to housewives is that all the cooking burners are at the front—no bending over hot burners

The Range is strongly braced round the edge of the Oven Bottom and up the sides to keep it perfectly rigid.

Has one Oven Burner and three burners on top.

The leg socket constructed on the same principle as the 456 T.

The inside of the oven prevented from rusting by the application of a special process of aluminizing.

The 415 can be provided with a solid top for use of Natural Gas.

A Range that will please the economical housewife.

London **Toronto** **Montreal** **St. John, N. B.** **Hamilton** McClary's

Two Outstanding Models of the Famous Series of McClary's GAS RANGES

The "Champion"

Is absolutely the only interchangeable Range manufactured.

A Range that meets the requirements of an all-year range to perfection.

The "Champion" is a complete Coal Range and a complete Gas Range all in one, at the price of one—that is, double service from one Range.

It also means that the housewife has only one Range to clean and does all her cooking in one place, thereby saving many steps during the day's work.

The Champion burns, with complete satisfaction, Natural Gas, Artificial Gas, Coal and Wood, and all garbage accumulated during the day.

It takes but a minute to change from one fuel to another.

Fitted with McClary's famous semi-steel indestructible fire-box linings.

Constructed of highest grade steel, same as used in our famous Steel Coal Ranges.

Ask our nearest Branch for more particulars.

Style No. 456 E.S.

This Range, as illustrated, gives exceptionally large cooking and baking space.

For neatness, compactness and efficiency the No. 456 E.S. is hard to beat.

Has eight burners in all—two long burners for oven and broiler, one round burner for broiler, four star and one simmering on main top.

The housewife has no stooping—everything at a convenient height.

All fumes and odors carried away by special flue system.

The Canopy Top and large, closed-in shelf will be found extremely useful to the housewife.

Extra large broiler oven, fitted with sanitary white enamel broiler pan and retinned broiler rack. resting on cast iron supports.

We urge all dealers to make a special feature of this highly-efficient gas range—we have found it an exceptional business-producer.

See our 1914 catalogue.

970 Broadway, Chicopee Falls, Mass., U.S.A.

Allow your Oil Heater Trade to expand by selling the "New Famous"

It's a great seller between seasons. It provides just the right amount of heat for those chilly mornings and evenings and saves time, trouble and money by removing the necessity of starting the regular heating system.

Its one-piece Copper Tank is unique since it's the only one manufactured and is practically indestructible.

The new method of replacing the wick reduces this operation to the minimum amount of trouble.

The Automatic Locking device is safe and sure—keeps the wick the height you want it.

The improved oil indicator saves a good deal of worry as to amount of oil in tank.

Finished in nickelled or black enamel.

Let our nearest Branch send you full particulars for your Spring business.

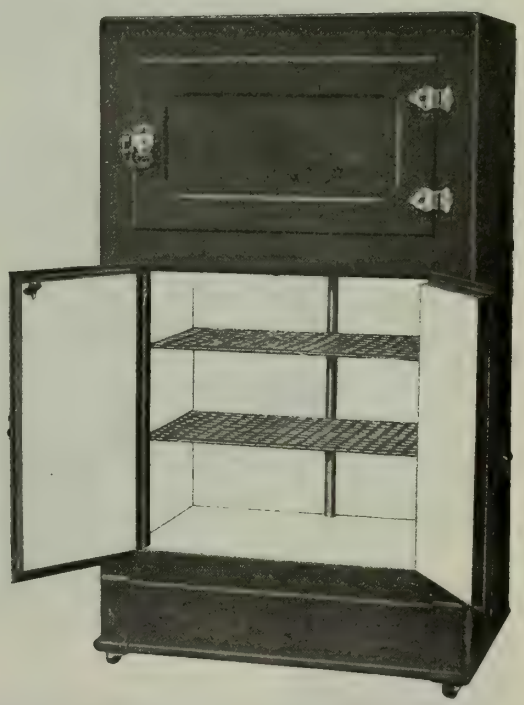
McClary's Quality Goods

Here we illustrate two popular refrigerators that have already become famous and are exceptionally good sellers.



McCLARY'S ICEBERG REFRIGERATOR

An extremely moderate-priced Refrigerator made of Hardwood, with Golden finish, and Brass Locks and Hinges.

Insulated with cerite paper and lined with galvanized iron, and fitted with cleanable flues and large provision shelf. Provided with drip cup, casters and a swing base for removing drip pan.

All working parts subjected to critical examination before leaving the factory.

In three sizes: Nos. 450, 460 and 470.

McCLARY'S MODEL REFRIGERATOR—No. 68

Compares very favorably with more expensive lines.

Made of Hardwood, finished in Golden Oak, with heavy brass locks and hinges. White enamel lined with superior insulation.

Ice Chambers linings of metal are removable for cleaning. Doors on provision chambers are white enamel lined. Has retinned wire shelves.

In four other styles: Nos. 66 and 67, 66A and 67A.

KIR-BEN

KIR-BEN
Damper Talk

A Series of Kir-Ben Talks will appear in this paper—watch for them

SECTIONAL VIEW OF KIR-BEN 1914 FURNACE
Showing New Style Duplex Grates, Large Feed Doors, Automatic Damper Control, Water Coil Openings, Heavy Base and Bottom, Straight Firepot with Heavy Flanges, Large Ash Door, Etc.

COAL when burning gives off a poisonous gas, which, if allowed to escape from a furnace into the living apartments is disagreeable, and in large quantities very dangerous. To prevent the escape of this gas it is therefore necessary in constructing a furnace to have as few joints as possible, and to have all joints used thoroughly tight. Much has been accomplished in this direction, but in all cases where direct draft dampers are included in the furnace (and they should be on all furnaces,—and are on many), existing constructions require one or more holes through the radiator or radiator connections into which the damper may be built, thus allowing opportunity for gas to escape through them. The Kir-Ben patent damper is the only construction that does not require such openings, and may be regarded as the only gas-tight direct draft damper obtainable.

Automatic Feature

The Kir-Ben Damper is entirely automatic in its action, and requires no regulating or attention whatever. The fire travel of the Kir-Ben furnace is so free and, at the same time so perfect, that the fire will kindle and at all times burn perfectly with the damper closed, and the real function of the damper is to provide a short or direct connection with the chimney so as to prevent smoke or gases coming through the open feed door when adding fuel.

The automatic action is such, that opening the feed door opens the direct draft damper —and closing the feed door closes the damper. Nothing could be more positive, or trouble-proof—the mechanism is so simple that it cannot go wrong, and so heavy that it cannot burn out. It is so well arranged that it cannot refuse to operate, and will always give good service. The damper flap is so constructed that it is absolutely tight and fits like a door with a ground joint. It cannot block up with soot or give trouble of any kind. The flap hangs free, and is entirely disconnected from the damper mechanism, thereby providing an explosion damper that will take care of any gas explosions, and providing fully for safety in this respect.

Patents Pending. Send for Catalogue now ready.

RANGES, HEATERS, FURNACES AND GAS STOVES

of all descriptions and for every purpose.

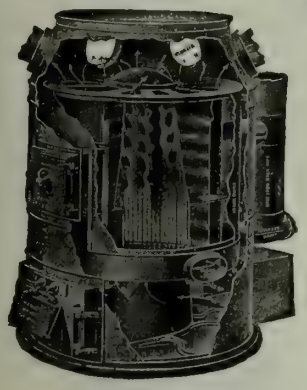
MANUFACTURED BY

THE BURROW, STEWART & MILNE CO., LIMITED

HAMILTON TORONTO MONTREAL WINNIPEG

"The Cuba"

"The Cuba"



A New Heating Stove for Hard or Soft Coal, Coke or Wood

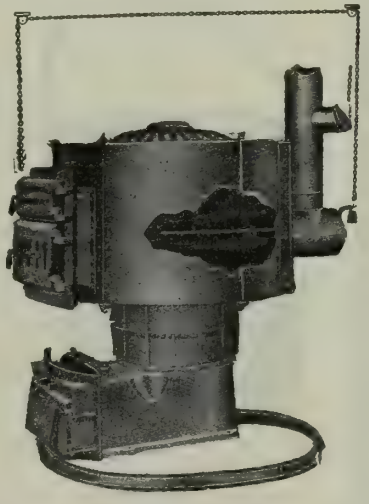
This beautiful and original design surpasses anything yet produced in the stove makers' art, and excels in powerful radiation and economy of fuel.

Special Features:—Genuine Duplex Grates similar to a range grate, Hot Blast attachment, large deep ashpit, loose nickelled trimmings, cast iron linings above grates. For wood only, reverse duplex grates.

This Heater has embodied in its construction most all of the improvements in modern heaters. In design it is handsome and symmetrical. It is highly finished and fully nickel-plated.

Try a sample and you will repeat your order. Patterns are not yet ready, but we will be able to ship samples in two months. Do not book orders for Heaters before seeing the Cuba.

The Kelsey



The Kelsey has three times as much heating capacity as any other furnace with the same size grate—note the zig-zag Heating Tubes, with all sides exposed to the heated gases. Kelsey Heating is the most efficient and economical. A dealer with the Kelsey agency has something different.

Our line of Warm Air Heating Devices is complete in every respect. The Kelsey Warm Air Generator is in a class by itself. They all admit it is the best. A dealer with our line of heaters can compete with anyone, as we have also the "Canadian Air Warmer," which is all that its name implies, and the Tropic furnace, the lowest-priced furnace we make.

The Tropic

The Tropic is a little wonder. It is well made and its flue construction and radiator proportions are perfect. For a low-priced furnace, The Tropic cannot be beaten.

The Canadian Air Warmer

This cut shows the Canadian Air Warmer without the galvanized casings. Note the long fire travel, the straight fire pot. Fire Door does not become over-heated, and ashes do not cling to sides of fire pot. We are not afraid of comparing the C. A. W. with any other furnace made in Canada.

Anti-Rust Galvanized Ware

Extra Heavy

Straight Pattern

No. 160.

12 inches across top. Heavy rod bail with wood grip and heavy steel ears. A serviceable pail for all ordinary purposes.

Heavy Steel Buckets

A great deal of the galvanized ware on the market is made from sheet galvanized iron, whereas **the S. M. P. Anti-Rust Galvanized Ware** is manufactured out of black iron, the galvanizing being the last operation. Our ware is, therefore, non-leakable, and is strong, durable and perfect in every respect.

BOSS OVEN

GLASS DOOR

GUARANTEED

BOSS Glass Door OVENS

Sold throughout the World. In almost every Country where Oil, Gasoline or Gas is used as fuel, you will find the Boss Oven on sale.

Its tremendous popularity is due to the fact that it is first of all a good and economical baker. We guarantee it to bake or roast satisfactorily on any good oil, gasoline or gas stove, or "money back" without argument.

The "BOSS" is made better than any other Oven. Only the best materials are used. The body is made of Mecca Lustre Polished Blue Steel. The linings of heavy Corrugated Tin Plate, having thick asbestos inner linings throughout.

Its Patented Glass Door, which we guarantee not to steam up or break from the heat, has been a universal success. More than 600,000 of this style are now in daily use.

Many patented and exclusive features are found in the Boss. The new Hinge and Door Support leave the door opening entirely free when Oven is open. No danger of burning the hands or arms by coming in contact with wires or chains.

Large variety of styles and sizes in Glass and Steel Doors are shown in our new catalog, which will be sent on request. Write for it to-day.

NEW BOSS OIL STOVES

Every Vital Feature in the construction of an Oil Stove has been carefully worked out in the "New Boss." There is nothing complicated to get out of order—nothing hard to understand to operate it properly.

Simple but Substantial construction has been adhered to throughout. The extra wide top gives more room for cooking utensils. The legs are strong cast iron, making the stove very rigid.

Patented High Wick Limits or fingers are provided on the inner combustion tubes which are engaged by the wick when turned at full burning height. These fingers automatically trim the wick when chimney is revolved.

The Intense Blue Flame plays right against the cooking utensil, giving quicker results and using less oil than most other stoves.

Sanderson-Harold Refrigerators

Eight wall insulation and with **MINERAL WOOL** the best known non-conductor of heat or cold

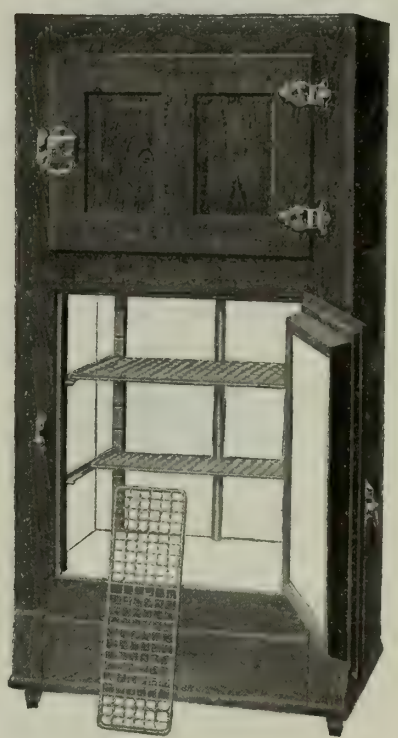
Mineral Wool has the appearance of wool. It is a vitreous substance produced by steam coming in contact with a small stream of liquid glass, which consists usually of the slag of a blast furnace or other similar substance. After this substance has become cold, the expansion produces about 90% air cells and 10% solid matter. Thus, the air is confined in its minute cells, consequently **it cannot carry heat** and makes the best insulation for refrigerators. It is light and will not hold nor produce a bad odor. Does not decay.

We make a specialty of refrigerators. Materials are the best obtainable. Lumber is thoroughly kiln dried before cut up. Trimmings, shelves and casters are latest designs.

Pure, DRY air, free from odors. Experiments show that the air is drier in the Sanderson-Harold than the external air. Perfect circulation.

Strong trap assures perfect drainage and keeps warm air out.

Every Sanderson-Harold Refrigerator is guaranteed. We will remit purchase price and take it back if not exactly as we claim. **Write for booklet.** It shows our complete line.



Sanderson-Harold Refrigerators are very profitable as well as dependable. **A trial will convince you.**

We also manufacture a line of **Screen Doors** and **Window Screens** that are good sellers.

Make This a Dana Peerless Freezer Summer

"Summer!—Ice-cream!" Don't these two seem to belong to one another?

Wouldn't there be something kind of missing in a Summer without Ice-cream?

That's how most people—your customers included—feel about it.

In the hot evenings, when they're away—at summer cottage at the lakeshore—at camp—they want ice-cream. And they even take the trouble to bring it out from town—so that they may have it fresh.

If they had a freezer they could make it themselves, fresher, colder, than they could possibly buy it.

Just here is your chance! Be in a position to introduce them to the Dana Peerless Freezer, to fill their orders for the Dana, to reap the profits that go wherever the Dana goes.

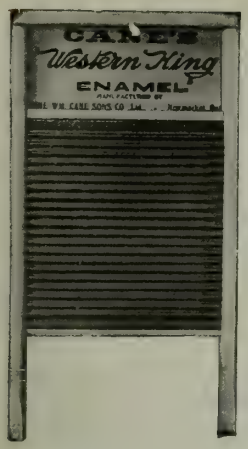
And how can you do this? It's simple enough! Stock the Dana Peerless Freezer **now**. Have it in your store, where those customers can see it. Call their attention to its many elegant features. Such as—

The tall, slender can, that presents a maximum surface to the freezing mixture.

The scientifically designed dasher that removes every bit of cream as soon as it becomes solid.

The ease with which it may be cranked.

Make a regular Dana Peerless Freezer campaign of it and you won't regret it. For the Dana Peerless Freezer will pay you for your trouble, handsomely—both in good-will and actual profit.



Write now and get the details.

When you sell GLIDDEN "Green Label" Varnishes

You are selling a known quantity

WE venture to say that there is scarcely a man or woman in your neighborhood who hasn't heard of Glidden "Green Label" Varnishes, and what's more, holds a good opinion of them.

This good opinion can easily be converted into cash if you will make a neat, attractive display of Glidden "Green Label" Varnishes in your windows and mention the various useful purposes for which they are intended.

Housecleaning season is right at hand and with it the demand for something that will brighten up the home. The answer to every such need is JAP-A-LAC. A person thinks of it almost automatically.

Thanks to the widespread advertising we are doing, of which we shall tell you more later, Glidden's "Green Label" Varnishes are virtually self-selling. They're right in the same class as staples.

For renewing things around the home—it's JAP-A-LAC. For painting and decorating—Glidden's "Green Label" Varnishes. We have an attractive proposition to offer you in connection with Glidden's "Green Label" Varnishes, White Enamels, Endurance (Mission) Wood Stains, Waterproof Flat Wall Finishes, Cement Coatings, and JAP-A-LAC, if you will just drop us a card saying that you are interested. HARDWARE AND METAL

Vol. XXVI MARCH 21, 1914 No. 12

Solving the Problem of Sales Expansion

How One Firm Solved a Perplexing Problem—Business Expanded With Very Little Extra Expense—Overhead Cost of Doing Business Reduced—New Lines Added—Results.

Written for Hardware and Metal by David G. George

A WELL-KNOWN Canadian hardware firm doing business in a store which had been established for many years, found that the yearly net profit was dwindling. The firm had a good connection, the store was in a good location, but with competition becoming keener and the profits on staple lines becoming shaded on account of excessive competition, the firm found that they were not making the net profit they thought they were entitled to. They were a few years ago in exactly the same position that a large number of other firms are in to-day.

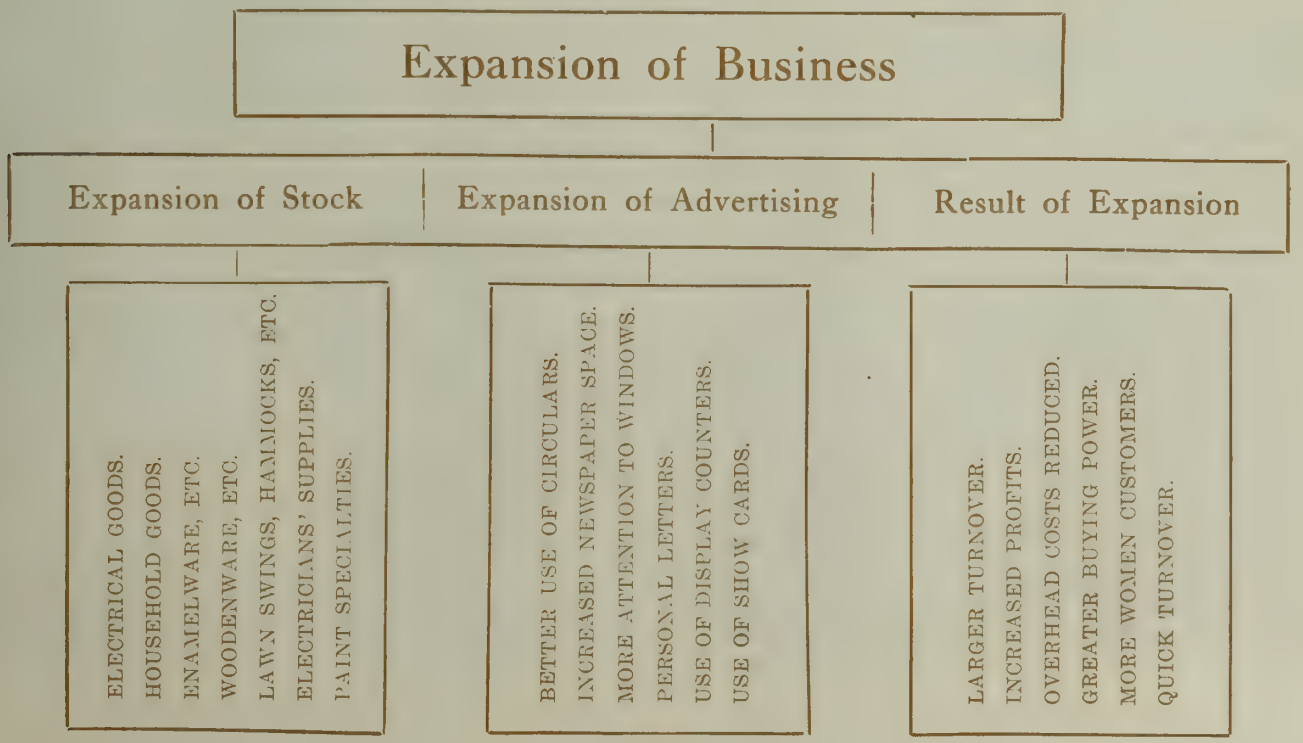
This particular firm realized that something would have to be done in order to expand the sales end of the business, and at the same time keep down the overhead cost of doing business, which at that time was running fairly high.

The sales staff could be placed in Class A. The men comprising the staff were good, capable men who thoroughly understood the rudiments of retail hardware merchandising. They clinched nearly all the sales that could be made to customers who entered the store. They thoroughly understood the stock and its location, and they always kept it in a well arranged and tidy condition.

The buying was well looked after by a capable man who always secured the best prices, and the firm was able to figure successfully on many of the contracts which presented themselves from time to time.

The firm did a large cash business, and were always careful in keeping the credit account as low as possible.

A nice trade was secured from local factories. Sometimes the quotations on belting, oils, screws, etc., were very close, but the firm catered to this class of trade and figured that the factory trade was desirable, particularly in view of the fact that settlements were always made at the end of each month.



The office work was in capable hands, the delivery system was adequate, and customers always received good service.

The goods carried in stock were always of a high quality, everything was done to please customers, and still the firm was not making money, at least not a reasonable amount on the investment.

It took the members of the firm a considerable length of time to figure out just where the difficulty was and why they were not making good returns on their investment.

Analysis of Business.

After a close analysis of their business they arrived at the conclusion that

a business expansion would have to take place. They would have to increase their sales and at the same time keep down the operating expenses. They had the utmost confidence in the ability of their selling staff, but came to the conclusion that the selling staff could dispose of a larger quantity of goods, if the goods were there to sell. In other words, the selling staff was not working up to its full capacity. It was doing as well as could be expected with the stock at its command, but it could handle other lines in addition.

Held a Conference.

The next move on the part of the members of the firm was to call a general conference of all the employees. One of the firm explained that more goods had to be sold, and asked the clerks if they could suggest any new lines which could be added. A large number of suggestions were made, and before the conference was over it was decided that among the new lines added there should be household goods, enamelware, woodenware, lawn swings, hammocks, electricians' supplies, electrical appliances, and paint specialties.

It might be here explained that at the conference the clerks mentioned the names of several lines for which they had been asked, but which were not carried in stock.

One clerk intimated that he had received several inquiries for electrical appliances such as coffee percolators, electric toasters, irons, vacuum cleaners, etc. Another clerk thought woodenware would be a good seller, and suggested that such lines as bakeboards, clothes baskets and racks, sleeve ironing boards, rolling pins, wood bowls, wood spoons, door mats, etc., be carried in stock.

Another clerk said that during the summer months the firm should be able to sell hammocks, lawn swings, seats, croquet sets, etc.

The clerk who had charge of the tool department suggested that the mechanics' tool department be extended, and that electricians' supplies be added. This meant the addition of electricians' braces and bits, drills for expansion bolts, pliers with insulated handles, electricians' screwdrivers, blow torches, etc.

The clerk who had charge of the paint department suggested that some system be worked out whereby more prominence would be given to paint specialties. This line had not been pushed as thoroughly as it might have been, and the result was that although there was an exceedingly heavy sale of the ordinary ready mixed paint, there was not a heavy sale of sundries, the most profitable line of all.

Other lines suggested were dustless mops, express wagons, and several lines which could be readily sold in a hardware store.

One or two of the older clerks thought that the introduction of such lines, and the departure from the old methods of doing business, would have a bad effect on the firm's business, and that the store would be looked upon as a department store rather than as a hardware store. Their objections were overruled when instances were cited to indicate that certain other large and successful firms were making a success of selling the new lines which were to be added to the stock.

The two older clerks still maintained that a hardware store should only carry the lines which they supposed constituted a hardware stock. These lines included nails, wire, paint, bar iron, and the staple lines of hardware. They were so persistent that it remained for the senior partner in the firm to remind them that their duty would be to sell

Two of the older clerks thought the plan would not work out satisfactorily.

goods, and that in future a complete record would be kept of the sales of each clerk.

Buying the Stock.

The buyer's attention was first devoted to the purchase of a good line of electrical appliances. The order included electric toasters, irons, disc stoves, percolators, and a medium-price line of vacuum cleaners. Next came the woodenware order, including ironing boards, washboards, wood tubs, clothes driers and baskets, bakeboards, mops, wood bowls, spoons, and several other lines of woodenware.

Enamelware, tinware, and aluminumware were next taken up, and a representative stock was purchased.

In the tool department such lines as electricians' pliers, drills, screwdrivers, blow torches, and several other specialty lines were added.

It was during the month of February when these orders were placed and the goods received into stock. The season was rather slack, and the clerks had plenty of time to become familiar with the new goods and arrange the stock.

An order was also placed for hammocks, lawn swings, croquet sets, and other summer lines to be delivered May 1.

You would naturally think that the addition of these lines would mean the necessity of an addition to the store, but such was not the case.

The hardware firm could not enlarge their quarters on account of other old-established firms being located on each side of the building, and the latter would not think of selling any part of their property.

Before the new stock began to arrive, plans were under way for displaying the goods.

One section of wall space about 12 x 12 had for years been practically wasted. The only articles displayed in this valuable space were a clock, a calendar, a whip rack, and several articles hanging from brackets attached to the wall.

This space was immediately cleared and shelving erected for the enamelware, tinware, and aluminumware. Plenty of space was then available for displaying at least one sample of each utensil, the balance of the stock was carried upstairs, and taken down as required.

The electrical goods were displayed on a special table secured for the purpose. The table was in the form of a double-decker, the stock being carried in the lower section and the samples shown on top of the table. The top of the table was covered with green baize, and the nickel-plated appliances showed up to splendid advantage. Showcards supplied by the manufacturer were also displayed on the table, and in various parts of the store. A stock of electrical appliances does not take up very much room. The goods are neatly packaged and are not heavy.

The woodenware was also displayed in an attractive manner. It had previously been the custom to have three or four washing machines of each kind shown on the main floor. The idea in showing so many was figured out by one of the older clerks, who said that customers were always impressed when they saw a large stock. Whether he was right or not did not make any difference when the new plans were carried out. Under the new arrangement only one washing machine of each kind was shown instead of three or four as formerly.

The result was that with only four machines on display there was a large amount of extra space. This space was used to show clothes driers and racks, tub stands, tubs, mangles, folding and plain ironing boards, and other lines of woodenware.

Some small tables were also secured. One was used to display food choppers, raisin seeders, meat juice extractors, apple parers, cherry stones, etc. Another table was used for dustless mops, dust-

ers, etc., and a small rug was secured for demonstrating the use of the vacuum cleaner. Several other innovations were also introduced, and the store took on an entirely new appearance.

If you are a hardwareman, and in all probability you are, or you would not be reading this article, take out your pencil and figure up how much this extra stock would cost.

You will find that the investment was not very heavy. You can buy a splendid assortment of the goods mentioned at a very moderate cost. It might be here mentioned that this firm did not plunge. They simply bought a good representative stock for the purpose of feeling their way.

Selling the New Lines.

With the new lines in stock the problem of disposing of them was taken up. After the goods were well displayed in the store, the first advertising mediums to be taken up were the show windows.

The show windows of this firm had always been very neat and the goods were always in good order; but the windows always had a certain sameness. It was decided that one window would always be used for featuring tools, builders' hardware, etc., as formerly, but that the other window would in future be devoted largely, for some time at least, to displaying the new lines which had been introduced.

The first display consisted entirely of household goods, principally wash-day needs. In the centre of the window was placed an ironing board ready for use. A lady (model borrowed from dry goods store) using an electric iron stood at the board. This was the centre of attraction. The balance of the window was used for displaying other lines in which the housewife was interested. A price card was placed on each article and the prices could be easily read by persons who stopped to look at the display.

A large showcard appeared in the window, and on it appeared: "Blue Monday a Day of the Past, Since Blanks have started to sell Washday Needs."

The first day on which the display appeared was a Saturday, and during the day a number of sales were made. Ladies stopped and looked at the display, some went into the store, others passed on only to return at some later date to inquire for some household article. The members of the firm could see from the start that the new lines were going to sell.

Electros were secured and the new lines were featured in the newspaper advertisements. Ads. were inserted twice each week instead of once as formerly.

Lady customers began to visit the store, and the news soon spread around the vicinity that the hardware store had gone into the sale of household goods.

From that time on the business in the new lines began to grow, and repeat orders were numerous.

The salesmen were enthused with the success of the new departure, and each clerk tried to run his weekly sales as high as possible. A record of sales of each clerk was kept, and this had the

The new household goods department proved popular with the ladies.

effect of keeping the sales staff always on the alert.

The goods on the display counters were always kept clean, and the price tickets with prices in plain figures accompanied each article.

The window displays were changed at regular intervals, and no advertising matter was allowed to be wasted.

It might also be stated that the predictions of the older clerks did not prove correct. Instead of affecting or decreasing the sale of staple lines of hardware, the sale was increased. The new innovation brought into the store many customers who had never been in before, and at the end of the year every department of the store had shown an increase.

The Result.

It is over two years since this firm added household goods to its stock, and when one of the members of the firm was asked a short time ago what the result had been, he stated to a representative of "Hardware and Metal" as follows: The result has been a larger turnover and a quicker turnover. We have more women customers, and the business is nearly all cash. Our profits have increased considerably, and our percentage cost of doing business has been reduced. We have greater buying power. Business in our paint department has increased partly because we now have more lady customers and partly because we are more active in pushing the sale of paint sundries. With the introduction of the new lines a wave of enthusiasm seemed to pass over our sales staff, and the results have been excellent. I think we are on the right track. A few of the old-timers told us that we were making a mistake, but results have proven otherwise.

CREDIT SYSTEM THE BEST.

(Reprinted from "Trade" of Detroit.)

A prominent merchant, who recently abandoned the cash system, says that credit strictly and carefully given is the only system on which to do business.

His experience woke him up to a few big facts in the trade that cost him something to learn, but which he now says are worth the price. In summing up reasons for a change, he gives seven good ones:—

1. They have the "shopping around" habit bad.

2. They refuse to get the habit of trading at one store.

3. They demand good service, but are not willing to pay for it.

4. About 20 per cent. demand good quality; low prices attract the other eighty.

5. They are closer buyers than people who have credit accounts. They will run all over town to save a few cents.

6. They are not liberal buyers; they make a certain sum of money buy a week's supply.

7. The telephone, so largely used by women, demands as a corollary the credit system; this the cash man automatically abjures. In a cash concern "leaders" assure too much importance and are often sold below cost. Credit buyers are found to be the best livers and [illegible] on quality.

The merchant concluded that credit, strictly and carefully given, was the only system. He notices that the big department and jewellery stores of Chicago and New York advertise for charge customers. He has "reneged" in strict cash and is more prosperous than before.

A Blue Store With Distinguishing Features

A Retail Hardware Store With an Individuality—Blue the Predominating Color—Novel Advertising Stunts—A Well-Arranged Stock—Description of Store.

WHEN Reg. F. Scott decided to open a hardware store at Guelph, Ont., he also decided to give his store an individuality that would distinguish it from all other stores in the city.

He has succeeded in giving his place of business, the "Blue Hardware," many distinguishing features.

Before giving a description of the store or of the methods adopted it might be in order to give some information regarding the business experience of the proprietor of the "Blue Hardware."

Reg. F. Scott first entered the hardware business as an employee of the Hobbs Hardware Co., London, Ont., in 1893. After three years he went to Buffalo to look for a new job and secured employment with the McLennan French Paint Co. at Black Rock. Mr. Scott worked his way through the factory and secured a very complete insight into the various phases of paint manufacturing. He was then sent to Columbus, Ohio, to open the Onyx Paint Store for the manufacturing firm with which he was associated.

After five years as manager of the Onyx store, Mr. Scott joined the staff of the H. W. Johns Manufacturing Co., Columbus branch.

His next move was to Forest, Ont., his home town, where he opened a hardware business, which he conducted for twelve years and disposed of last year.

In July, 1913, Mr. Scott opened the present store at Guelph, Ont.

He decided to call his store the "Blue Hardware," and to make blue the predominating color throughout his store.

One of the accompanying illustrations shows a front view of the "Blue Hardware."

The whole front has been painted a deep blue, which makes the front stand out conspicuously among the other stores in the vicinity. Not only is the store front painted blue, but the brickwork as well. In the store blue also predominates. The face of the shelving is painted blue, the counters are blue.

The interior of the wall cases are painted blue, and the silent salesmen are lined with blue cloth. The metallic ceiling is painted a light blue color, and it is the intention of the proprietor of the store to have the floor painted blue early in the spring.

Blue wrapping paper and blue twine are used for wrapping parcels. In the show windows blue also predominates, and on the price cards in the windows the figures are printed with blue ink.

The delivery wagon is pointed blue, and all delivery tags, stickers, shipping tags, etc., are blue in color.

Mr. Scott ran an advertisement in the Guelph daily papers in an effort to secure a blue horse for his delivery outfit. One of the horses secured as a result of the ad. was an extremely rare-colored animal, and more may be heard about this horse in the near future.

In the office blue stationery is used. All correspondence, statements, accounts, receipts, etc., are sent out on blue paper. All envelopes are blue in color, as well as all counter checks.

Blue stickers bearing the "Blue Scott" trade mark of the firm are placed on many lines of goods, such as enamelware, tools, garden tools, etc.

During the, winter when sleighing was good, all the delivery was done with a blue sleigh.

Mr. Scott is a great horse fancier and takes great pleasure in driving a fast horse.

The cutter in which he takes his pleasure drives is painted blue. A Hardware and Metal representative was told by a resident of Guelph that when Mr. Scott goes driving in his blue cutter you will often hear people remark: "There goes the Blue Hardwareman."

He has ordered a new buggy for the coming season, and it will also be painted blue.

Exterior View of the Blue Hardware.

Novel Advertising Stunt.

On opening day, which was a Saturday, Mr. Scott gave away absolutely free 1,200 blue dust pans. The pans were all japanned blue, and in gold letters in the centre of each pan appeared "The Blue Hardware Prices Right. Phone 31."

Two weeks later 1,200 blue stove shovels were given away free.

Pans and shovels were given to adults only. No wrapping paper was used on these free gifts, and each of the days on which this novel advertising stunt took place 1,200 people helped to advertise the "Blue Hardware" by carrying

the blue shovels and pans through the streets.

Another form of advertising indulged in by Mr. Scott is the giving free of carpenters' pencils to carpenters. These pencils are enameled blue and bear the firm name and telephone number.

The Store Interior.

One of the accompanying illustrations shows an interior view of the "Blue Hardware." Mr. Scott, the proprietor, is standing behind the silent salesman on the left side. The store is a model for neatness. There is a place for everything, and everything is in its place. The paint department is near the main entrance, and is considered one of the most important departments in the store. Immediately following the paint department on the right side is the household goods department, where such lines as enamelware, aluminumware, woodenware, etc., are featured.

Still farther back and under the office (which is elevated) is a large bolt cabinet or rack, consisting of enough compartments to carry a full line of carriage and machine bolts, coach screws, square and hexagon nuts, etc. The facing of each compartment is painted blue, and the lettering showing the sizes is in gold.

A large display rack is used to display farm and garden tools and other such lines.

On the left side of the store are wall cases, i which are displayed percolators, casseroles, and other plated ware. Some of the cases are not shown in the accompanying illustration. Shelf and builders' hardware is sampled on the face of shelf boxes, as shown in the illustration. A number of sliding ladders are used to enable salesmen to reach the high shelves.

All goods are priced in plain figures.

The office is elevated, as shown in the illustration. The office is reached by ascending a stairway near the back of store. This stairway also leads to the two upper floors, where a large number of lines of goods are displayed.

The basement of the "Blue Hardware" is also a model in many respects.

No dirt or waste material is allowed to accumulate.

Nails are stored on a platform, which has been elevated about 6 or 8 inches above the cement floor. This affords protection in case of flooding of the cellar.

The oil-room, located in the basement, is encased in brick and concrete, the only entrance being through a fire door, which is closed each night, and which would close automatically should a fire break out when the door is opened.

A visitor to the store cannot help but be impressed by the splendid arrangement of the stock and the neatness and cleanness of the various departments of the store.

Mr. Scott is a great believer in show window publicity, and believes the show window to be one of the best publicity mediums at the command of the retail hardwareman. He also believes in newspaper advertising, providing, of course, that it is properly looked after.

Another business feature which is recognized by Mr. Scott and his staff is the necessity of good service and satisfied customers.

Customers are always given prompt attention.

"Blue Hardware" has many interesting features, and is a model hardware in many respects.

Interior View of the Blue Hardware. Mr. Scott is standing behind the silent salesman.

HARDWARE AND METAL

VOL. XXVI. No. 12 Toronto, Canada, March 21, 1914 Two Dollars per Year

Our Annual Spring Number

IN THIS issue we present to our readers our Annual Spring Number. It is the result of many weeks' hard work, not only on the part of the editorial staff, but on the part of the advertisers as well. We have striven to make this issue as valuable as possible to the retail hardware merchant.

It is issued for the purpose of assisting him in his spring campaign. In this connection the retailer will find the Annual Spring Number of Hardware and Metal of two-fold value. By reading the editorial contents hardwaremen are put in touch with the best ideas for the management of the store, and the direction of the selling policies. The experiences of other dealers are given. Many practical methods for displaying stock and increasing sales are also featured. Valuable hints on various phases of the hardware business are treated in this number. We have endeavored to present only such matter as will be practical and actually useful to the Canadian retail hardware merchant. In these days when competition is extremely keen and is daily growing keener, the retail hardware merchant has to face many problems. Inroads are constantly being made in his territory by mail order houses, syndicate stores, etc. Profits on many lines are cut almost to the limit, and selling certain lines at cost is not uncommon. When problems such as these begin to affect the net profits of the retail hardwareman he often finds that he can profit from the experiences of others. In this issue we have endeavored to show how progressive dealers have overcome obstacles and expanded their sales and profits, despite the fact that they have had to face keen competition and other difficulties. Practical display methods, which help to increase sales are also featured, along with many other interesting subjects on retail hardware merchandising.

There is also another aspect in which this issue is of inestimable value to the retail hardware merchant. We have here, the largest number of advertisements ever placed before the Canadian hardware trade, by a Canadian hardware trade paper, in one issue. On these pages are shown the products of leading manufacturers and wholesalers. By studying the advertising pages closely the merchant can get in touch with many products that can be made to make profits for him. He has an opportunity of studying the many propositions advanced. He can study the advertising pages at leisure, and by keeping the number on hand for future use he has a source of ready reference to guide him in his buying. He can gain valuable pointers from the advertisements regarding goods which he may now have in stock. These points, if used, will materially assist him in making sales. There are, also, many new lines here shown, lines of goods which you may not carry in stock, but which if added to your stock, would prove to be ready sellers and profit makers. We know many of the most successful hardware buyers in Canada, who study closely the advertising pages of every issue of Hardware and Metal. We cannot impress upon our readers too strongly the fact that there is money for them in the advertising pages as well as in the editorial contents. The Annual Spring numbers of Hardware and Metal are published with a view to assisting the retail hardware merchants in their spring campaign and we believe that in this issue we have excelled all previous efforts.

Heralds of Expansion

IT was deemed highly fitting that the Spring special number of Hardware and Metal should be made an expansion number. It followed that the cover should represent expansion and to C. W. Jeffreys, one of Canada's most prominent artists, was allotted the task. Mr. Jeffreys has been painting covers for Hardware and Metal for the past three years, and during that time has prepared many which might well be termed masterpieces, but in "Heralds of Expansion," he has excelled all previous records. This remarkably realistic cover smybolizes in the most direct way the idea of expansion in a country of vast and unexplored stretches. The surveyor extends the border lines of civilization into unknown land, paving the way for the advance of agriculture and industry. In his wake follow the miner, the woodsman, the farmer and the merchant. He is in every sense of the word the Herald of Expansion.

There are evidences at the present time of the return of prosperity in Canada. As the summer develops, this movement will become more pronounced, and by harvest time the country should be swinging forward in the march of complete prosperity. The present year will see the inception of the most pronounced era of growth that the country has ever experienced. We believe this number of Hardware and Metal will serve as a herald of expansion in the hardware trade in Canada.

The Business Situation

AS FAR as hardware and paint manufacturers and jobbers are concerned, there has been a decided improvement in business during the past week or ten days, due largely to activity in spring lines. Beginning March 1, there is always an improvement in the demand for spring goods. Large numbers of orders which had been booked for spring delivery are shipped between March 1 and May 1. How the volume of this year's spring business, compared with previous years, will be, is still problematical, but judging by the number and the size of booked orders in the hands of the manufacturers and jobbers, the volume should be very heavy. On some lines booking is heavier than last year, and there is a feeling of confidence in the trade that there will be a steady improvement in business conditions from now on. It is quite true that in some lines of trade, the seasonable movement is lighter than a year ago, and that orders and inquiries are not as large in volume, nor as pressing as is usual when the winter shows signs of breaking up. The hardware trade appears to have suffered less than many of the other trades. Retail hardware merchants in particular, in many parts of the country report that business with them has not been affected by the money stringency, and that sales have kept up well. Particularly pleasing reports come from hardware merchants in the smaller towns and cities in Ontario and the East. Hardware and Metal has interviewed a large number of prominent men identified with the trade and all express confidence in the future, and believe that although it will not come by leaps and bounds, there will be a sure and steady improvement in the business situation.

In the metal markets business is admittedly quiet at present, but nevertheless a good feeling exists, and metal merchants are looking forward to a brightening in business before long. The Financial Post in commenting on the business outlook, says in part:

There are one or two hopeful signs—or signs that are usually taken to be indicative of better times. Our banks, for instance, are accumulating cash, and Ontario investors are absorbing a large volume of municipal securities. Private buying of low-priced but high-grade securities, has been very satisfactory and very soon the institutions will be compelled to come into the market for the same class of securities.

The demand for mortgage money has dropped appreciably, hence our institutions will very soon have to get other employment for their funds. This is usually a condition precedent to business activity. For some years mortgage demands have been heavier than the supply of money, and there now exists a condition of monetary ease in that respect. We cannot but regard this as a good omen in so far as the hope of better business conditions are concerned. A few months ago the demand for mortgage money was acute; it is now dull. It should be borne in mind, however, that the immigration movement has commenced. Already the migration from the United States to the Canadian West has commenced. Ontario farmers are themselves taking steps to secure laborers from Britain. These are but indications that the usual immigration movement will take place in the spring, though on the whole it will be less than in the previous year, but it will stimulate business, and to facilitate more business there will be ample funds.

Editorial Briefs

PESSIMISM is disappearing with the snows of winter.

* * *

NO ONE has placed a limit on possibilities—save only yourself.

* * *

WE ARE not measured so much by what we do as by what we get done.

* * *

OF BUSINESS the more you know about it the more you know there is to know about it.

* * *

THE ADVENT of Parcels Post has stimulated the Mail Order Houses to greater activity.

* * *

THERE WOULD be fewer failures if there were fewer men blocking the way to their own success.

* * *

SPRINGTIME is Paint time. What have you done to assist in expanding your paint sales this Spring?

* * *

FAILURE is more often due to a want of ideas than to a want of capital. Study your trade paper for new ideas.

* * *

YOU might as well chain your body to a stake as to chain your business to an immovable and unchangeable policy.

* * *

SALESMANSHIP is the fine art of making the other man feel the same as you do about the thing you have for sale.

A PIECE of merchandise without a price ticket is a dead, meaningless thing—but with one—it becomes an answer to an unasked question.

* * *

JUST BECAUSE a merchant knows how to conduct a big store is no reason why he should not learn some new and fundamental things about a small one.

* * *

WHEN you stop fighting your neighbor and combine your energies to defeat the common enemy you will make progress toward better local trade conditions.

* * *

THE WORSHIP of Precedent is the death of Business. If the old method is unsatisfactory or out-of-date, adopt a new one. If at first you don't succeed, try again.

* * *

DISPLAY your goods where people can see and examine them. Goods hidden away might as well be in a foreign country so far as their direct appeal to a customer is concerned.

* * *

DON'T FOOL yourself. Your real competitor may not be the fellow across the street. It may be right in your own store, in your method of doing business, in your salesstaff, or the indifferent manner in which the wants of your customers are looked after.

A Hardwareman in Foreign Lands

A Hardwareman in Foreign Lands — An Account of a Trip Around the World of a Well-Known Merchant of Lindsay.

SOMETHING ON THE HARDWARE BUSINESS IN OTHER COUNTRIES.

A view of the great pine tree at Karasaki. It is 1200 years old.

THE merchant needs the broadening influence of travel quite as much as the author, the artist and the professional man. By getting abroad and seeing how things are done in other lands, he gains new ideas and learns to regard his own business and the problems contingent thereto from a new angle.

It was partly with this in mind and partly to enjoy a much-needed rest that a party of four business men from the town of Lindsay, Ont., decided to make a tour around the world. One of the quartette of globe-trotters was Dan Cinnamon, hardware merchant, a past president of the Ontario Retail Hardware and Stove Dealers' Association. Mr. Cinnamon has given some facts relating to the trip to Hardware and Metal, and the story of the wanderings of the party is appended.

The party consisted of Mr. Cinnamon, A. L. Campbell, grocer and president of the Lindsay branch of the Retail Merchants' Association; J. D. Flavelle, of the firm of Dundas & Flavelles, dry goods merchants, and G. H. Hopkins, a lawyer.

They sailed on March 12 on the Victorian for Liverpool.

Here they transhipped to the Empress of Russia, and sailed on it all the way around the globe to Victoria. The advantages of a trip without change will be clearly apparent to anyone who has travelled and learned the trouble of moving luggage and getting on a basis of mutual satisfaction with new stewards, etc. The Empress of Russia was being sent out to travel the route from Hong Kong to the B. C. coast, and the C.P.R. sent it to Pacific waters via the Suez Canal. Thus the passengers who shipped for the trip enjoyed the advantages noted.

But a travel story can best be told in chronological order, and it will be necessary, therefore, to start at the very beginning of the trip.

A view of Mr. Cinnamon, taken as the boat approached Victoria.

The trip across the Atlantic was very rough and foggy, and most of the passengers were confined to their berths for the greater part of the time. Mr. Cinnamon was lucky enough to escape with one day's disability, and even then he was not reduced to what might be termed the abject stages of mal-de-mer. On the third day out he was up on deck as steady and sure on his sea legs as an old salt.

They arrived in London on Easter Sunday and stayed until Friday of the next week, and not one minute of the time was idly spent. At that the party were so busy that they had little time to investigate retail conditions, although Mr. Cinnamon visited a few of the best ironmongery establishments.

At this stage it should be mentioned that, although the trip had been planned to combine business with pleasure, inasmuch as occasion was to be taken to inspect business methods and conditions, the pleasure part was given the upper hand. "There were days on end," says Mr. Cinnamon, "when I didn't think of hardware once."

Not Doing Too Badly.

However, he kept his eyes open during the short time that they spent in England and gained some insight into merchandizing conditions. The impression that he carried away was that the English merchant, particularly the ironmonger, is not doing too badly in point

of profits, despite what one hears to the contrary. For instance, an English ironmonger joined the party at Liverpool. He had been in business in a small town near Liverpool for fifteen years, and had retired on what might conservatively be termed an ample competence. His business had not been a large one as compared with the average Canadian store.

After doing London, the party ran over to Paris and spent several days in the gay French capital. They were astonished to find people rowing on the ponds in the parks with their coats off, for on leaving London the weather had been very foggy and damp.

Paris Stores Magnificent.

Mr. Cinnamon was mightily impressed with the Paris stores. He found them palatial in their appointments and equipment, dazzling in the high quality of the stock carried, and unique in the service offered.

The hardware stores were very good, carrying large stocks and offering at prices which in the main were quite reasonable. They found that they carried plenty of English and American-made hardware.

Proud to Belong to Empire.

Returning to London on the following Monday via Bologna and Folkestone, they met with two experiences which they will never forget. The first was a London fog of the real, thick, drizzling variety—a fog which enveloped the city like a pall, cramping traffic effectually.

The second experience was a view of the funeral of the late General Wolseley. It was attended by representatives of practically all British regiments—the very flower of the Imperial military.

"It was an awe-inspiring spectacle," declared Mr. Cinnamon," to see the seemingly endless rows of soldiers streaming past—men of magnificent physique, symbolizing the immensity and the might of the British Empire. I tell you, it made me proud to belong to the Empire, with a deeper pride than I had ever felt before."

Small Party on Board.

The passengers for the round-the-world trip assembled at Liverpool about two hundred in all. Only first-class passengers were carried so that the usual crowding was missing. The Empress of Russia sailed from Liverpool on April 1.

A view of the party at the bottom of the Hoodzu Rapids.

Women Deadly Gamblers.

The first stop was Gibraltar, where the better part of a day was spent. Next port of call was Monaco, and of course, all the party took a trip to the Carino at Monte Carlo. Some did not know that the laws of the Kingdom of Gamblers anent dress are very strict and went with soft collars. They were refused admission. At Monte Carlo one cannot gain entrance in the evenings unless in full dress and proper credentials. A substantial letter of credit would probably pass muster as credentials.

Mr. Cinnamon became convinced of the truth behind one of Kipling's most recent poems, in one respect at least. The female of the species is more deadly than the male when it comes to a question of gambling. The tables were crowded with women for the most part —women from 40 to 70 years of age. They play hard do these female habitues of the Casino, as their drawn faces and tense attitude attest.

A Heavy Toll.

The Empress of Russia was the largest ship that had ever gone through the Suez canal and its advent was regarded as quite an event out of the ordinary. All other shipping had to be suspended and the manager of the canal himself went through with them. The toll paid for the trip was $12,500; rather a staggering amount—so large, in fact, that the passengers could hardly credit it at first.

A study in contrast—A gunboat at Shanghai and a Chinese dhow —The latter is the same type of boat that the Chinese have used for centuries.

The passengers left the ship for visits to Cairo, the Pyramids, and the Sphinx. The return trip to Suez by railroad was the hottest time experienced. It was so hot that when the boat approached Aden, which enjoys the reputation of being the warmest spot on the globe, the passengers were relieved to hear that no stop would be made there, one of the rather frequent plagues having broken out.

Through the Indian Ocean.

The trip through the Indian Ocean brought out many interesting points. At nights the Southern Cross was to be seen and much surprise was aroused by the sight of the Dipper upside down. The tropical nights in fact were a source of continual wonder and delight all through this part of the trip.

The ship was surrounded by flying fish at all times but, strange to say, never once was a shark seen. Mr. Cinnamon's theory for this phenomenon was that there was too much competition. Included in the party were quite a number of real estate men who presumably were taking the trip on the strength of the 1912 real estate boom. This theory found general acceptance with the rest of the company.

Ceylon was the only part of British Indian possessions touched. The trip to this island which is probably associated in the mind of the average Canadian with tea, proved one of the most interesting of the whole trip. Mr. Cinnamon took considerable interest in visiting the cinnamon groves which abound on the island, this being one of the staple products of Ceylon.

It is said that a wild animal could go from one end of the island of Ceylon to the other without once touching ground, so dense is the undergrowth.

Mr. Cinnamon and party shooting the Hoodzu Rapids, near Kyota, Japan.

Nearly Missed the Boat.

An amusing incident occurred at Singapore. One of the lady passengers took a gold piece from her purse while looking for a small coin to pay a native guide, and the latter promptly grabbed the coin and ran. He was caught by a native policeman, and the lady was notified to appear next day in the police court. Quite a party from the boat accompanied her to take in the proceedings and were rewarded by the sight of a dignified tribunal presided over by a darky magistrate, who seemed determined to take advantage of this opportunity to show off before the distinguished visitors. For two hours the court proceedings dragged along without anything being done but with much ceremony. Knowing that the steamer was due to leave at 12 o'clock, the party grew nervous and finally at 11.30 the services of an interpreter were enlisted and the pompous "beak" was petitioned to get down to cases. The prisoner was then brought up, deprived of the filched coin and sentenced to thirty days hard labor, all in the space of two minutes. Just as the party reached the ship, the gangway was being drawn up for departure.

A view of a hardware store in Kyota, Japan, taken by Mr. Cinnamon.

Hong Kong Architecture.

A noticeable feature in Hong Kong was the general style of architecture. The buildings fronting on the main streets, particularly the stores, are two-storeys in height with large open porticoes in front on both floors. The result is that the buildings get plenty of light and air. This same idea he found was being worked out to a modified degree in a number of European countries.

The Stores of the Orient.

Mr. Cinnamon paid considerable attention to the hardware stores of the Orient and was literally amazed at the size of the stocks carried. The average store is very long and narrow. Sometimes there would not be a frontage of over ten feet but the store would run back two hundred feet. And the amount of stock piled into the space was almost inconceivable. Such lines as pipe are literally carried in carloads. This is probably due to the fact that the Oriental hardwareman has limited facilities for getting stock in and must order in large quantities.

To walk through the typical hardware store of the East it is generally necessary to squeeze along through piles of stock. Any attempts at orderly arrange-

A "spicey" view—Mr. Cinnamon standing beneath a cinnamon tree in the cinnamon gardens at Colombo, Ceylon.

ment or display are absolutely lacking. In cases where the street is only 6 feet wide, one wonders how the stock, particularly the long lengths of pipe could be removed from the store; and, more remarkable still, how they were ever worked in in the first place.

China is starting to manufacture hardware to no small extent. Going through one of these jumbled alleys which are called stores, one finds many objects which even a thorough-paced hardwareman will not recognize at first glance. For instance, Mr. Cinnamon bought a padlock in Canton which is certainly constructed on an unique plan, but which undoubtedly serves the purpose of a padlock. It is constructed of two separate parts, one of which fits into the other, automatically locking it. The cost was fifteen cents!

The rickshaw—the street car of the Orient.

A Comparison of Rates

A Comparison of Canadian Parcels Post, Canadian Express Rates and American Parcels Post Rates.

THAT the Canadian Parcels Post rates are considerably lower than express rates is apparent from a comparison of the rates. This applies particularly to parcels under ten pounds for places within about 150 miles of the mailing point, while in all long distance parcels there is an advantage in Parcels Post.

In the current number of Industrial Canada there is given a comparison of the Canadian parcel post and express rates. To this has been appended, in each example, the rate which would be imposed under the regulations of the United States system for parcels of a similar size. This shows that in the vast majority of instances the United States rate is by far the lowest. It must be remembered that in that country the limit of weight for the farthest points is 20 pounds, while within a radius of 150 miles the limit is 50 pounds. Then, too, there is a special local rate for delivery in the same place, and the rates for the first and second zones, which include a radius of 150 miles, are slightly lower than the Canadian rate for parcels of same weight.

FROM TORONTO, ONT

A Series of Seasonable Window Displays

An Article on the Value of Window Displays Showing Illustrations of Six Displays Which May be Used at Various Seasons—A Plea for the Window Trimmer.

Written For Hardware and Metal by A. T. Black, of the Martin-Senour Co.

WE frequently hear it said and not entirely without cause that this is an age of materialism. True it is that in the race for dollars which seems a necessary pursuit for us all, many new departures from old-time custom, and advanced methods are in evidence to keep ourselves in the running.

It is said, and with some degree of truth, that sentiment, friendship, old-time connection and standing are cutting less figure in the business world every day. It is not a sufficient guarantee of future success for a merchant to be resting on his oars, buoyed up as it were, with the feeling of confidence from the knowledge that he is well known, of knowing that his place of business is and has been a centre of attraction for years gone by, and that it is bound to continue so for all time. Some merchants have been conducting businesses which have been handed down to them through two or three generations and they are enjoying the patronage of succeeding generations of buyers.

No special effort has been put forth to retain this patronage. Old stand, old fixtures, old methods, and all developed into old-time custom and habit. But a day of awakening was bound to come. The alarm clocks in these instances sometimes are found in different forms. It may be through the advent of a new dealer who comes in with up-to-date aggressive methods or perhaps the earlier awakening of some older competitor, whose existence and ways had been overlooked and despised. The inevitable result is that our Mr. Old Time Merchant finds some of his old-time friends, breaking away from their old-time custom of dealing at his old-time store. I would not like this to be construed to mean that the personal touch in business and the friendly relationship and confidence between seller and buyer is to be minimized for they play a very important part in the success of any business.

Many merchants content themselves with the knowledge and also advertise the fact that **they have the goods and their prices are right.** These, of course, are quite essential and the very foundation of a good business, but what are these same merchants doing to rear a splendid structure above these foundation stones? Honest dealing, courteous treatment, prompt and efficient service, good bookkeeping coupled with a sound credit system are all stones which should find a place in this structure, but something else remains and it is to that which remains that the writer wishes to devote these few lines.

Some may take issue, and with good cause too, that this is an age of materialism but all must admit that it certainly is an age of "Show Me." People want to be shown. Seeing is believing and it's up to the man who has goods to sell to show everyone what he has for sale, to show it in the most attractive manner, and show it at the proper time or season.

Now the proper time and season for the display and showing of certain lines of goods is a matter worthy of more than passing or haphazard consideration.

Everybody knows that skates and sleighs and winter sporting goods should be shown in the months they are used in, and not July or August. Likewise a display of screen doors and windows just before or during the fly season is preferable to the winter months. Snow shovels are not usually in demand in

Window Display of Sporting Goods by A. T. Black.

June Wedding Gift Display Arranged by Chas. Byford, with Bond Hardware Co., Guelph.

July nor yet lawn mowers in January, but there is just the possibility of a merchant in arranging his goods in seasonable displays to sometimes cut the season too short for certain lines.

This is often brought about by lack of main floor space, and therefore the store room or back shop becomes the resting or will I say hiding place of saleable articles long before their season has expired, or on the other hand new lines are kept in a like place until too late, and the early season sale has been lessened on account of not having been given an earlier showing.

Again there are an increasing number of lines sold in hardware stores which were formerly looked upon as only short season sellers, and have become all-year-round sellers. This condition is entirely regulated by the dealer, by the length of time he displays the line, and as to whether he gives such lines prominence for only part or all of the year.

To instance a couple of lines in particular a few years ago the sale of silverware and fine cutlery by the hardwareman was to a large extent accomplished at the Xmas season, and the dealer was disappointed if he did not pretty well clear out of this line then, as he did not figure on giving it any prominence during the balance of the year. I remember quite well of an occasion when a very prominent Eastern Canada dealer when in attendance at one of the hardware conventions in a western Ontario city, visited one of the local hardware stores which had recently been remodeled and refitted. In offering his criticism of the arrangements, which were solicited by the management, he did not approve of a large 14 ft. silent salesman, filled with silverware and occupying prominent space directly opposite main store entrance. He based his objection on the ground just mentioned, that it was only sold for a very short period at the Xmas season and was dead the rest of the year, and was, therefore, taking up too valuable space. He was, no doubt, basing his opinion on his own experience of how he treated this line. "As he had sown, so had he reaped." He apparently kept this line buried for eleven months out of the twelve, and usually buried things are dead.

Now as a matter of fact the great bulk of the silverware trade is to-day being done by the hardware and not by the jewelry trade as in years gone by.

There is no doubt that this change has been brought about to a large extent owing to the better facilities provided by the hardwareman to give the line a good conspicuous showing the entire year round. Hence it is a pretty tame hardware store which does not have a silent salesman nicely stocked with a line of silverware. As a paint man I make no apology for making mention of the other line, that of ready-mixed paints and varnishes.

Not many years ago a general survey of the hardware stores of the country would have found this stock under the counters, or under the floor (in the cellar) or shoved into some out of the way place. A few cans were brought forward and placed on the counter during the spring house-cleaning season. It was looked upon as a short season seller.

What do we find to-day? This, at least, in the case of the dealers who are doing the biggest business and getting the best out of the line. We find the paint stock occupying the most conspicuous place in the store, usually right at the front, and not just for a portion of the year but for the whole year round. In conversation a few days ago, with the members of a firm whose store arrangements I had always looked upon as being very fine, and whose paint stock arranged on special shelving about the centre of the store was a model of neatness and good taste, they expressed themselves as being in favor of and have planned to move their paints to the very forefront of their splendid store. And you may believe it, they will experience the same results as many other dealers who have done likewise when increased sales will accrue.

These are but two of many lines which the dealer cannot afford to bury for any portion of the year.

This question of the proper goods to display in certain seasons cannot be decided by a reference to your experience as to whether you have call for them or not. There may be numerous articles you do not have call for because you have not got them displayed and your compefitor having the article on view has the call and on those occasions he has the call over you.

It's a shame the way that hackneyed phrase is used, "We have no call for it." Its the refuse of the short-sighted buyer who only wants to buy what he has call for. He never thinks of buying a line which he may be able to help create the call for. Instead of having it, they display cards like these:—If you don't see what you want ask for it, and if we haven't got it we'll get it. Instead of having the call for it, he is more likely to get called himself for not having the article. In fact, the merchant who only buys just what he has call for, may soon find that calls on his place of business are growing less numerous. Some merchants will argue that appearances don't count for much, but let some seedy looking, run-down-at-the-heel-looking individual approach him and try to sell him gold dollars for ten cents and he will put his hands in his pocket and back away. Appearances are against his would-be benefactor.

Appearances certainly do count for something and, Mr. Merchant, they count for a great deal in a business way, in the general appearance of your place of business, in the tidiness and arrangement of your stock and the attractiveness of your displays.

The evolution of the hardware store from the status of the iron-monger's shop to the modern well equipped sales emporium of to-day has been of but a few years' working.

In no other line of business has a more marked change and improvement been shown in recent years than in the altered appearance, both interior and exterior of the hardware store. Appearances do count for something as I am sure every merchant can vouch for who has made any of these changes. What a great handicap many well-stocked, centrally located stores are laboring under solely on account of poor window display facilities or lack of attention to this very important feature of modern merchandising. Store windows should serve two purposes. They should help supply sufficient light for the interior, but this can be provided for artificially. The important work of the store window is to attract and rivet atention, and every window dresser should keep this important question in mind when arranging his windows. Will it attract attention? The window of the hardware store is the real weathercock for the buying public to judge whether you are giving attention to the seasons in the display of your goods. The window is a fine place to show the goods you were afraid of having no call for.

Merchants spend quite tidy sums on newspaper advertising which is money well spent, but it's not easy for them to know what proportion of the public are reading his ads. and harder still to just figure what return you are getting from this outlay.

But let the same merchant dress a window attractively and price-card a line of goods he is anxious to push, and find after a few hours his window all shot to pieces, the goods gone, the money for them in his cash drawer. It's not hard to figure where the credit belongs. Notwithstanding this the windows are not always made the best use of. Should the newspaper fail to go to press for some days, or that ad. space which you have contracted for by the year, be blurred, the merchant would be up in the air looking for a rebate from the printer.

But how about that window standing empty for two or three days at a time with nothing but a step-ladder, a pail of water and a sponge showing?

Are you treating this window display job just as a rainy day pastime, or a fill-in job when there are no more nails left that need polishing? If you are, you are neglecting one of the best promoters at your command in the race for dollars.

But if on the other hand you are using your window space for bright attractive displays at suitable times and seasons you are doing a great deal to set the tongues of the public wagging and it makes pretty good publicity for you. When you are worrying about the num-

Display of Tools Suitable for all Seasons, Arranged by A. T. Black.

A Fall Window Display of Sporting Goods Arranged by A. T. Black.

ber of people you reach through the medium of your daily paper, do you ever try to figure out the proportion of the public you appeal to through your windows?—that is, of course, if they are serving the purpose they are intended for, the purpose of attracting.

Do you think it an extravagant estimate to say that 75% of the people of your town come down town, and are within seeing distance of your windows at least once every week, while quite a large percentage of the people are in the same position even every day. Are you attracting them? They may be within seeing distance of your windows and still never take a look, and that is just where the ingenuity and art of the window dresser should be brought to play to make his windows so attractive that they simply can't help but look and when they look they take another look; and soon there's crowds on the look and you bet it looks all right.

Thanksgiving Window Display Arranged by Chas. Byford.

The accompanying window cuts herewith shown are but a few of scores of equal merit all shown in the windows of one store. Window displays of this kind have played and are playing an important part in the business done by this store. So many dealers have only looked upon one season of the year as being worthy of any special effort, and they have concentrated their efforts entirely on a display for the Xmas season, made one grand splash as it were and then "good night" for the rest of the year.

Some dealers have made it a practice to show a tool window and a paint window at least once a month during the whole year. There is no line that will give the dealer better returns and quicker realized ones than a good showing of tools. It's almost impossible for any man to get past a good tool display without looking at it, and the mechanic himself is as crazy over tools as kids are over candy and women are over sky pieces.

A paint window is possibly the easiest to arrange and the most attractive of them all, because if you are handling a good line of paint, made by a live firm you get more help in the way of display and more real sales promotion material than with any line in your store. Such displays are bound to encourage the clean-up and paint-up spirit which should be abroad in the land more especially at this season. The window and the store is the place for the arrangement of this display matter, not out in the barn on the walls beside old Dobbin. Dobbin will be there or thereabouts when it comes to deliver the goods.

Then there is the seasonable display to catch the eye of the people who have been honored with an invitation to some dear's wedding, and with the honor comes also the pleasure of getting soaked for a gift. You be right there when the soaking is done. The June Brides, don't forget to have a special display for them.

Then there is the Thanksgiving season, when a well-arranged display of cutlery will bring good results. You must not forget your courtesy to any of your friends even the turkey for whom the least you can do is to provide a good sharp knife. Then the baseball-hockey-lacrosse-football and different sport seasons, when you can build on washing your windows every day for the boys will be there forty ways, with that index finger pointing at the one mitt, they are going to get when they save up.

Don't be classed as a poor sport by not making a good showing of these lines. Then there is the Fall hunting season, when an effort should be made to make the window look as much like a piece of real nature as possible. In doing so nature will come to your rescue. Gather up the beautiful leaves, the boughs of some trees, and arrange a babbling brook, and some poor city hemmed-in chap, will just naturally come in and demand a gun and take his heels off to the woods.

Don't forget to see that he has the bullets. The Xmas season—enough said, everybody does something special for Xmas.

Then there is all our national and civic holidays, and special events now and then when appropriate window displays can be made in keeping with them.

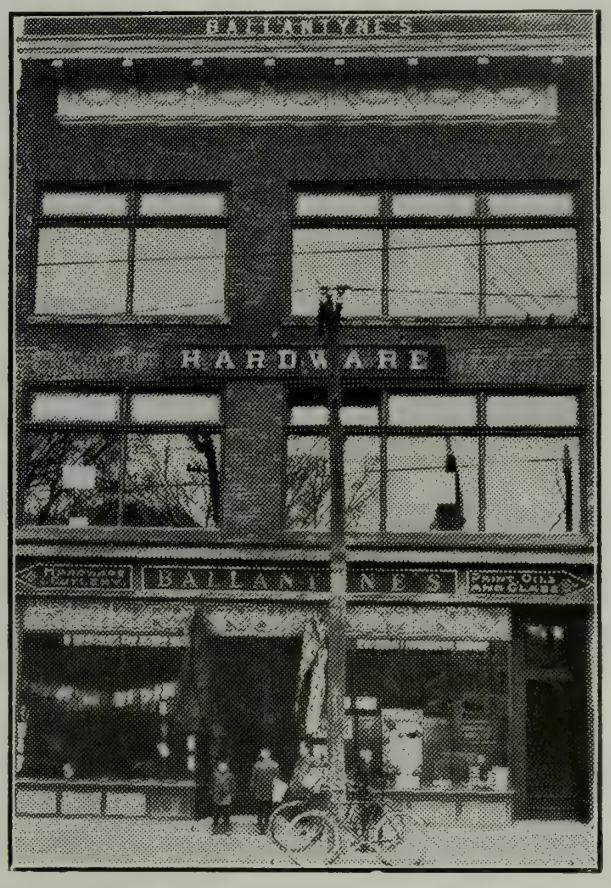
Some of the most excellent displays I have ever seen have been arranged from stock lines of the very ordinary variety.

A Plea for the Window Trimmer.

In closing just a word on behalf of the man behind the gun, the window dresser, the fellow who generally has to wash the glass, shovel the snow, and do several other things first, and dress the windows at night when he should be asleep.

Mr. Merchant if you have an employee who has some talent along this line of window display work, allow him to develop it, and encourage him by giving him time, and a little loose change to buy something outside of the store that would help in the making of his display attractive. See if you can't arrange to give him a little uninterrupted period when he can concentrate his attention on some plan of procedure which he may be trying to follow.

I can only express regret that of recent years this consideration and discussion on window dressing has not found a place on the programmes of any of our trade conventions, and I trust that it may in the future receive the attention of which it is worthy.



Fall Paint Display Arranged by Chas. Byford.

The Selling Power of a Broad Selection

New Hardware Arranged With the Idea of Showing a Wide Assortment of Goods—The Same Idea Followed Out in Window Trims—A Description of a Very Practical and Complete Store.

"WHEN planning my new store I decided that one feature would not be overlooked. I wanted to have plenty of space to show a complete assortment of goods. I believe that nothing is more conducive to sales than showing a good assortmnt."

The speaker was Alex. Ballantyne, hardware merchant, of Brantford, and he was showing a representative of Hardware and Metal through his new store on Colborne Street. There were evidences on every hand that Mr. Ballantyne had succeeded in his purpose. The store is large and roomy, and every available square inch of space is in use. The supporting pillars down the centre of the store are used for round fixtures to show household goods. Even the registers are used to support fixtures. And the result is a most comprehensive showing of hardware. Not only are practically all lines of goods prominently displayed, but a good assortment of each is shown.

Exterior view of Ballantyne's store.

Mr. Ballantyne does not believe in the sale-by-sample theory. He believes that a customer, say, who wants a hayfork, will be impressed if he sees that the store carries a large stock and assortment of forks. To show him two or three forks is not as effective as to let him see twenty feet of wall space literally covered with forks and other implements of a like nature. Accordingly, when one visits the part of the Ballantyne store where goods of this class are kept, one sees a lengthy section of wall space given over entirely to the stock. The effect is to convince the customer that the trade done in this particular line is big, and that the best facilities for selection are offered. It is probable that all hardwaremen will agree with Mr. Ballantyne on this; even those who have not the floor space to make it possible to put the theory into practice.

Before proceeding with a detailed description of the store, it should also be mentioned that the same theory is carried out by Mr. Ballantyne in arranging his window trims. His idea is to make a big showing on some one line by putting a complete assortment on view. Therefore, the window displays are made up of one line only—mixed displays are never attempted. If it is bath-room mirrors that are to be shown, nothing but bath-room mirrors are allowed into the window. The result is that all who pass the store are impressed with the idea of mirrors. Comparatively few will need a mirror then, but everyone will think of Ballantyne's when they need mirrors in future. The fact has been impressed upon them that mirrors of this class are sold in the Ballantyne store.

The one-line trim policy is adhered to most rigidly. Even where a comparatively small article is decided upon, the whole window is given over to an assortment of that line. When the representative of Hardware and Metal was in the store one of the windows was given over to pliers of all sizes and descriptions. That the size of the assortment had had the desired effect was emphasized in a rather humorous way.

A man entered the store and said to a salesman, jerking his thumb in the direction of the window:

"Guess there'd be one in the lot that would take hold of a tooth, wouldn't there?"

"Yes," said the salesman. "But look here——"

"Toothache," explained the customer, tersely. "Want to get one of 'em out, but can't get anything to grip it strong enough. I thought a pair of fine pliers would do the job."

They picked out a pair that promised to exercise sufficient grip, and the customer departed with them.

That's the result of showing an assortment.

Description of Store.

The accompanying photographs give a good idea of the general lay-out of the new store, but a detailed description will be of interest. A number of unique and valuable ideas have been worked out.

To the right on entering is the tool department. All lines are sampled on the outside of the boxes. The saws are shown on hooks without glass. At first glass doors were used to cover the saw stock, but they were removed, as Mr. Ballantyne believed that the goods showed to better advantage.

The drawers beneath the shelving are arranged with different depths, the lower extending out about six inches below the upper. These serve as steps, by means of which the salesmen can reach goods on the topmost shelves without having to use a ladder.

The Paint Department.

The rear section of the wall shelving on this side is given over to the paint stock. Here a complete stock is carried, although a more prominent position is given to what might be termed the domestic paints—interior finishes, stains, varnishes, etc. This stock is carried on the opposite side of the store

Interior view of Ballantyne store, showing paint department at right.

close to the front, where it is displayed to the very best advantage. No one could enter the store without seeing the paint stock; a contingency which might easily occur if the whole department were placed at the rear.

Household Goods.

The accompanying plan shows the general arrangement of the goods, so that detailed mention is not necessary. Attention is directed, however, to the rear section of the store, which is given over largely to household goods. This department, in fact, is one of the largest in the store, and a wide variety of stock is shown, ranging from the smallest of tinware to washing machines.

The position of the household goods department at the rear is a strategic one. There is ample space for the proper display of the goods, and this section enjoys a certain sense of isolation. The salesman can show goods to a customer free from interruptions.

The featuring of household goods has been found profitable in every sense of the word, as it interests women and gets a share of their trade; and every hardwareman is now fully alive to the importance of attracting the trade of the women.

Some Good Ideas.

Some of the particularly good ideas embodied in the store might be enumerated as follows:—

Leading from the door at the side, as shown in the plan, is a runway to the cellar. This idea was worked out by Mr. Ballantyne to avoid loss of time in getting goods to and from the basement. He did not want to put in an elevator, but at the same time realized the labor and time consumed in carrying goods up and down a stairway. The runway descends at an easy grade, which makes it possible to use trucks and wheelbarrows.

The rope stock is stored in the basement beside the centre stairway. Strands are run up through the opening provided by the stairway to a space on a main floor beside the stairs. Thus sales can be made without taking the customer downstairs.

Circular fixtures have been erected around all the store pillars. These are used for the display of such lines as lanterns, sweeping compounds, hockey sticks, etc.

Colors are kept in large bins along the rear of the store.

The door leading to the runway is kept very finely stained and grained. When customers ask about graining, they are taken back to inspect this door, which was done in a very brief space of time by a member of the staff. The ocular proof thus provided serves to clinch many a sale of material and graining tools.

Store is Very Light.

An outstanding feature of the store is the splendid light provided in all parts. The windows at the front admit plenty of light, and the rear of the store is practically one expanse of glass. Thus the lignt has a clear sweep through the store.

"We have got as far away from the old idea as we could," explains Mr. Ballantyne. "I don't think you can have too much light in a hardware store."

The Value of Service.

The chief idea behind the merchandising policy of this energetic hardwareman is service. He believes in giving his customers the most prompt and courteous attention, in delivering promptly, and in looking after complaints quickly.

With this object in view, he stays as much as possible in the front of the store, greeting customers and seeing that they are waited upon. In doing this he has another object besides the personal supervision of service. The average customer likes to see the proprietor, and even more to be seen by him. When a man gives his trade to a certain merchant he wants that merchant to know it, to appreciate it. In other words, he wants credit for the custom he is giving. A nod of greeting from the proprietor goes a long way toward keeping the regular trade of a customer.

How to Arrange a Window Display Background

A Correct Background is an Important Feature—How the Same Background Can Be Used for Different Displays.

Written for Hardware & Metal by C. H. Smith, of Ashdown's Retail Store, Winnipeg.

IN all the lines of trade, there is probably none in which window trimming will yield greater returns than in the hardware trade, and the up-to-date hardwareman of to-day should take full advantage of this splendid advertising medium.

No one will deny the advantages of advertising, and the window display is the most direct and profitable form of publicity at the command of the retail merchant. It is a well-known fact that any show window on a principal street has a greater "circulation" than a local newspaper. That is, more people will pass the window in a day than will read an ad. in a newspaper.

There are still a few merchants who do not make the proper use of their windows, but in most cases being outclassed by their more up-to-date opposition. The real live hardwaremen of to-day are wide awake to the great advantages of window advertising, and are reaping benefits from it.

There are many hardwaremen whose idea of window trimming is to build in their window a locomotive, battleship or automobile out of hardware. This is all right if you want to have a crowd around your window, but just stop and think, how much hardware does it sell? That is what a window display is for. The passerby will stop and wonder at the ingenuity displayed in making this battleship, but it will not likely bring him in to make a purchase. It is a common mistake to judge a window display by the crowd that is in front of it. Any kind of a freak in a window will draw a crowd, but it won't sell goods. The novelty window is all very well once in a while, but they should be kept as far apart as possible, as they don't bring results in sales.

Another common mistake made by many is to crowd a window full of articles which have no relation to each other. A first-class salesman does not try to talk about twenty different lines at the same time, neither should a window try to show too many lines at one time.

The first thing to be considered when preparing for a window is the background, as this is by far the most important feature of a window display. Get a good background, and the window is found to be attractive.

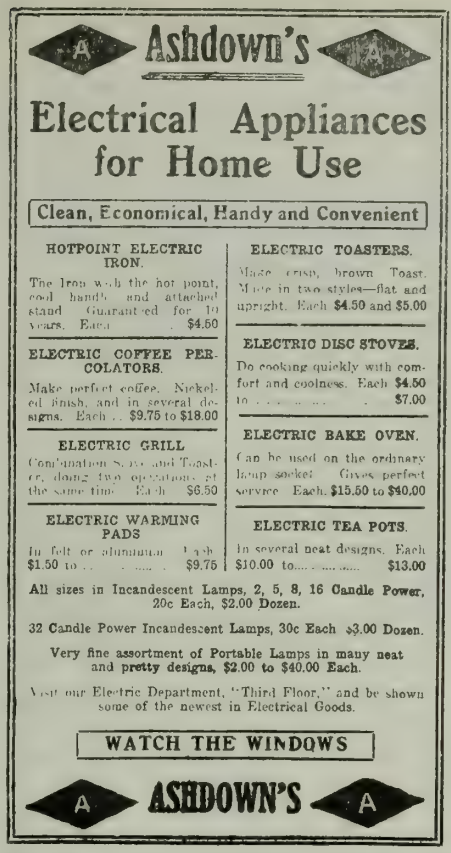
The background should always be planned ahead, and it is wonderful the many and attractive backgrounds that can be made by different means.

Beaver board is used a great deal, and can be cut in different shapes and is easily handled. Another advantage is that it takes paint to great advantage, flat paints being the best for windows.

Lattice work made up in the form of arches or trellis work is another good thing for backgrounds. The lattice work is best made out of strip, 1 inch by ¼ inch, and should always be painted white. Artificial flowers and vines are then fastened to the lattice, and can be used on the beaver board backgrounds. Do not use flowers too thickly, but place them neatly, and they will be much more attractive.

This style of background is especially attractive when used in displays of cutlery, silverware, brass goods, or fancy lines. The beaver board background, when made up in panels makes an especially good background for stoves and kitchenware.

In displays of tools, builders' hardware, etc., background can be made up from the goods themselves. This is done by taking a sheet of beaver board and covering it with sateen in some bright color, and then fastening the goods on by wiring them to the beaver board.

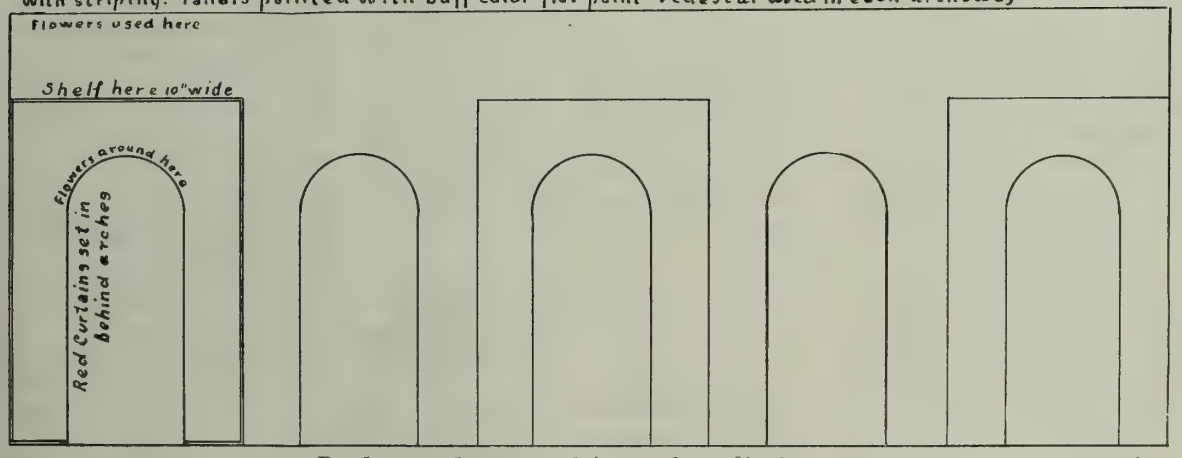


This background can then be carried into the window and fastened to the rear of same. A great many different schemes can be carried out in this style of background, as the sheets of beaver board can be cut into circles, ovals, etc., and look very attractive when covered with goods.

Window display of cutlery by C. H. Smith, showing background outlined in accompanying plan.

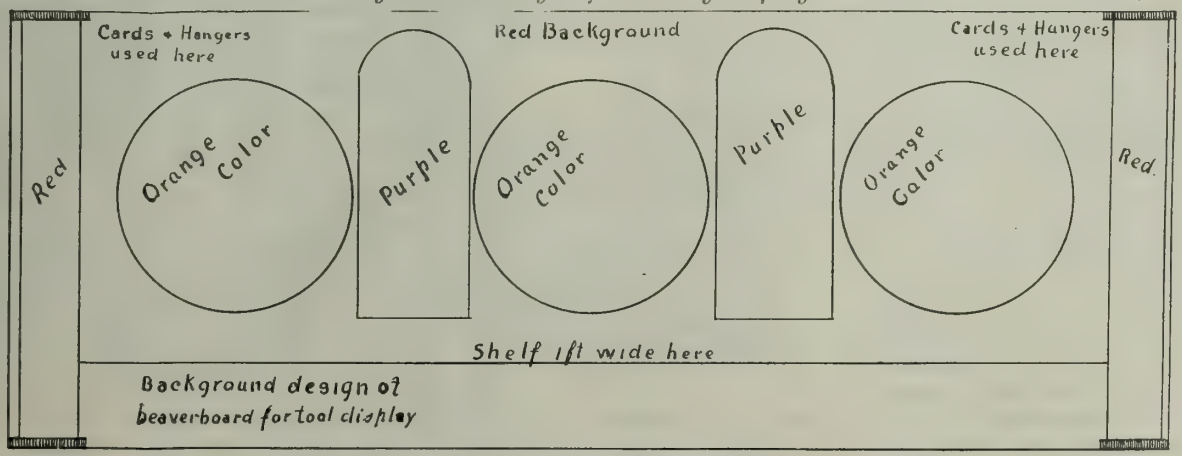
Frosted electric lamps also help to make your background better when used along the top or around the edges. Pillars placed at the ends or centre, and covered with flowers or vines, help to break an otherwise flat background. After your background has been properly placed, the next thing is the bottom of the window. This should first be covered with sateen to match your background or some color which will blend with it. Then to take a flat appearance from the bottom, pedestals can be used with glass shelves placed on top, or ordinary boxes covered with cloth. Pedestals made in various heights are probably the most useful fixture in window trimming as they can be used in almost every window display. The goods should be placed on the bottom in an attractive manner, and each article should be placed in a position where it shows to best advantage.

The colors and material used in window displays should always be well considered. Ordinary sateen is about the best material to use in most displays, and it can be bought in a variety of colors. Purple, red, white and orange, are colors which show hardware to good advantage. Velvet is an extra good material for use in displays of cutlery,



The firm always advertise, "Watch the Show Windows.

silverware, cut glass, etc., and gives a beautiful appearance to a display.



Another thing to be considered is the changing of displays. As a rule no display should be left in longer than a week. The writer trims thirteen windows, and changes every one of them once a week. A mistake a great many window trimmers make when an especially good window has been got up is that he thinks so well of it that he is inclined to leave it until it becomes stale. Make a regular rule for changing your windows, and stick to it. Your window is just as valuable as advertising space in a newspaper, and you would not think of letting the same ad. run for weeks, as you know it would be wasting money.

As regards results from window displays, it is sometimes hard to trace direct results from every window, but they are there just the same. Displays of household goods, shaving supplies, and electrical goods, bring the most direct results, and can always be noticed.

Last, but not least, see that your windows are kept bright and clean. This is one of the most important things in window trimming, as very often a very good display is spoiled by having a dirty plate glass in front of it.

Background arranged for cutlery display.

Same background slightly changed for tool display.

The Doorway of Adversity

How the Money Stringency Affected a Merchant Whose Sales Were Declining—Jolted Out of the Order-taking Rut and Taught How to Sell—Caught the Business-Getting Spirit

Written for Hardware and Metal by William Edward Park.

THE slump in sales was not merely a jolt for Alliston—it was a crusher. He could see now, what he had not appreciated earlier, that ever since the commencement of the previous autumn, business had been sagging downward. The Christmas season had not brought with it the old time steady increase over the year before; and now the three winter months, landing him on the threshold of spring, showed an actual decline. Ever since commencing business he had gone steadily forward; and this first check, coming as it did with vague general hints in the financial world of money stringency and curtailment of credits, was all the more disconcerting.

A customer entered. Allison glanced up.

"Pound of two-inch nails. Yes, sir." He weighed the nails and wrapped them up. "Fine day, isn't it Good morning." He rang up the sale.

The customer went out. Alliston, his elbows on the counter and his chin on his hands, pondered moodily. With a look of gloomy apprehension his eyes surveyed the store. Manifestly he was losing his nerve—the nerve that had first plunged him with practically no capital, into this business, and in the intervening five years had carried him along a pathway of unbroken prosperity.

Manning, at a nearby counter, was selling something from the seed box to Billy Wyckoff, the tailor. Alliston watched them indifferently. Manning rang up a five cent sale as Wyckoff went out. Alliston, his eyes on the seed box, let his mind race backward over a score of years. His father had taught school, and gardening was his hobby; and the hardwareman could still picture himself, a youngster in knickerbockers, helping while his father turned over the fragrant earth and planted the seeds. And those trips to the store down town to buy seeds—carrots and, beets and parsnips and——

"Manning!"

"Yes, Mr. Alliston." The clerk came with alacrity.

"What did Mr. Wyckoff buy just now?"

"Only five cents worth of lettuce seed. Hardly worth the trouble," concluded the clerk, with a grimace.

Alliston gazed at him queerly.

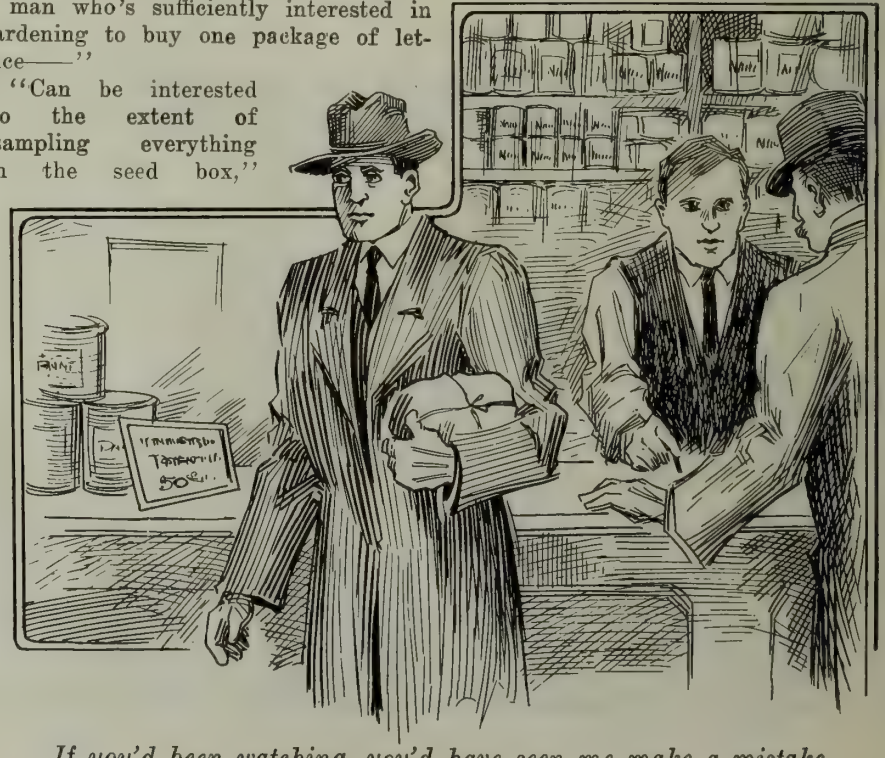
"You're right, Manning. There's nothing in small sales unless——" Pausing, he again eyed the clerk, a bright-looking young fellow with a well-satisfied manner. "Do you know, Manning, that sales are falling off?" he demanded, suddenly.

"I suppose it's the money stringency they're talking so much about. People can't buy so much when money is scarce."

"They can't. In the natural order of things they won't buy so much, either. But—can't we sell them more?"

The clerk looked startled.

"Were you watching me just now, weighing out some nails for a man? No? Too bad. If you'd been watching, you'd have seen me make a mistake and perhaps lose money by it. I can guess where the trouble is, Phil. We've had mighty good times here these last few years. The business has fairly come to us, almost without the asking. We've fallen into the rut of letting people buy things. We've forgotten how to sell. It's time for you and I and the rest of us to buck up. A man that's using nails in nine cases out of ten will be interested in saws or hammers, or maybe paint or varnish or brushes. And I never thought of it till—till I remembered that a man who's sufficiently interested in gardening to buy one package of lettuce——"



"Can be interested to the extent of sampling everything in the seed box," chimed in Manning, with a slight flush.

Alliston had never made the mistake, in his business career, of attempting to do the lion's share of the selling. As far as possible, he had given his clerks every opportunity to push themselves to the front, contenting himself with showing them how. And now he realized, suddenly, that his own slackness had set them a bad example. A quiet study of the other clerks during the remainder of the day convinced him of the correctness of his diagnosis. Most of the night he spent in planning—or, rather, trying to plan—some method of stirring them into action.

Coming down next morning, he found staring at him from the store window a striking showcard with this legend:—

"CUT THE COST OF LIVING BY GROWING GARDEN STUFF."

In the window was Benny Halligan hard at work. Benny's window-dressing aptitude had won him charge of this branch of the store's advertising, and now he was busy arranging a gardening display. Not merely garden seeds, but garden tools, hoes, rakes, spades, barrows, forks, and a host of other items. Pasted ostentatiously on the back of the plate-glass were newspaper clippings,

If you'd been watching, you'd have seen me make a mistake.

marked around with red pencil — clippings from current newspapers and magazines deprecating the vanishing of the old-fashioned kitchen garden, and pointing out how large a saving in money and health could be effected by the use of vegetables—especially fresh, home-grown vegetables—in the bill of fare. Half a dozen wayfarers were perusing the clippings. Alliston passed inside.

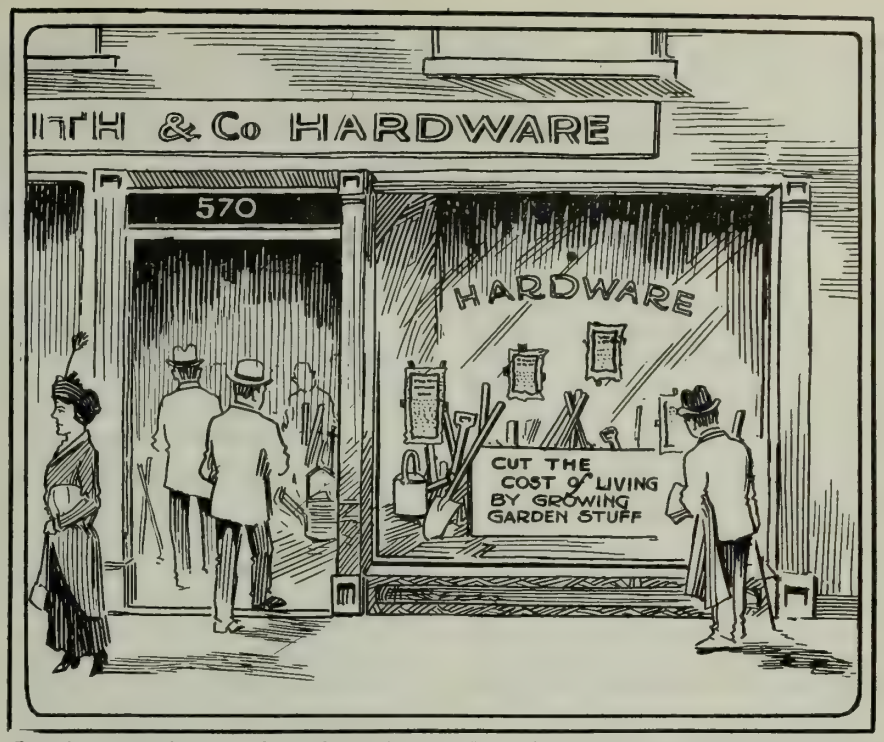
"Garden seeds," he heard Manning say to a customer. "Certainly. These are fresh, new, guaranteed to grow. Just let me help you to make a selection." He ran over a lengthy list of familiar vegetables, each affirmative nod being the signal for laying aside a package. "Have you ever tried salsify? You can cook it to taste like oysters, and it's a lot cheaper." He put aside package. "You'll need squash and cucumbers and string beans and the later stuff. You may as well buy it now, and plan your garden ahead."

The customer agreed. Alliston, moving in, caught just a few more words:—

"Have you a good set of tools? Now, here is a rake——"

The hardwareman retreated into the background.

"He came for twenty cents worth of seeds, and I made a three-dollar sale," explained Manning, gleefully, when the customer had gone. "How d'you like the window, Mr. Alliston? I told Benny yesterday what you said about bucking up, and I guess he lay awake most of the night thinking it over."



Except for Saturday's, that day's sales were the best since New Year's. A large proportion of the extra sales were due to the gardening display. That night Frank Winter, who had particular charge of the households, brought a new idea to Alliston.

"As soon as this display slacks up, I want Benny to put on another," he remarked. "Tell 'em something about saving foodstuffs by using modern cooking utensils. Now, there's a food-chopper. A woman with one of those can make all sorts of fancy things out of odds and ends of meat and vegetables."

Alliston clapped him on the back.

"That's the idea, Frank. Think up the display—talk it over with Benny—and I'll advertise the same thing at the same time. Our newspaper stuff and our displays and our selling haven't always pulled together, but—after this we're going in for the most powerful kind of team work."

In the days that followed, the aggressive spirit spread. No longer were the staff content to sell the article asked for and let the customer go; their wits, sharpened by steady practice, invariably

In the morning he found staring at him from the store window a show-card bearing a legend.

lit upon some other article, the suggestion of which logically followed from the initial sale. They found that, far from taking offence, customers were pleased at this display of interest. When the painting season opened, the customer who enquired regarding house paints, instead of being handed a color card and left to choose for himself, as in the rush days of financial prosperity, found a clerk ready and eager to estimate the amount of material required and to help him make a selection of colors. And, instead of being let go with his paint, he was asked if he wanted brushes, told what kind of brush to use for any specific purpose, and left eventually with the invitation ringing in his ears, "If you have any difficulties, come to us."

The man who bought grass-seed was solicited for a lawn hose and sprinkler, a mower, and grass clippers. The purchaser of a kitchen range was interested, if possible, in kitchen utensils. The very kickers, when there were such, were made the medium for securing new business. The farmer who complained regarding the weather-beaten condition of the implements which he had carelessly left out all winter, usually went away with sufficient implement paint to renew their youth, and often bought sufficient metallic roofing and siding to cover a good-sized implement shed.

"Business is pretty dull, isn't it?" questioned Smithers, the most friendly competitor, in mid-July.

Alliston had just cleared out the last of his ice-cream freezers to the accompaniment of "Cut the cost of living by making your own ice-cream." He laughed cheerily.

"I don't find it at all bad," he returned.

"It's dull," repeated Smithers, hopelessly. "We'll have to wait till the money situation improves, I suppose—if we can hold on that long."

Every month now Alliston had a little, informal supper, to which, after closing hours, he entertained the staff, when plans for the succeeding month were discussed and team-work stimulated. The concluding supper of a strenuous year was held on New Year's Eve.

"Boys," said Alliston, a bit huskily, "nine months ago our store was on the down grade. For the first three months of the year our business fell off nearly thirty per cent. And then—then you and I and all of us bucked up.

"That money stringency was just the thing we needed. It jolted us out of the order-taking rut and simply taught us all over again how to sell. People will buy good value or buy in the hope of saving, no matter how bad the year, if you only go after the business, instead of waiting for business to come to you. In spite of those three bad months, boys, we've gone ahead of last year. There's not a man jack of us here isn't worth more as a salesman into the bargain. And when a man's worth more and earning more, he's going to get more, or my name's not Alliston."

The boys tore loose three cheers and a tiger. Which was as good a way as any of telling—if that were needed—that they'd caught the business-getting spirit.

Carnival in Mid-Winter Makes Business Hum

Advancement Club of Lindsay, Backed by Merchants, Draws Buyers From Surrounding Country on Single Return Fare—Attractive Street Parade With Floats, Business and Comic—Safe Plan for Delivering Parcels at Station.

THE town of Lindsay has adopted as an annual event a Winter Carnival to give a two days' impetus to February trade. The event includes a street parade, a Made-in-Lindsay exhibition, and a programme of sports, and what is even more attractive to the hundreds of people who are drawn in for many miles around, the leading merchants arrange a special series of sales, dry goods, hardware, groceries, etc. These sales are advertised extensively in the local press, daily and weekly, for a couple of weeks in advance. A further incentive to visit the town and its excellent stores is provided by the two railway companies, Grand Trunk and Canadian Pacific, both of which advertise single fare return rates covering the two days.

This year's celebration took place at the end of February and drew large numbers in both by train and in sleigh loads.

Street Parade.

The big display feature of the "Carnival" was the street parade, an ingenious mixture of the comic and serious, and reminding one of the old-time "Calithumpian" parades that did duty as late as ten years ago, and may yet in some corners of the universe. The parade was led off by the Citizens' Band followed by the fire brigade with their polished engines, and back of them were a series of fancy and comic floats. The local post office entered heartily into the scheme, and won first prize for a very seasonable skit on the newly installed parcel post. Rows of mail bags formed the outer walls of the sleigh, and the usual notices were posted up, with a humorous turn to them, and a young man's head stuck out of the delivery window added to the spirit of the occasion.

Clowns and boys and men in other comic costumes lined up behind and greatly amused the crowds that thronged both sides of the main business street. Among the skits were "dog catchers' outfit, a big horse pulling a man on a tiny baby carriage, a dog drawing a man on a bicycle, Indians, scouts, etc.

Merchants' Floats.

The merchants took part with some creditable floats.

A. L. Campbell, grocer, had two floats, and was a prize winner as was also Boxall and Matthie's hardware float.

An automobile company were seen with four cars on Friday, the first day, and came back with eight on Saturday, labeled "The People's Friend."

In the town hall were the Made-in-Lindsay exhibits, which drew a large attendance after the parade. On Saturday afternoon a good programme of sports filled out an attractive two days' entertainment.

Paint float arranged by Boxall & Matthie, Lindsay, Ont.

Handled by Advancement Club.

The affair was handled by the Lindsay Advancement Club, an organization composed of prominent business and professional men. This club has not limited its activities to this event, but is constantly on the look-out for anything that will improve the already progressive record of the town. One of their achievements has been the placing of numerous ornamental lights throughout the business section of the town.

The merchants generally speak very favorably of the increased business that the carnival brings.

Parcels for Station

A point connected with this that may prove suggestive to merchants in other places is the system adopted by several firms there for the safe delivery of parcels to the stations, a practice which was called into play very frequently during the two days of the carnival. This was originated, it is understood, by J. Sutcliffe & Sons, and consists in a double tag. Both parts contain the same number; in the one shown in this article it happens to be 7,332. On the main section of the tag is the firm's name and a place for the name and address of the customer. The other section is torn off and handed to the customer as a means of identification. Arrangements have been made through the railway companies with the baggagemen to receive all these parcels sent down by some of the stores. Just before train time the customers call for their packages, hand in the stub with the number on, and receive in return the correct parcel.

Good Means of Identification.

"Formerly we were accustomed to send down parcels half an hour or so before the train left, and our driver hung around until just before the whistle blew, when there would be a wild rush of the people to get their parcels. The result was that there was confusion, many, in fact, not knowing where our delivery was standing, and often they were too late. Then, again, if in order to prevent the delay to our driver we left them on a bench or table in the waiting-room, we had to trust to people's honesty, not to take some one

Regulations Governing Sale of Arms and Ammunition in Canada

Hardware Merchants Should Become Fully Acquainted With Regulations Assented to June 6, 1913, and Which Govern the Entire Dominion.

HIS Majesty, by and with the advice and consent of the Senate and House of Commons of Canada enacts as follows:—

1. This Act may be cited as The Criminal Code Amendment Act, 1913.

2. The Criminal Code, chapter 146 of the Revised Statutes, 1906, is amended as hereinafter set forth.

3. Paragraph (26) of section 2 is repealed and the following is substituted therefor:—

"(26) 'peace officer' includes a mayor, warden, reeve, sheriff, deputy sheriff, sheriff's officer, and justice of the peace, and also the warden, deputy warden, instructor, keeper, guard, or any other officer or permanent employee of a penitentiary and the gaoler or keeper of any prison and any police officer, police constable, bailiff, constable or other person employed for the preservation and maintenance of the public peace or for the service or execution of civil process."

Dangerous Weapons Penalty.

4. Section 118 is repealed and the following is substituted therefor:—

"118. Every one is guilty of an offence and liable, on summary conviction, to a penalty not exceeding one hundred dollars and costs or to imprisonment for three months, or to both fine and costs and imprisonment, who—

"(a) not having a permit in Form 76 has upon his person a pistol, sheath knife, bowie knife, dagger, stiletto, metal knuckles, skull cracker or other offensive weapon that may be concealed upon the person, or any air gun or any device or contrivance for muffling or stopping the sound of the report of any firearm, elsewhere than in his own dwelling house, shop, warehouse, counting-house or premises; or,

"(b) sells or, without lawful excuse, gives or lends any such offensive weapon, device or contrivance to any one not being the holder of a permit; or,

"(c) in the case of a sale, neglects to keep a record of such sale, the date thereof, the name of the purchaser, such sufficient description of the weapon, device or contrivance sold as may be necessary to identify it, the date and place of issue of the permit and the name and office of the issuer of the permit, or neglects to send a duplicate of such record by registered mail to the person who issued such permit or neglects to endorse upon such permit, the date and place of sale, the said description of the weapon, device or contrivance and the name of the vendor; or,

"(d) being authorized to issue a permit, issues it without keeping a duplicate thereof as a record, or having issued a permit fails to keep any record received by him of sales of weapons, devices or contrivances to the holder thereof; or,

"(e) issues a permit without lawful authority.

"2. Upon sufficient cause being shown, any officer of the Royal Northwest Mounted Police or commissioner of Dominion police or superintendent of provincial police or stipendiary or district magistrate or police magistrate or acting police magistrate or sheriff or chief constable of any city, incorporated town or district municipality may grant any applicant therefor, as to whose discretion and good character he is satisfied, a permit in Form 76, for such period not exceeding twelve months as he deems fit.

"3. Such permit, upon the trial of an offence, shall be prima facie evidence of its contents and of the signature and official character of the person by whom it purports to be granted.

"4. Whenever the Governor in Council deems it expedient in the public interest he may, by proclamation, suspend the operation of any of the provisions of this section in the whole or any part of Canada, and for such period as he deems fit.

"5. Nothing in this section shall apply to any weapons, devices or contrivances authorized to be carried by any member of His Majesty's naval, military, or militia forces, or carried by any peace officer, or to any bona fide sale made by any manufacturer of or person trading wholesale in such weapons, devices or contrivances to any person bona fide dealing in such articles and having an established and fixed place of business.

"6. Every peace officer may search any person whom he has reason to believe and does believe has upon his person any weapon, device or contrivance contrary to the provisions of this section, and may seize any weapon, device or contrivance illegally in the possession of any person without a permit. Any such weapon, device or contrivance had or carried in violation of this section shall be forfeited to the Crown to be disposed of as the Attorney General of the province in which such forfeiture takes place may direct."

The accompanying article is being published by special request of W. F. Macpherson, Prescott, Ont., President Ontario Retail Hardware and Stove Dealers' Association. Pres. Macpherson approached Hardware and Metal for information regarding the regulations governing the sale of weapons and ammunition in Canada, particularly to minors, and suggested that the information be published in Hardware and Metal for the benefit of other hardwaremen. We take pleasure in publishing the regulations in full, and are indebted to the Department of Justice for co-operation in the matter. —Editor.

Selling to Minors.

5. Section 119 is repealed and the following is substituted therefor:—

"119. Every one is guilty of an offence and liable on summary conviction to a penalty not exceeding fifty dollars who sells any firearm or gives or sells any pistol or air-gun, or any ammunition therefor, to a minor under the age of sixteen years unless he establishes to the satisfaction of the justice before whom he is charged that he used reasonable diligence in endeavoring to ascertain the age of the minor before making such sale or gift and that he had good reason to believe that such minor was not under the age of sixteen years."

6. Section 3 of chapter 9 of the statutes of 1907 is repealed and the following is enacted as section 151:—

"151. Every one who, by himself, his clerk, servant, agent or other person, violates any of the provisions of section 150 is guilty of an offence against this Part and liable on summary conviction to a penalty of two hundred dollars and costs and, in default of payment, to

(Continued on page 145.)

Science of Building a Retail Business

Address of A. F. Sheldon, Chicago, at Ontario R.M.A. Banquet.

SOMETHING after the manner of Elbert Hubbard, was the address of A. F. Sheldon, head of the Sheldon School, Chicago, at the annual banquet of the Retail Merchants' Association of Ontario; original, witty, incisive, epigrammatic, pungent, comprehensive, and thoroughly helpful, altogether a rare address to retail men.

"Prejudice," remarked Mr. Sheldon, at the outset, "is a great hindrance to progress. The way to build a retail business is to bring the conduct of that business into harmony with the laws of nature. The truly great reflect consciously or unconsciously certain basic natural laws.

"The way to build a retail business is the same as the way to build any kind of business—by making it reflect natural law. Sir William Blackstone defines common law as a rule of action or conduct prescribed by the highest authority of the state. You and I must bring our lives into harmony with those laws of the state. If we violate any we pay the penalty of a fine, the penalty depending upon the seriousness of the offence. If we violate a law of the state by taking life we must pay the penalty of death. Natural law, as Blackstone would say, is the rule of action or conduct prescribed by the highest authority in the universe —the Creator, the Infinite, the Great First Cause. In nature we see the manifestations of intelligence. Cause cannot give rise to that which is not in itself. You and I must consciously or unconsciously work in harmony, to build our business. If we violate any law tending to the building of that business, we lose by way of substraction from possibilities of greater business. If the offence is serious we are deprived of our job—we die a financial death.

"I submit that one who has started a business and gradually built it to greater proportions had his life in harmony consciously or unconsciously with basic natural laws.

Stumbling in the Darkness.

"Failure is stumbling in the darkness of nature's law.

"Business building is the art of securing permanent and profitable patrons. If the retailer secures a sufficient number of permanent and profitable patrons he builds up his business.

"When every employee awakens to the fact that the sale of service is the same law as that which influences the price of sugar—quantity plus quality of the goods delivered; when he realizes that, he will not be losing his eyesight looking for more pay, or fostering spite against an unappreciative boss.

Storekeeper vs. Merchant.

"Let us now consider the concept 'profitable.'

"There is a big difference between a storekeeper and a merchant. Keep your eye on the profits. The man who cuts the throat of a transaction and spills the life blood of the profits is not a salesman. He is a storekeeper—an order taker. Men who figure they have made 25c. when they buy a picture for a quarter of a dollar and sell it for 50c., are not conducting a profitable business. They forget that the 25c. margin may be entirely eaten up in overhead charges. There are men who do not charge either rent or interest on their investment as part of their expense of running a business.

"I know a man in the United States who operates a chain of stores. He is an expert on mathematics, and has been able to install systems in every department of every store so that he knows exactly each week what he has made or lost in each department of each of the stores.

"That man is consciously in harmony with nature's law of system and order.

"Now we come to the concept 'permanent.'

"A house is known by the customers it keeps—not by those it gets. There may be no profit on the first order of Mrs. Jones because the advertising necessary to get her into the store may have absorbed the entire profit.

"Let the Seller Beware."

"In olden times the rule of business was 'let the buyer beware.' With everything else it was different, but when it came to the sordid thing of business the buyer had to beware. The modern version of this is 'let the seller beware.' If you want the permanent patron don't do him up.

"The science of business is the science of rendering service—he profits most who serves best. The square deal in the here, now pays in dividends—it pays in the sordid thing of business if you please.

"But the retailer must be more than square. To have the permanent patron one must give three things—quality always; right quantity; and mode of conduct of his business.

"Q. plus Q, plus M equals service.

"Success in life means the making of profitable patrons.

"The butcher who gives the right quality of meat, but shortens the weight does not secure permanent patrons. That man's service is off on his second Q. The man who puts up his meat in fine packages and delivers promptly does not secure permanent patrons unless he gives quality plus quantity. Neither does the man who gives the right weight and who is prompt in his service and yet sells tainted meat.

"The wagging tongue of a satisfied patron is the best advertisement in the world.

"The wagging tongue of a dissatisfied patron is the worst advertisement in the world.

"But the butcher who gives quality plus quantity and who conducts his business properly is the lucky one. People will go blocks out of their way to buy his product.

"It is obedience to God's eternal laws

SOME OF THE GEMS.

"The man who spills the life-blood of the profits is not a salesman. He is a store-keeper, an order-taker."

"A house is known by the customers it keeps; not by those it gets."

"Failure is stumbling in the darkness of Nature's law."

"Business-building is the art of securing permanent and profitable patrons."

"He did not give me his right Q plus Q—quantity plus quality."

"The science of business is the science of rendering service. He profits most who serves best."

"To have the permanent patron one must give three things: quality always, right quantity, and mode of conduct of his business—Q plus Q plus M."

"The wagging tongue of a satisfied patron is the best advertisement in the world."

"Advertising is the fire under the boilers of business."

"The negative suggestion kicks the football of the mind toward the goal of 'No.'"

"Salesmanship is the art of persuading people to purchase products at a profit."

"There are too many people in the world who lack terminal facilities."

that brings him success.

"When in trouble and you want to find the cause look in the looking glass —that is stern philosphy, gentlemen, but it is true.

"Ninety-nine men out of every hundred you ask why they are in business and they will tell you 'to make money.' That in a sense is true. As society is organized to-day, we must have money. There are four ways to get it—steal it, beg it, inherit it, or earn it. The latter is the only certain way.

"If all the retail grocers and clerks in the country were to die to-night what would become of the people in the morning? This emphasizes the great service the retailer renders. The money you get is to pay for service. If the service is little, there will be little pay. Big services generate the heat of larger pay. There are millions of men losing their eyesight looking for dividends. If they looked towards rendering Q plus Q plus M they would be doing a much greater service to the community. So if any one asks you in future why you are in business tell him that you are in business to render a service to the community.

"The next concept is 'making.'

"Emerson tells us that if a man makes a better mouse trap than his neighbor the world will make a beaten path to his door. That is hardly correct. Very few will tear down the tall timber to get to your door unless you tell the people about the mouse trap—your business.

"I believe in quality, yes, but if we are going to make profits we mustn't hide our light under a bushel.

"Advertising is the fire under the boilers of business.

"Advertise a little and it does not pay. A little fire will not help build much of a business—but on the other hand too much may melt the business. There are many forms of advertising besides the written form. The boosting of the men and women who work for you among their friends is one of the greatest advertisements you can get. One of the worst is the knocking of these people.

"You cannot reap figs from thistles.

"Ninety-five per cent. of the people of the world are employed by the other five.

"To get, you must give. Loyalty and love are queer things. The more you give the more you have.

"You cannot give of hate and disloyalty and get something in return. I know of exceptions. The more you do for some people the less appreciated you are, but I am speaking of the great law of averages—the great law that if you give you shall receive. 'Do unto others as you would have them do unto you,' as the Man of Galilee said, is a great motto to be remembered. The man who builds his business must do unto his customers as he would have them do unto him.

The Negative Suggestion.

What is salesmanship? One of the most potent elements in making permanent and profitable patrons is the law of suggestion. It seems to be the universal habit of order takers to use the negative suggestion instead of the positive suggestion. There are millions of people in stores telling you every day that you don't want this or that.

"The negative question kicks the football of the mind toward the goal of 'No,' the positive question to the goal of 'Yes.' "

To illustrate this Mr. Sheldon told of a purchase he was making some time ago of a collar and cuffs. After making the purchase the clerk said to him, "You don't want any ties, do you?" And he said, "No." That was the natural answer. A few days later his wife pointed out that he ought to have a new tie. He really did want that tie, but the clerk told him he didn't. In another store just three doors away he bought one. The clerk said to him after making the sale, "You will want some more ties in a few days—it will save you shopping again if you take them with you." He purchased three altogether because the clerk told him he needed them, and he almost bought a scarf besides. In fact a few days later when passing the window of the same store he noticed some scarfs in the window, and he went in and bought one.

"One of those stores is no more. You can easily guess which one it is. The clerk should remember that the fault lies not in the boss but in himself.

"Salesmanship is the power to persuade people to purchase products at a profit. A great pod of peas, isn't it? But if you want to make the pod a larger one you can say that salesmanship is the power to persuade plenty of people to pleasurably purchase product at a profit.

Lacking Terminal Facilities.

"I feel sorry for the man who is affected with the disease of knowitallitis. Remember you can't stand still. You must either go forward or backward, and the power to persuade people to purchase product at a profit has never been perfected by any of us.

"The old idea that the glib talker is always a salesman is entirely wrong. Some people talk a man into buying and talk him out of it again. There are too many people in the world who lack terminal facilities.

"You, gentlemen, can make this organization great if you want to by elevating the profession of retail merchandising. To the degree that men fail to co-operate, to that degree are they insane. In any insane asylum the first sign of co-operation means the return of sanity. Co-operation is one of God's first laws. We witness it in nature where the drops of water co-operate and form into one big white drift."

Prolonged applause greeted the conclusion of Mr. Sheldon's address, which was undoubtedly one of the most practical and thoughtful that has ever been listened to by a group of Canadian retail merchants.

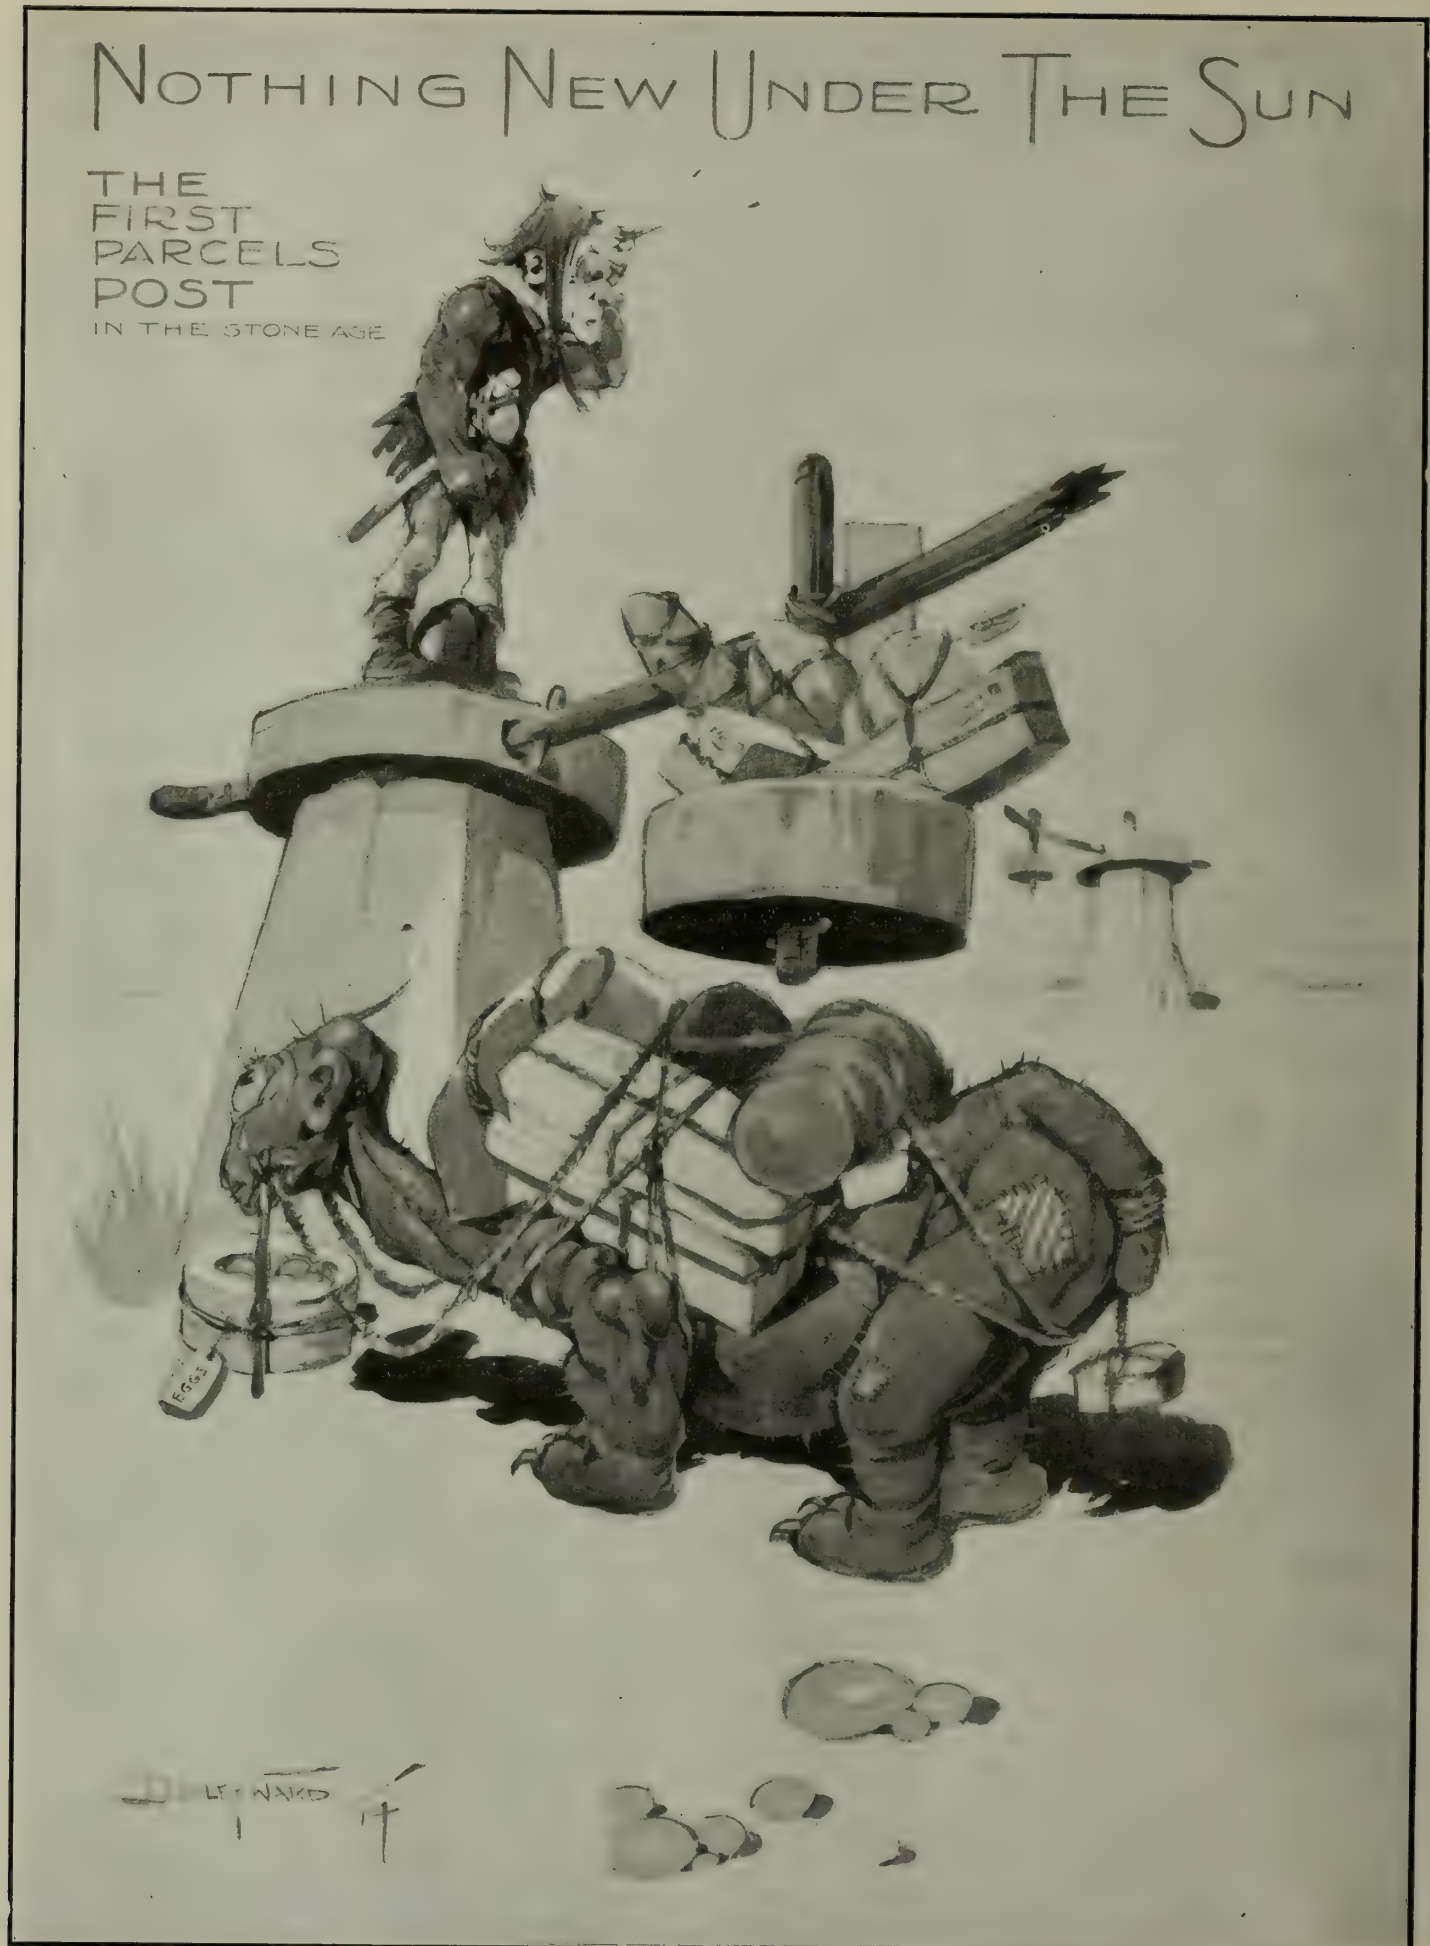
SALE OF ARMS AND AMMUNITION

(Continued from page 143.)

imprisonment for a term not exceeding three months; and, upon any subsequent conviction, to a penalty of three hundred dollars and costs, or to imprisonment for a term not exceeding six months, or to both, and, in default of payment of such penalty, to imprisonment or to further imprisonment for a term not exceeding three months; and imprisonment in each case shall be either with or without hard labor."

7. The following section is inserted immediatedly after section 169:—

"169a. Every one who falsely represents himself to be a constable or other peace officer, or who, not being a constable or other peace officer, makes use of any badge or article of uniform or equipment in such a manner as is likely to make persons believe that he is a constable or other peace officer, is liable upon summary conviction to a fine not exceeding one hundred dollars and costs, or to imprisonment for a term not exceeding three months, or to both such fine and such imprisonment."



Don't talk about a man behind his back; that is the place to kick him. If you are an employe do not "knock" your boss when he isn't around. That doesn't do you any good, for the only ones to hear you are those with no power to better your conditions. And if you don't like your employer go out and get another one, rather than to kick about the man who is making it possible for you to eat and dress well and have pocket money, etc.

The merchant who trains his own clerks, taking them in while young and requiring them to pass through minor positions to those of greater importance, has a better chance to teach his own ideals and principles of business and his own store policies than the one who selects his clerks from applicants who have had more or less experience. On the other hand, the merchant who goes to other stores for his trained help benefits from the ideas of business that these men bring into the business.

NOTHING NEW UNDER THE SUN

The above is the first of a series of comic business cartoons which Dudley Ward has prepared for The MacLean Publishing Co. There is humor galore in all of Mr. Ward's characterizations, and he is at his best in this series. To apply phases of present-day business life to conditions existing in the Stone Age gives ample scope for the exercise of a whimsical imagination and a facile pen; and Mr. Ward, in his inimitable drawings, gets the most out of his subjects. The next sketch will be "Joy Riding in the Stone Age."

Making Use of New Parcels Post System

Hardwaremen Have Advantage of Local Zone to Help Them in Competing With Mail Order Competition—How Some Merchants Have Used Parcels Post.

WHEN the parcels post system was inaugurated on February 10 the weight limit was placed at six pounds, and information was given out that at the expiration of three months the weight limit would be increased to eleven pounds. An extra charge of five cents was also levied on parcels delivered by carriers. On account of the six pound weight limit, hardwaremen were considerably handicapped on account of the weighty nature of most hardware lines.

The trade in general was very glad on March 6 when the weight limit was unexpectedly increased and the additional five cents charge was dispensed with.

When the subject of parcels post was first broached in Canada, a number of hardware and other merchants were greatly opposed to the system. Other merchants were in favor of the system, and there appeared to be a great variance of opinion as to whether the system, if introduced, would benefit the retailer or work against his interests. It was pointed out that if parcels post was introduced the mail order houses would be the greatest benefactors under the new system. This would undoubtedly have been the case had a flat rate been adopted. The flat rate system was wanted by the mail order houses, and this feature was strongly opposed by retailers and by the trade press.

When the announcement was made that a zone system, with a local zone, was to be adopted, the retail merchants breathed easier.

There still remained some doubt as to whether retailers would make use of the new system or not; but judging by some of the newspaper advertisements of retail hardware merchants, the parcels post system is going to work for the retailer who is willing to go after the business.

Parcels post is here, and in all probability to stay. Our neighbors to the South are making good use of parcels post, they having a fifty-pound limit. No doubt the Canadian limit will be advanced as the new system progresses.

American retail hardware men are making parcels post work for them, and there is no reason why the system cannot be used to advantage in this country. The local merchant has a splendid advantage in the local twenty-mile zone. In this zone a fairly low rate applies.

The accompanying illustration shows a reproduction of an advertisement inserted in a newspaper by the Collingwood Hardware, Ltd., Collingwood, Ont. This advertisement appeals to the farmer, and points out to him the value of his time during the spring. The rates for the local zone are also shown in the advertisement.

There are several seasons during which parcels post could be used by the farmers. During the spraying season the farmer could have spraying material, such as paris green, etc., sent out by mail. During harvest season the farmer might run short of a few balls of binder twine. A phone message "via rural phone" to the retail hardware man would bring the twine delivered to the home of the farmer. Many other lines might be mentioned.

In the accompanying advertisement bolts, screws, nails, snaps, rope, whippletree hooks, bull-rings, sireat collars, etc., are featured.

With parcels post, rural phones, and rural mail service at his command, the retailer should be able to gather in a very fair amount of mail order business from farmers within the twenty-mile zone surrounding the centre in which the retailer is located.

Large numbers of U.S. retailers are making parcels post work for them. Canadian retailers can do the same. Make parcels post a business-bringer for your store, instead of a feeder for the large mail order houses that are now combing the entire country and picking up a large volume of business which is very profitable to them, and which would be profitable to the small retailer if he were able to secure the business.

Important!

To those who have

Rural Mail Facilities

A parcel weighing 11 lbs. can be sent direct to your home at 2c lb.

The time it would take you to hitch up your horse drive to town and return is worth considerable more than that, which you can easily figure.

Spring is nearly here and you will require

Bolts, Screws, Nails, Snaps, Rope, Whiffle Tree Hooks. Bull Rings, Pig Rings, Sweat Collars and hundreds of other necessities

which could reach you quickly by this new PARCEL POST METHOD.

As you think of and discover the things you require, make out a list, jot them down and when ready mail it to Collingwood Hardware Limited and they will take particular pleasure in filling your order without delay.

BELOW IS THE PARCEL POST RATES

1 lb	2 lb	3 lb	4 lb	5 lb	6lb	7 lb	8 lb	9 lb	10 lb

For first Three months 6 lbs is limit of weight.

Collingwood Hardware
LIMITED

Phone 131. Collingwood, Ont

In preparing goods for shipment by parcels post, dealers should bear in mind the following regulations issued by the postmaster-general:—

For instance, in regard to eggs, it is recommended that a papier mache, wooden or other box of a rigid material with a tight-fitting lid be used; that each egg be wrapped separately in newspaper or other protecting material and fill up the vacant spaces carefully. In addition, the parcel is to be clearly marked as containing eggs.

Specific regulations are given as to the methods in which liquids, oils or fatty substances must be packed in order to be sent through the mails. Strong wooden or heavy cardboard blocks or tubes are necessary, with a cushion of some absorbent material to take up the liquid in case the container should break. Further, every precaution must be taken to make the block or tube water-tight. Manufacturers or dealers who intend to send such articles in quantities are recommended to submit a sample package to the officials, so that the conditions are seen to be observed.

Further all parcels have to be prepared in such a way that the contents can be easily examined, and the sender's name and address should appear on the cover of the parcel.

DATES FOR WESTERN CONVENTION.

The convention of the Retail Merchants' Association of Western Canada will be held on March 23, 24 and 25, at Moose Jaw, Sask.

It is expected that close on a thousand delegates will attend the convention and all matters regarding transportation will be left in the hands of officials at Saskatoon.

The following are the Moose Jaw committees appointed to arrange the details of the convention:—

Accommodation and reception committee—G. Morrison, H. A. Davidson, N. J. Porter.

Programme committee—W. R. Eccleston, Williams, and E. O. MacGinnis.

The arrangements for the entertainment of the delegates will be left in the hands of the general executive, of which body E. O. MacGinnis is the secretary.

Window Displays That Expand Sales

Novel, Yet Practical Displays by Dunlop & Co., Pembroke, Ont. —Show Windows, if Used Properly, Will Pay Big Returns — Household Goods Display to Interest the Ladies.

THE show window of the retail hardware merchant is the salesman who stands at the front of the store and attracts the attention of the passer-by. There is practically no limit to the value of your show window as a salesman. Whether the show window will be an expert salesman or an ordinary every-day clerk depends altogether on the merchant or his window-trimmer.

Money and time spent in arranging window displays is money and time well spent, and the investment is one that will yield big returns.

The show window is one of the best, if not the best, advertising medium at the command of the retail hardwaremen, and the latter should take every opportunity to keep his windows up-to-date.

Three Good Displays.

In the accompanying illustrations we show three displays arranged by W. A. Dopson for Dunlop & Co., Pembroke, Ont. In each window we find novel, yet practical features. The novel features attract the attention of the passer-by, and he cannot view the novel features without being impressed by the display of practical goods which are also shown.

Household Goods Display.

One window is devoted to a display of household goods. Here we see a display of goods particularly interesting to the ladies—a desirable class of customers for the hardwareman. Wash-day and housecleaning needs particularly are featured. The background is appropriately made of brooms, while lengths of clothesline are suspended from the ceiling. A price card shows that the price of the brooms is 50 cents each.

Dustless mops are also featured, especially at one end of the window, where a neat display has been artistically arranged. A washing machine with wringer attached is the centre of attraction, while tubs, boilers, washboards, brushes, polishes, clothes baskets, scrub-brushes, etc., are also displayed. In the centre of the display is shown a large showcard bearing the words: "Enemies of Dirt." In the window there is indeed a splendid array of enemies of dirt.

Another good feature in connection with this display is the use of price cards, showing prices in plain figures. These cards were neatly gotten up, and add greatly to the value of the display as a selling medium.

Oil Heaters, Bathroom Fixtures, Etc.

In display No. 2 we see a novel and attractive display of oil heaters, plumbing fixtures, etc. Quite a number of oil heaters were sold as a result of this display, and numerous inquiries were made for bathroom fixtures and plumbing goods. The cardboard cut of the children looked very lifelike, and attracted considerable attention.

The scene represented the interior of a bathroom.

Tools, Etc.

In display No. 3 is shown a neat array of tools, including carpenters' machinists', electricians', and other mechanics' tools. The background of the display was made of machine oilers, saws, squares, hammers, and draw-knives.

A fire pot in one corner of the window attracted a great deal of attention on account of its realistic effect. Suspended from three cant hooks was a chain with the fire pot attached. Under the fire pot were several pieces of wood, the ends of which had been previously charred. Hid among the wood was an ordinary globe covered with red tissue paper. Strips of red and yellow tissue piper were tacked to the pieces of wood. An electric fan below kept the pieces of tissue paper

in motion, and with the red glow from the covered globe, the whole made a splendid representation of a blazing fire.

These displays were arranged for the purpose of expanding sales, and no doubt accomplished the purpose.

Immediate results are not always obtained from window displays, and many window trimmers, especially amateurs, have often been discouraged over not having made a large number of immediate sales after a display had been arranged. A good display has a far-reaching effect, and enquiries will often result months after the display has appeared.

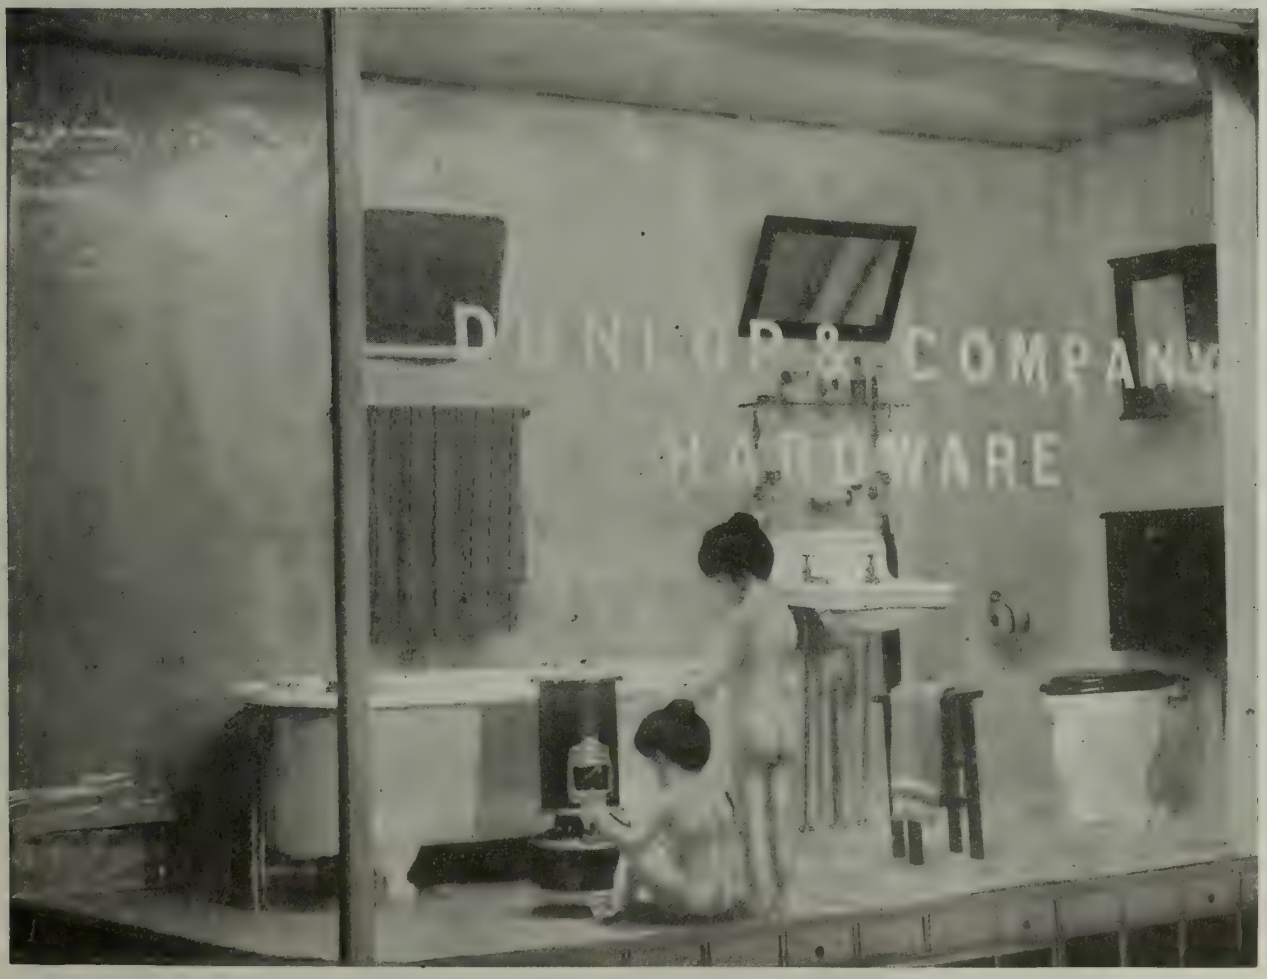
Essential Feature.

One important point that should be observed when arranging a window display is to embody in it an attention-compelling feature—a pertinent selling talk or argument that presents the subject in a simple, novel manner, so that it will be viewed and understood by the hurrying throng.

In order to fulfil the mission for which it was intended, the display must be looked at by passers-by, and in addition to attracting attention, it must hold it long enough to create the desire for possession. People are usually in a hurry, and they must be attracted by something more than bulk. The real business-bringing window should be as attractive and yet as simple as possible in order to enable the spectator to catch the point or argument. It is essential to be consistent and persistent in keeping your show or advertising window constantly before the public in an attractive and educational manner.

The window in which the display is changed regularly, and which contains displays that appeal to the public, will be watched closely. The neglected or spasmodic window will usually be passed unnoticed.

The show window is the place to teach the interested public the points and arguments you wish them to learn, and the success of a display or advertising window depends largely upon its appeal to the public.



Window Displays.

During recent years there has been a remarkable development in the window-trimming of retail hardware merchants. This phase of retail merchandising is closely followed by Hardware and Metal, and each year an annual Christmas window contest is held. With each succeeding year there has been a marked improvement in the displays submitted and growing of wider interest. When the prize winners were announced in Hardware and Metal a few weeks ago, one of the judges in his report stated as follows:—

"The annual Christmas window contest of Hardware and Metal has been growing of wider interest with each succeeding year, culminating in a truly inspiring contest at the close of the past year. Not only was the number of contestants larger, but the representation from the various provinces was more thorough. The West was particularly well represented, many photographs being submitted by Western trimmers.

"An outstanding feature was the very markedly high quality of the displays submitted. Those who have seen the trims sent in year after year, as the writer has done, cannot help but have noticed that the quality of the work has been gradually getting better. Year by year hardware window trimming has advanced. It began on a comparatively low standard and has now attained a stage where it ranks with the best work seen in any other trade.

"It is undoubtedly fair to ascribe a share of the credit for this development to Hardware and Metal. The articles

Display of oil heaters and bathroom fittings by W. A. Dopson, for Dunlop & Co., Pembroke.

which have been given to the trade have helped materially in creating a realization of the importance of window displays as well as educating the display men to do a higher grade of work. For many years Hardware and Metal has reproduced window trims of all kinds of goods. The writer knows of several hardwaremen who have clipped all pictures of windows which have appeared and have filed them away, using them constantly and to good advantage in arranging trims themselves. Finally, the annual Christmas contest had done a great deal to educate the hardware window trimmer; a fact most amply attested by the improvement seen each year in the quality of the displays submitted.

A Difficult Decision.

"The awards announced last week were reached with great difficulty. When the judges settled down to the task of selecting the six best trims from the two huge piles of photographs before them, they realized that their task was far from a light one. As the work advanced, this impression deepened. There were so many really splendid windows submitted that to make a fair selection entailed the closest and most exacting scrutiny, the study of detail and the careful analysis of general effect. We feel, however, that the windows finally selected were the best of the lot when passed under the close scrutiny and rigid examination that was found necessary. Our reasons for ranking the prize winners in their respective order will be outlined later.

"It should also be explained that the judges faced another very grave difficulty. Many of the best displays were shown on small and indistinct photographs. In several cases it was practically impossible to appraise the worth of a window because the print was too poor to show up the details. In other cases, the photograph was sufficiently clear to demonstrate that the window had been a good one but not good enough to make the display attractive appearing. Would the judges be justified in eliminating contestants whose photographs handicapped them in this way? This question was debated at some length and regretfully the judges felt impelled to rule in the affirmative in a number of cases where the prints were very indistinct. A number of others were considered strongly, however, and one was awarded a prize."

Hardware and Metal will during the next few months publish some excellent reproductions of window displays from which hardwaremen and their clerks will be able to glean many valuable pointers.

Window space is too valuable to be wasted and means loss of business and profits to the merchant who overlooks this important sales creating end of his business.

REMARKS OF THE JUNIOR CLERK.

Would you hire yourself for the job were you the boss? Introspect.

* * *

There is no room up-a-head for order-takers, but a welcoming hand—filled with gold—awaits the salesman.

* * *

A narrow man never yet made anyone happy—not even himself.

* * *

Failure is more often due to a want of ideas than to a want of capital.

* * *

Every good thought you send out is a silent power, working cheerfulness in the heart of someone—and helps you as well.

Display of household goods by W. A. Dopson, for Dunlop & Co., Pembroke.

From Millinery Clerk to Steel Magnate

The Life Story of One of America's Best Known Steel Magnates—Telling of Struggles and Victories Which in the End Spelled Success.

Written For Hardware and Metal By C. P. McDonald

I WAS talking with the vice-president and general manager of one of the world's greatest steel companies. We were sitting in his richly appointed office in Chicago.

"Facts", I told him, "always make good reading. I have heard that your rise to power in the steel business is the result of hard work, self-denial, constant application, deep study. The actual facts concerning your career ought to be engrossing. You've reached the top. Why not let the many readers of Hardware and Metal know just how you did it? Such a narrative always is an incentive for harder work on the part of ambitions young men. Such business romances point a moral —a splendid one—the moral of men who decline to recognize failure."

For several minutes he sat and weighed the proposition. Finally he declared, "I'll do it, for I believe you're right! Modestly, however, prompts me to ask you to withhold my name."

"We will omit the name," I assured him. "Hard facts, not names, give these sketches their human interest appeal."

Settling comfortably back in his swivel chair, he told me the "story of his business life."

There are a lot of men in the world who argue that sucess is the natural result of concentration. When a young man applies to them for advice on how to become a really successful business man, the answer almost invariably is "Concentrate, young man; concentrate. Get a good job, nurse it, study it, and put all your application on its development."

In the abstract it's a good line of argument; in the concrete, however, it's altogether too theoretical. I believe it's better for the young man to first get a job in which he can throw every ounce of enthusiasm he has, master it, and then concentrate. The greatest failures in the world have been men who concentrated on jobs that they did not like and for which they had nothing but false enthusiasm.

It took me a long time to work my way up to the concentration point. My preparatory course was thorough, and when things finally began to move, they moved swiftly.

In order to stick closely to the facts and circumstances that molded my career, I must resort to stereotyped explanation and phraseology in certain details. No life romance is complete without them. So, to begin with, I was born on a Pennsylvania farm, the starting point—if biography is to be taken at its face value—of many of the world's successful men.

When I had attained the age of fifteen my father died. Up to that time I had attended school regularly. His death made it necessary for me to get out and hustle for my mother and myself. Taken from school at that age, a chap is hardly expected to go out and set the world afire. So I didn't do anything that wasn't expected of me. I went to the boss of a wholesale and retail dry goods and millinery establishment and applied for work as a clerk.

Every hardwareman, and especially hardware clerks, should read the accompanying article, "From Millinery Clerk to Steel Magnate," written by C. P. McDonald, in which is portrayed a true life story of one of America's most successful business men, telling how he began his business career as a millinery clerk and after overcoming many obstacles rose to the position of Vice-President and General Manager of one of the world's greatest steel companies.

The proprietor of this store had been a close friend of my father's. He realized that my application needed consideration, so he offered me a clerkship at $1 a day. He was a thorough accountant, and when I entered his employ I made it known that I wanted to learn bookkeeping. Willing to help me advance, he readily consented to put me through the paces.

There's the very beginning. The curtain has risen on the first act. Now for the development of the plot. I lived at home with my mother, and how she managed to get along on $30 a month for those first few months I can not imagine. I studied bookkeeping after business hours. Many a long night I sat by an oil lamp far into the early hours of the morning mastering the intricate knowledge of double entries and trial balances. It was all part of the day's work and it meant better things in the future.

I had no fondness for the dry goods and millinery business, but I studied it just the same, for in those days money was the thing I had to work hardest for. You can't very well think of the vice-president of a big steel company knowing all about straw, willow plumes, and paradise feathers, can you? Stranger combinations may be found, however, without undue search. I know a lumber manufacturer, for example, who can tell you more about typewriters and band saws than the makers themselves. I know a restaurant proprietor who has an inexhaustible fund of knowledge concerning the manufacture of gunpowder and high explosives.

At the end of six months, having spent many hours in the millinery department of our store, I acquired an insight into the hazy building of women's hats. I took up each article systematically and studied its composition. I analyzed straws and experimented with fabrics, and the weaving of ribbons. One of the head salesmen threw up his job one day. I went to the boss and asked for the job. He laughed, telling me to go up to the millinery department and get an education. I told him I already had done so. He was a little surprised. He twitted me about my age. I was a husky chap for my years and I told him I'd easily pass for a man of twenty-one.

"Give me this position," I said, "and I'll take all the risk. Pay me a percentage and cut out the salary. If I don't sell any goods you'll be out nothing but my expenses. I know I can sell millinery supplies."

I finally convinced him. I took my sample case and went out after the game. I bagged it, too. You can sell goods if you know your line and can talk from the standpoint of familiarity with every thread that goes into their composition. I could talk that way and I did talk that way to my customers. A hardware clerk, for instance, who knows the composition of his wares, who can talk with manufacturing wisdom about the superiority of a certain steel saw over an-

other, can make a sale where the clerk who knows only that 'it's a good saw because the makers say so' will fall down. People don't like to buy goods from a clerking machine; they like a salesman.

Right here, if you'll permit me, I'd like to digress long enough to say something anent retail salesmanship. I once talked with a high executive of a big Chicago concern. He began life as a lowly clerk. He did not, however, long remain a counter man. He developed ideas and brains, and to-day he's worth a lot of money and is an authority on the hardware business.

"When a customer enters a store," he declared, "and a clerk meets him with a smile, sells him an article or two that the customer asks for, gets the money, and then wishes him a polite good-bye, it's very nice—so far as it goes. But a penny in the slot machine could do it nearly as well. That's not salesmanship; it's just a human machine filling orders.

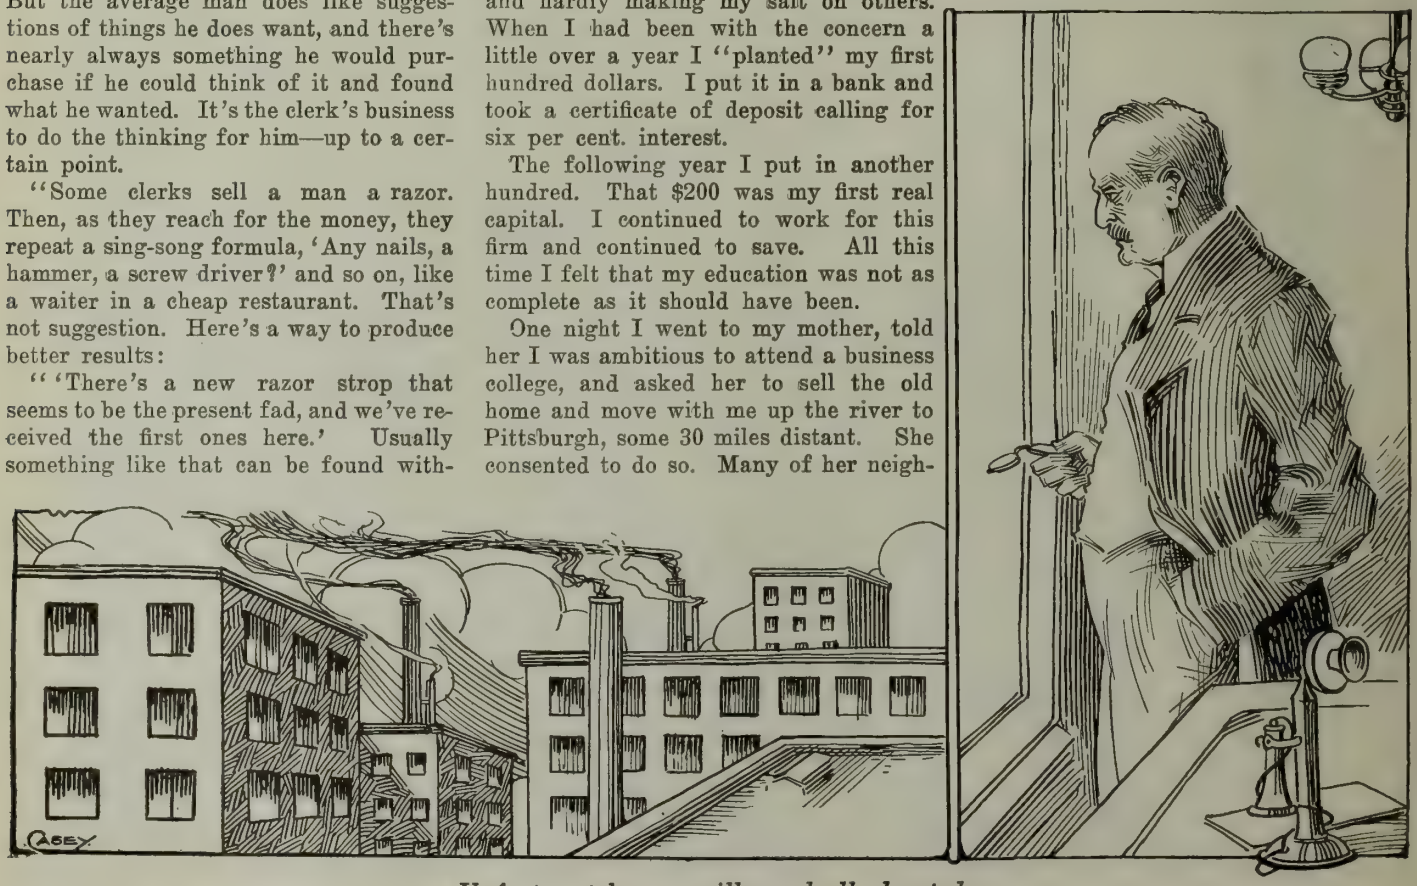
"A store spends money advertising the stock, trimming the windows, and in fitting up attractively. All this is done to draw trade inside and give the clerk a chance to do his share. If he does no more than ask the customer's wants and then supply them mechanically, a twelve-year-old $3-a-week-boy would do as well. He might argue that a customer doesn't want to be nagged into buying things he doesn't want. That's perfectly true. But the average man does like suggestions of things he does want, and there's nearly always something he would purchase if he could think of it and found what he wanted. It's the clerk's business to do the thinking for him—up to a certain point.

"Some clerks sell a man a razor. Then, as they reach for the money, they repeat a sing-song formula, 'Any nails, a hammer, a screw driver?' and so on, like a waiter in a cheap restaurant. That's not suggestion. Here's a way to produce better results:

" 'There's a new razor strop that seems to be the present fad, and we've received the first ones here.' Usually something like that can be found without fabricating, if the store is a progressive one, and the clerk can reach for it while making his talk. The words interest a customer in a moment—the new strop interests him a moment later. He may not like it, but while he is looking the clerk can bring out something different—and there's a good chance he'll sell him. By this time the clerk is on good terms with the customer and the conversation has grown easier, and if he lets one thing lead to another it ought not to be hard to add something else to the article the man wanted when he came into the store.

"That's the difference between a clerk and a salesman. But don't think the man who forces sales on a customer and worries him into buying is making good. There's a difference between selling a man something he wants and something he has no use for.

"You'll find men who religiously avoid certain stores for fear something they don't want will be unloaded on them. That hurts business. The clerk should remember there's always something else the customer needs and will find out what it is by suggestion. The customer naturally won't regret buying that."



Now to continue with my story. I went out just before the opening of the season, and my commissions for the first day out amounted to $16! I made several trips during the next six months, making good money on some of them and hardly making my salt on others. When I had been with the concern a little over a year I "planted" my first hundred dollars. I put it in a bank and took a certificate of deposit calling for six per cent. interest.

The following year I put in another hundred. That $200 was my first real capital. I continued to work for this firm and continued to save. All this time I felt that my education was not as complete as it should have been.

One night I went to my mother, told her I was ambitious to attend a business college, and asked her to sell the old home and move with me up the river to Pittsburgh, some 30 miles distant. She consented to do so. Many of her neighbors tried to induce her not to make the change, telling her the cost of living was higher in Pittsburgh, we would have to pay rent, and most of them prophesied we would be glad to return to Beaver Falls before many days. I promised her faithfully she would never regret the change. She took my word in preference to that of her neighbors, we migrated to Pittsburgh, rented a cosy home, and began all over.

I took a course in a commercial college and graduated, studying mostly at night time. Meantime I found employment as bookkeeper with a dry goods and notion store at $12 a week. I followed this work for about two years, when an opening at $15 a week came to me from a retail grocery concern. I took it, sold beans, coffee, and so forth, over the counter during the day and balanced my books at night. Midnight often found me poring over my ledger. This consumed three years more of my life.

One day I got acquainted with a young fellow who was in the rolling mill and steel business in Pittsburgh. A mutual attachment sprang up between us and we became great friends. He told me he was thinking of going to Portsmouth to start up a mill. I had about a thousand dollars at that time and asked him to give me a chance to join him in a small way. He told me he'd let me know. Soon after opening his Portsmouth mill he wrote me to the effect that

Unfortunately our mill was badly located.

the directors had decided on employing a local man to keep the books. A few months later, however, he wired me offering me the job. The grocer was unwilling to let me leave, but as I considered the change the turning point in my life, I accepted the mill employment.

I kept the books of the rolling mill, the steel plant, and the company's general store, at which they sold supplies to the workmen. I started with a salary of $100 a month and received an appreciable increase from time to time.

Again the selling fever seized me. I wanted to go out on the road and place orders for steel, for I had in my spare moments concentrated on learning the steel game. It was a business that appealed to me in every respect. The more I looked into it the more I became infatuated with it, and I felt that I at last had found the proper niche in life. Two years of my life had been spent in the mill, and there wasn't an intricate phase of the business that I didn't tackle with supreme confidence. Confidence, I believe, is what many business men confuse with concentration.

I went on the road and I made good. I say this with pride, for I was an exceedingly young man to buck up against the arguments and the selling knowledge of the veteran salesmen who were selling the goods of our competitors. While I was away on one of these trips for the mill the directors of the company had a meeting, at which I was elected treasurer, one share of stock being given me in order that I might qualify. Many long hours of the night I spent at the mill with the superintendent, going over the plant thoroughly and acquiring a steel education.

So successful were my invasions in the steel market that I finally was boosted to the head of the sales department, a position now dignified by the term "general sales manager." You see I had knowledge of the manufacture of our product, how the material was prepared, the different qualities of materials for different classes of work—all details connected with the producing end. Thus I was able to talk steel, its ingredients, and its future. In brief, I knew my goods—I was not a mere order-taking machine.

Unfortunately our mill was badly located, being on the Ohio River. About the only time we could profitably operate was when business conditions all over the country were above normal. The mill had been leased for five years. At the end of that time we closed down. We were a mile and a half from a railroad. I was the last man on the grounds. I stuck and disposed of every ounce of material we had.

I returned to Pittsburgh jobless. Going south, I took a little flyer in the cotton business. Ague and fever got me, and I went back to Pittsburgh. I simply counted this a lost year and began all over.

I found employment as general sales manager with a big iron concern, manufacturing what is known as fine finished sheet steel. They took me in because they had built a new mill, which turned out exactly the same steel as the original mill, and they wanted me to create a market for the output of both branches. They knew my history and my ability, and it was because I could go out and land orders that the job was created for me. I worked hard on this new job, going as far west as Omaha and as far east as Boston. I kept both mills busy with the generous orders I captured. For five years I devoted my time to this concern.

I had accumulated a few thousand dollars in these years of hard work. I wanted to get into harness for myself, where my money would earn more than it would on investment in notes and mortgages. The directors knew my ambition and suggested that I take the interest of one of the retiring partners. I told them I'd be glad to, as the mill was a going concern, making big annual profits and paying commensurate dividends.

I went on the road for a three weeks' trip, and while I was away the stockholders got to fighting among themselves as to who should take over the shares of the partner. My trip was the best I ever made from a sales standpoint, and I went back to the mill feeling jubilant. One of the first things told me by the president was that, in the general melee, they had been unable to save any of the stock for me. I told him that meant my resignation. The president said no; he wanted me to stay with them, and he'd see that I got a substantial increase in wages.

I replied that I would work for nobody in whom I did not have absolute confidence. "I do not work for a salary," I said. "I work for people because I like them and because I enjoy working and being associated with the business. You've destroyed my confidence, and it would be a loss of time for me to continue in your employ." I resigned.

I applied to another Pittsburgh iron company for work. This was a larger and more dignified institution; one of the best in the country, in fact, and the only mill in the United States that ever made a success of planished iron, the blue iron found in locomotive jackets and on stove pipes. About forty sheets of this iron are brought to a cherry red heat and hammered, the friction between them polishing it. In Russia this is hammered by hand and made by convict labor.

The president of this company insisted that I confide my grievance to him. I did so. Then he said:

"Merritt, we've got a plant a few miles from Pittsburgh grinding out common sheet iron. You know the processes and formulae for making fine, high-finished sheets. We'd like to convert this plant into one that will turn out just such material. You know how to do it. Will you take charge up there and make the desired changes? It means money for both of us."

I told him I would if the superintendent of that plant was a man who had the interests of the concern at heart and would follow out my instructions. The president replied that the superintendent would work under me, or they would get a superintendent who would.

The superintendent proved to be a chap who was up to the minute, and he worked hand-in-glove with me. I went to work in earnest, and within a year we were making as fine-finished sheet steel as could be found in the country. Possibly it was a little better grade and finish, for we steered a lot of stove-pipe business away from the concern I formerly had been connected with. For this work I received $3,000 a year, nothing fabulous compared with the present-day compensation.

Having practically put the plant on its feet, I became dissatisfied with the small town in which it was located. The president wouldn't countenance my leaving, so I was put in charge of the Pittsburgh office, representing both plants. I stuck to this job for five years, and put away, counting what I previously had saved, $20,000. With this much money to my credit and still possessed of the craving to become my own boss, I went out among my friends and organized a company for building a steel plant and rolling mill in the natural gas belt of Indiana.

We constructed this plant, and had it in operation in 1892. The following year witnessed the bank panic of '93. We had to brave the perils of that year without having the advantage of a big start. It was a tremendous undertaking for a new company. No two directors of our company lived in the same town, and the responsibility for the profitable operation of the entire business fell upon me. When the panic was at its worst—on the 1st of August—I had my plant in full operation.

In January and February I used a little common sense. Already the advance heralds of the oncoming panic had sounded their cries of warning, and I had gone out into the market and sold everything I could on contract when prices were high, deliveries to be made throughout the year.

For a time I really didn't know how we were going to meet our pay-roll. I thought I knew enough about the steel

business to sell at the high price, for in this way only could we obtain the advantage of operating our plant while most of the other mills of the country were forced to shut down.

Having seized time by the forelock and assured the uninterrupted operation of our plant, the only thing I had to worry about was the paying off of my help every two weeks. Our pay-roll at that time amounted to about $18,000, and wages had to be paid in cash. We had five hundred men working for us, tonnage men averaging $3 a day and other salaries running as high as $20 daily, according to the amount of work turned out and the skill of the workmen.

Things were running along beautifully, when the Indiana bank with which we had our account went to the wall. Our capital was tied up for over a week, and the only way we succeeded in getting money enough to pay our men was through quick trips I would make—weekly or semi-weekly—to Chicago and St. Louis. On these trips I sold material to my customers—many of whom were hardware manufacturers—for cash. Even then there were few who had the ready money with which to pay for what they bought. But I managed to stem the tide.

We shipped steel and iron only to those who paid cash, their orders being, in many instances, drawn against the contracts I had had the foresight to make early in the year. We sold quite a lot of goods to people who couldn't get them anywhere else, because for about three months ours was the only mill in full operation.

Our men didn't lose an hour's time during the entire period of the bank panic, and we didn't ship out a ton of goods on credit. We had considerable outstanding bills we made no effort to meet. Also we had much money tied up in bills receivable on material shipped before the panic which we couldn't collect. I met our creditors personally, explained the situation, and told them they would have to wait for the money we owed them until the money other people owed us came in.

We made a good profit during all the summer and the remainder of the year, while the other mills were idle. By keeping our plant going, we worked off many tons of high-priced raw material on which there otherwise would have been a big shrinkage. I took pride in knowing that, through the use of a little common sense and forethought, I had saved our company from going into bankruptcy. By the following July we were on our feet, had paid off all our outstanding indebtedness, and declared our first dividend.

I continued to run our plant successfully, our business increased steadily, and we never lost a single day for lack of trade. A few years ago, during the general consolidation, our plant was absorbed by the American Sheet Steel Company.

The big gun of this corporation called me to his office one day.

"Merritt," he said, "I want you to take what I'm going to say to you in the right spirit. I'm a man of few words, and I always speak from the shoulder. 'Never mince words' has been my motto ever since I entered the steel game. You're a mighty valuable man. I don't think there's a person in the business today who knows as much about steel and steel-making as you do—and I don't except myself either. You've got to stay with this company and give us the advantage of what you know and of your ideas. You never know when a panic is going to hit you. One might come along any day, and the way you handled the situation back in '93 convinces me you could do it all over again. You're our general western manager from now on."

Such a talk with the biggest steel man in the world—from my point of view—was gratifying. It repaid me for all the long, bone-racking hours I had put in at bookkeeping and in learning steel. I stuck for a year, and then the fever again got me. I just couldn't work for anybody else.

I went out and scoured the city of Chicago and got together a crowd of men who were business men from the ground up. They were connected with a steel plant just a few miles outside the city limits, and the result of our first conference was that a new plant was erected at Indiana Harbor, on the lake front. The choice of this location was the outcome of long argument on my part. I finally had my way, and I chose the present site because of the railroad and water transportation facilities, which meant the saving of much money because of the low hauling charges.

Our company there was organized for $200,000. Later, from a stock dividend we increased this capital stock to $300,000, and when we sold out, a few years ago, we had a surplus of over fifty per cent. I made quite a lot of money during those nine years of continuous operation, and with every cent I got hold of I bought stock in the steel company. Whenever there was any offer of stock that I could handle I would buy it at whatever was the market price, using the stock I already had paid for and the bank's collateral for borrowing money in order to pay for the new stock. That is how I increased my holdings in steel. When we disposed of the plant I was one of the largest stockholders.

Perhaps a word on salesmanship would not be amiss before I close this frank interview. I attribute my success in selling steel to the fact that I never took advantage of a customer, never made a misrepresentation, and always did what I told my trade I would do. I kept tab on the trade, and when a customer was in the market I knew what kind of steel he wanted. The study of steel products which I had made in the mills made me thoroughly conversant with the manufacture and the physical properties of the steel work to be done, and when I talked with a customer I was able to adapt the quality of steel to the work he was to undertake.

You'll find a lot of steel and iron I sold scattered all over the universe. It's to be seen in refrigerators, refrigerator cars, roofing, building sidings, stove pipes, stoves, tools, nails.

You'll also find that, because I knew my goods, I was able to pull off the biggest individual sale of sheet steel ever made. This one order weighed 1,500 tons, and represented a cash outlay of $105,000.

So there you are. Make whatever yarn you may out of my career, adhering to the facts. Hard facts, I have found from observation, generally make good reading. What a man does in fiction and in actual life are mightily different propositions. After all, it isn't such a far cry from a Pennsylvania farm to the vice-presidency and general management of one of the world's biggest business institutions. What I've done any young man could do if he applied himself. Term my own unvarnished career the result of concentration or of determination. What does it matter? When you once take the business bull by the horns you've got to throw him or be ground to death beneath his hoofs. If a man has the true business instinct, the happiest moments of his career are when he is battling to keep pace with or forge ahead of the other fellow. Other moments herald the coming of failure.

Young men of the present generation know nothing of romantic business. They've been swayed by circumstances to which, for the most part, they've adjusted themselves. Some of them haven't seen the necessity for adjustment. Witness the street sweeper, the coal heaver, the hod carrier—derelicts of human endeavor who have steadfastly refused to see the light; hulks of men who will continue to grope, in all probability, until death puts an end to their muscle-strained careers and failure, victorious, starts in pursuit of other flotsam and jetsam.

In the days of older generations, so the narrative runs, romance stalked through the highways and byways of the universe. Defeat was an unknown quantity in those halcyon times, and perseverance, pluck and energy formed the

nucleus of big attainment. Achievement was the result of battle—conflicts of brawn and brute strength, cunning and perceptive wit.

Romance? Why, in the olden days it was a pronounced synonym for business. It strolled hand-in-hand with adventure. It sought out the rough passages, the unblazed trails, and accomplished things—big things. It stood for zest, vigor, enterprise. The generation immediately preceding the present one did not feel the keen cut of adversity's blade, the hot sting of backwardness. It was a generation of men, big men, whose taut sinews were pressed against the wheels of progress until the rim seared, bruised, and oftentimes lacerated. But the wheel moved on apace; it was not permitted to settle back into the rut from which it had been rolled.

Romance in business no longer exists. Opportunity has supplanted it. The steel rails of progress now wind their glittering serpentine bodies across the researches of the universe. Machinery and modern practice thrill the globe with detonating grumblings. Science has bored its way through the tangled underbrush of past business forests.

DICTATED BUT NOT READ.

By Oscar James Vogl.

At a recent banquet of commercial men in Chicago, says "Patton's Monthly," a prominent importer of American machinery from Buenos Ayres told the story of a merchant in his city who received a letter from a concern in the States marked "Dictated but not read." He promptly returned the letter marked: "Read, but not noticed."

The notation, "Dictated but not read" on a letter is not only a breach of business etiquette, but an insult to the recipient. If you do not deem it of enough importance to read the letters you dictate, do not expect your prospective customers to read them.

If you cannot engage competent office help to entrust with the mailing of your letters, do not expect any prospective purchaser to trust you with his business.

If you intend to hide behind the phrase, "Dictated but not read," do not be surprised if your competitors get your trade and ridicule your business methods.

If your letter should act as a written representation of your business, as a mail representative, make it appear as well as possible.

If you would not engage a disorderly salesman, a slouchy traveling man, or an intoxicated collector, do not rubber stamp your letters, and for the sake of business etiquette leave off that line: "Dictated but not read."

Why the Advertiser Succeeds

By B. G. Newton

WHY is it that during the last few months when money was admittedly tight, the merchants who advertised the most felt the pinch the least?

And how is it that now, when the circulation of money is less restricted, the merchants who felt the pinch the most will be the last to experience relaxation and relief?

The same wisdom and foresight which prompts a merchant to advertise will naturally guide him in forming his whole selling and general business policy, and, like a good general, he is prepared for every contingency and emergency.

The fact that the successful business man is an advertiser is usually incidental. He is an advertiser because he is wise and possessed of good sound business sense and an analytical mind. At some time or other he came to the conclusion that advertising could be made one of the mightiest factors of his business organization, and having arrived at this conclusion, he just naturally went to it and advertised.

He had faith in the goods he had to sell, and his own faith manifested in a public way, inspired confidence in the minds of his prospective customers. His name and his manufactured product became synonymous with good service and satisfying quality. The public became acquainted with the merits of his line and familiar with its outstanding features.

Consequently, when conditions were normal, he secured a liberal share of business and received first consideration when purchases were made.

When money tightened and business was curtailed, he continued to get the lion's share of what was going. When purchases were carefully considered the advertised line received first attention and usually secured the order.

And now that the financial tide is coming back, the advertiser is getting the biggest slice of the business melon, simply because during those cloudy days of curtailment, his advertising message had been studied and absorbed at a time when the public mind was most receptive.

It pays to advertise if your line is good, and it pays to buy advertised lines, because they are invariably satisfactory. The general public have long been educated to believe that advertised goods are best. Can't you see that you are laboring, not only under a handicap, but under a cloud, if your goods and store are not advertised? Publicity dispels the cloud of suspicion and removes the handicap.

On the highway of success you can go as far as you darned please without fear of getting pinched.

"Some men resolve to earn a little more than they spend, and the wiser ones resolve to spend a little less than they earn."

What One Hardwareman Has Done

An Article Telling How a Local Market Was Developed—The Importance of the Local Market Should Not Be Overlooked by Hardwaremen—Monthly Horse Fair and Annual Poulty Exhibition.

Crowd Attending Horse Fair at Durham.

By Byron J. Morrow.

THE farmer is the backbone of the trade of the small town hardwareman. This is a self-evident assertion and there is no probability of its being disputed. It follows then that the hardwareman who has a good agricultural section to cater to should adopt every means possible to get closer in touch with the agriculturist.

The importance of the local market as a direct means of bringing the farmer into town and an indirect means of getting him to shop regularly is a point which is sometimes overlooked. There are any number of towns and cities in Canada where the market is allowed to languish or even to die out entirely. It invariably happens that the passing of the weekly market brings with it a cessation of growth, gradually turning into the condition of torpidity into which so many towns seem to have fallen. The reason is not hard to find. With the loss of the trade which an active market is bound to create, the commercial interests of the town suffer, and the inactivity of the merchants is soon reflected in all phases of town life.

WM. BLACK.

On the other hand, is it possible to point to a town which boasts a busy weekly market and which at the same time is not showing a healthy growth? We trow not. Certainly it is impossible to cite an instance where the possession of an active weekly market is not associated with a decidedly brisk tone in commercial circles. The weekly market is indispensable to the local merchant.

In some progressive towns the merchants are not content to confine their efforts for getting the farmer into town to the weekly market. They organize special sales and fairs with the object of bringing people to town with money to spend.

In this connection might be cited what the town of Durham has done; or rather what William Black, hardwareman, of Durham, has done. Mr. Black is an active, progressive, one might even say dynamic business man, who has a keen insight into the many problems which confront the merchant. In addition he has been four times mayor of Durham, and has an equally keen insight into the question of civic growth and prosperity. On both points he became convinced that what was needed was a closer relationship with the surrounding districts.

Accordingly the plan was adopted of holding regular monthly horse fairs. In an active publicity campaign, advertis-

his capacity as mayor, Mr. Black began ing the fairs aggressively and continuously. They were advertised in the local papers and by means of bills distributed at the weekly markets and throughout the surrounding country. As a result the fairs have become so well-known that not only do farmers come in from a distance of twenty to twenty-five miles, but buyers attend from Montreal, Toronto, and other cities.

The farmers have come to consider the Durham monthly fairs as the best opportunity offered of selling their stock at the best price. On one occasion no fewer than 78 horses changed hands on the streets in one day, and the average number sold during the course of the fair, while not as high as that, is nevertheless a large one. Just as a snowball rolling down hill adds to its size and increases in speed, so with the passing of time, the Durham fairs are becoming of increased importance.

Buy on the Streets.

The plan followed is to have the buyers stand on the streets and bid for the horses as they arrive. Animated scenes and lively competitive bidding ensue on the appearance of a particularly fine specimen. The advantage of this system is that the actual transactions are soon over with and the farmers have the rest of the day for shopping.

From the standpoint of the local merchant, great advantage is obtained from the general attraction which the fairs exercise. Hundreds of people come to town on that day who have no intention either of buying or selling; but all do more or less shopping during the day.

Mayor Black asserts that the amount of business which comes to the merchants as a direct result is considerable. On fair days the stores are crowded. The really important part, however, is that the people of the surrounding districts get the "Durham habit," and continue to do all their shopping in that town.

Other Fixtures.

The monthly horse fair is not Durham's only bid for increased farm trade, however. An annual poultry exhibition is held which also proves a big drawing card. Mayor Black is president of the Poultry Association, and one of the chief workers.

The last exhibition was held on January 15, in the town hall, and there were 450 birds shown.

A produce fair is also under consideration.

The Activity of Wm. Black.

A word about the "man behind" would be of interest. William Black was at one time engaged in newspaper work, being associated at various times with the London Advertiser, St. Thomas Journal, London Free Press and for four and a half years on the Montreal Star. Thus he secured a good grounding in the methods of what is undoubtedly one of the most aggressive branches of modern enterprise—the publishing business. When he returned to the hardware business, he brought with him many valuable ideas and principles acquired during his connection with the daily press. William Black is a "hustler," a man of ideas and the possessor of an inexhaustible fund of initiative.

For sixteen years he has been in the hardware business in Durham, and during that time has worked up a splendid connection. His aggressive foresight is best illustrated in the way that he retrieved a heavy loss sustained in a fire which destroyed his store on September 17, 1913. Out of a stock valued at $13,500 he was able to save only $650 worth of goods and the insurance carried was $4,000 only. While the fire was still raging, he stepped across the street and took a three years' lease of the store now occupied. With indomitable energy this store was fitted up and stocked and business was continued without loss of time.

Mr. Black's fellow-townsmen have such faith in his ability that they have elected him mayor four terms in succession, for 1913 and 1914 by acclamation.

Hardware store of William Black.

When a dealer secures a couple of hundred or more color cards, the supply is worth quite a substantial sum of money, and it should be handled as valuable matter. It must be handled so that the maximum results will be secured for the expenditure. When cards are given to people who cannot on any reasonable basis be judged prospective purchasers of paint, it means that the dealer will either have to refrain from giving cards to all his real prospects or apply sooner for a fresh supply.

Retailers can prevent price-cutting among themselves if they have a working agreement not to cut the prices on advertised goods. If in place of warring retailers would get together and occasionally confer, and then plan to co-operate, they could easily eliminate the price-cutting that kills profit.

Expanding Sales by Newspaper Publicity

How to Prepare Ads. That Will be Read and Bring Best Results—A Few Sample Ads.—Hardwaremen Are Advertising Extensively in Daily and Weekly Papers.

A FEW years ago it was often said that hardware men were poor advertisers, as far as newspaper publicity was concerned.

Such may have been the case a few years ago; but to-day we find that hardware men are taking a great interest in newspaper advertising, and some of the largest advertisements appearing in the newspapers are those of retail hardware merchants.

On the opposite page is shown reproductions of advertisements that have recently appeared in Canadian newspapers.

J. H. Glover, whose advertisement appears on the opposite page, is located at Aylmer, Ont., a town of less than 3,000 population. This advertisement occupied a space of 9 x 10 inches. This merchant believes in running weekly advertisements and offering special savings for Saturday, a plan that has been adopted by a number of Canadian firms. One good feature about this advertisement is the use of illustrations. The advertisement could have been improved in appearance by using a more uniform style of type throughout.

Glenn A. Henry & Co. are located at Oshawa, Ont., a town of about 8,000 population. This advertisement is an appeal to farmers to make use of the new parcels post system. The advertisement occupied full-page space.

Reg. F. Scott, of the Blue Hardware, is located at Guelph, Ont. This advertisement occupied a space 8 x 10 inches, and was prepared specially for a dollar-day sale. Dollar day sales are being held in various parts of the country, and hardware men are using a considerable amount of advertising space in featuring these sales.

Are Advertisements Read?

The question the hardware man asks himself is whether or not his advertisements are read. If his advertisements are not read, he is losing a large amount of money, which he is paying to his newspaper. There is one thing sure, and that is, he should not undertake newspaper advertising unless he can see his way clear to give his advertising the time and thought that it deserves. Newspaper advertising if properly applied will pay big dividends; but if neglected, will be an expensive luxury, bringing little or no returns.

In the busy newspaper office time is at a premium. Too much attention cannot be given an advertisement to ensure an attractive appearance. Usually the newspaper ad.-man arranges the type matter so as to be identical with the manner in which the copy is written. It is therefore left to the advertiser to see that his copy is so written as to produce an attractive appearance when printed, or else to have a "lay-out" sheet accompany the copy, so as to make clear the desired arrangement of the type matter. The advertiser should see to it that his ideas are so clearly expressed on the lay-out that the best possible ad. may be composed—

(1) That, when completed, the advertisement will not only be typographically harmonious, but will stand out in a striking and irresistible manner—

(2) That it will be filled with characteristics, suggesting progress and sincerity—

(3) That it will awaken interest and eventually touch the chord that responds. In a word—

(4) That it will have practically the same effect on the reader that the business-creating salesman has on his prospective customer in a personal interview.

How to Secure an Attractive Ad.

Generally speaking, an attractive advertisement is one which is composed in an easy-to-read style, using judiciously a liberal amount of white space and enclosing it all in a simple and appropriate border. Only a very few points should be displayed, and these the most important in the advertisement. Too many emphasized lines promote a confusing and repulsive appearance. The text matter should be set in a legible, light face type, and broken up into short paragraphs.

The main display lines, or illustrations, if any are used, will present a more pleasing appearance if placed a little above the centre of the advertisement. The border should be subdued in tone—that is, slightly lighter than the display type, and a liberal margin should also be left between the border and type.

While there are many other ways in which an advertisement may be set and still be attractive, it is a noteworthy fact that the most appealing advertisements usually conform to the above rules.

The Need of a Good Lay-Out.

Judging from the appearance of many newspaper ads., it seems that few advertisers accompany their copy with a lay-out sufficiently clear to give the printer an intelligent idea of just what is wanted.

So much depends on having the position of every line of type clearly defined that it will be necessary to sketch the exact width and depth of the space to be used and handprint all the other data. Letter the important lines to show the approximate size of type, and it is also a good idea to specify the style if possible, or attach a printed sample of the type alongside of the hand-drawn line.

Proofs of all cuts should be pasted in the exact position they are to appear in the printed ad. If the proofs of cuts are not in hand, indicate the exact size of the space they will occupy, and in that space mark "cut to come" or "cut herewith," with the number or some little description of the cut.

All that now remains is to indicate the width of the lines of solid type, and this should be done by drawing horizontal lines. The lay-out now presents a fairly good idea of how the ad. will appear when printed, which is precisely what a lay-out is for.

A Few Common Faults.

One of the most glaring faults to be found with present-day advertisements is over-emphasis. If you will look over the ads. in your local newspaper you will readily see that for every one that stands out in a dignified manner, courteously displayed and delivering the message in a clear, simple, and concise way, you will frequently find a large number of inapt makeshifts. Ads. overburdened with large, bold-face type or underscoring, not only weaken the ad. and confuse the reader, but usually fail to feature the essential points intended to be brought out.

Ads. laden with bent and twisted rule work, unattractive ornaments, irrelevant borders, meaningless illustrations, etc., surround the ad. with a repellent atmosphere and greatly minimize its pulling power by not utilizing the space thus wasted for effective display and legible text matter.

Everyone knows, and especially the ad. writer, that repeated exaggeration in any form not only becomes monotonous, but it encourages suspicion. The kind of advertisement mentioned above "sticks out," to be sure, like a sore thumb—but in every way is just as useless.

Recent Advertisements of Canadian Hardwaremen.

How Paint Color Cards Are Made

Trip Through the Printing Plant of a Paint Manufacturer—Showing How Paint Color Cards, etc., Are Made—Color Cards Are Expensive to Produce—Tons of Paint used in Production of Color Chips.

ONE of the most interesting developments in modern methods of doing business is the careful attention to advertising plans on the part of many of our most aggressive and successful manufacturers. In some cases, this end of the manufacturer's work has grown to such proportions that not only has a complete advertising department been found necessary but also a large printing department to carry out most efficiently the plans decided upon. Probably one of the largest and most interesting plants of this description in Canada is that of the Sherwin-Williams Co., which is located at their main plant in Montreal.

I think most hardwaremen will agree with the statement that of all the lines distributed through the hardware store, the paint and varnish lines are probably backed up by more aggressive advertising and more effiecient co-operation sales plans than any of the other products handled.

A paint manufacturer has more reason for a private printing plant than a great many other manufacturers. In order to sell paint, it is very necessary to distribute color cards, and hundreds of thousands of these are manufactured and sent broad-cast throughout the Dominion by some of our leading paint houses. These color cards are quite expensive to produce. The printed form alone is the least expensive part of it; the preparation of the samples and attaching them to the printed form is what costs the most, and such work requires special equipment that is peculiar to the paint business.

Our readers will find it interesting to take a trip with a representative of Hardware and Metal through the printing and advertising department of the Sherwin-Williams Co. It is run just as any other printing plant is run, and while its equipment is peculiarly fitted to take care of the printed matter such as used by a paint manufacturer, it varies very little from the equipment used in any up-to-date printing establishment. It must produce printed matter at the same cost or at a lower cost than any of the individual printing houses that are catering to the trade generally. It sucessfully does this and in addition offers many advantages to the company in the fact that the workmen become more or less specialized in the particular class of printing that is used by the paint manufacturer, and so perhaps, in addition to the saving by producing printing at cost, it offers additional advantages in the way of quick service and efficient service.

The printing department is made up of composing room, and a press room in which seven presses are constantly busy printing up advertising, stationery, etc., for the use of the firm. These presses are all driven by individual motor and vary in size from a small Gordon to a large Miehle cylinder press, and the equipment is capable of turning out anything from the simplest stationery form to the elaborate label in many colors, or the finest four-color process work.

Painting department where color sheets and paddles are finished.

Paint color card sampling machines.

The printing is the first step in the production of color cards, but two other departments have an important place and their work is of a nature only found in connection with a large paint and varnish business.

First of all there is the painting room. In this department several painters are busy all the year through, painting color sheets, the actual paint spread on paper, showing all the colors of the many different kinds of paints; house paints, buggy paints, wagon paints, enamel, etc. Thousands of these sheets are produced each month. These in turn are cut into small pieces or "chips" by large motor driven power cutters, and are carefully stored away in small metal trays for further use. Tons of paint are used each year in the production of these color chips and the number of chips themselves produced, runs up over the billion mark.

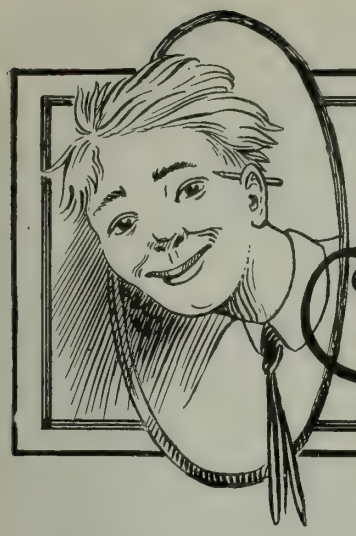
These color chips are stored in the painting and sampling department. This department is equipped with special machinery for the placing of the small chips on the printed blanks. It is only a few years ago that these chips were all attached by hand but with the development of the business during the past ten years, this became practically an impossibility, on account of the thousands of color cards required, and to-day this work is done very efficiently by an ingenious machine which is under the control of one operator, and which first applies gum to the card then by a clever mechanism, shifts the card to another part of the machine where it is brought in contact with the small color chips, which adhere to the gummed surfaces, and the completed card removed from the machine. In the old hand-pasting days, an expert operator could finish two hundred cards in a day, one of these machines will handle an equal number in an hour and do better work.

Very few hardwaremen have an idea of the expense and care to which paint manufacturers go in preparing color cards, paint paddles and other advertising matter, which is sent to the retail hardware merchant for distribution to his customers. We are taking our readers through the printing plant of a paint manufacturer, in order to show how the advertising matter is prepared, and in the hope that the Canadian hardware trade will realize more fully the true value of the color cards, etc., which they receive from the paint firms they represent.

In this same department there is a complete equipment for binding booklets, padding stationery forms, and the carrying out of all ordinary bindery work.

In addition to the painting department the Sherwin-Williams Co. also have a special finishing department in which all panel work is taken care of under the supervision of an expert finisher. Here various kinds of wood are stained, varnished and finished in all the different methods and processes of finishing that are in vogue to-day. This department makes it possible for the architect, the contractor, and the master painter to see the results that can be procured by the different surface finishes, the result of the manufacturer's investigation and ingenuity. A homeowner can select exactly the kind of wood and the kind of finish he wants in his own house—This is a service department and it is constantly producing finished samples and panels to show some effect that has been desired by a prominent architect or a fastidous homeowner.

And now we have passed rather hurriedly through the producing departments and before we finish our little journey, we will spend a few minutes in the department where all the finished color cards, booklets, stationery forms, etc., are carried in stock. In this department we find long rows of shelving filled to overflowing, with stationery supplies and finished advertising features. We also find that this department is handled just as systematically as if it were one of the large stock rooms filled with paints and varnishes awaiting the orders from the retailer. Nothing



Showing cylinder press in action.

is allowed to go out until a regular order form is received, and we notice that the company's representatives evidently order advertising (on the special printed forms), just as carefully as they order the goods. They study the merchant's needs and request only those advertising features that can be of service to the merchant to whom they are sent. These orders are carefully laid off on special tables, checked, packed in boxes and forwarded to the general shipping department where they go forward with the order of paints.

This is a very brief story of a department entirely complete in itself and yet altogether foreign in its character to the business of which it is an integral part. It is an interesting and convincing example of the tendency in modern business to control the production and manufacturing in any direction that is necessary for a successful development of the business.

Showing interior view of bindery.

THE JUNIOR CLERK'S PAGE

RISE OF A YOUNG MAN.

SOME years ago a young man left high school in his little town and took the first job he could find, which was clerking in the local hardware store at six dollars a week. There was one other clerk—an old fellow who assured him that he would not want to stay there long, because the town was dead and hardware a business with its future all behind it. The old clerk was right about the town, but wrong about hardware.

The new clerk soon got thoroughly interested in hardware. He read about it in trade journals that drifted into the store and soon began to see the general drift of the business. Hardware was passing through an evolution. Manufacturers and wholesalers were improving tools and explaining them to the public. Scarcity of labor and higher wages everywhere—in factories, on farms and even in homes—were creating a new demand for tools. The automobile alone had brought new ideas of tools to the public, for men who had never used tools before now took a keen interest in them and others who had known only woodworking tools were now learning the wider range of metal working tools.

Not only the trade was interesting, but here he himself stood right between the consumer and the manufacturer, able to see points the makers overlooked in the demand, and good features of hardware that were not evident to the public.

This novice designed a series of window displays in which hardware from the none-too-ample stock was grouped to bring out some idea interesting to customers. His first idea was picked up in talking to farmers—a windowful of one-man tools for farm use, such as one-man crosscut saws and handy hoists for lifting heavy things. Another was made up of hammers, saws, knives, meat choppers and other tools for housewives. There was a farm repair-shop, showing inexpensive metal-working tools for fixing farm machinery; and a good tea-and-coffee window, showing the latest percolators and tea pots.

To advertise these displays he wrote hardware manufacturers for circulars. The unsatisfactory nature of the circulars led him to ask why advertising was not improved, in certain ways he pointed out, to fit in with the demand as he saw it in that little town store. It was not long before a big manufacturing house perceived the value of that young man's self-generated interest in the hardware business and hired him for the advertising department—and to-day he is advertising manager.

LEARNING FROM MEN WHO KNOW.

WHEN a man begins studying a field of business in trade journals and technical books he will soon be led farther if he is really interested. These give him general priniciples and current news, tell him what the trade is driving at and who the men are that count in its activities. He will soon want to know some of the men, and there is nothing in the world to prevent him getting acquainted with them.

Men are rather widely overlooked as live sources of information even by people skillful in digging information from other sources. The ordinary course is to consult a book on the subject, or look over a file of periodicals in that field, or ask at the public library; but on every subject, and particularly in business, there are always men who know more than the printed literature.

It may be a question of selling life insurance, or running a department in a big store, or putting a scheme of bonus wages into a machine shop, or keeping freight cars moving more profitably on a railroad. No matter what, some man—usually many men—knows far more than the literature. He can clear up points that are obscure and answer questions where a book would be silent. He knows a great many things that have been left out of the books and can show what good practice will probably be tomorrow. Furthermore there is a human inspiration about a live man very stimulating to the seeker after information and not found in books at all.

The young fellow who selects a field of work because he likes it, and studies methods therein for the purpose of developing his own personal value, has every right to profit by what the best men in the field can tell him; and they will be glad to tell him much if he is intelligent and tactful in his inquiries.

Leaders in every field of business are constantly laying themselves open to his approach. They work out new methods, build up organizations, speak at trade gatherings, expound their opinions; and it all appears in journals devoted to their work. Their biographies are familiar to the trade, and their interests are laid so bare that the inquirer can pick them up at any point interesting to himself and ask them to throw a little more light on that point for his beinefit.

Mighty few men are too big or too busy to pay attention to the inquirer who says he is interested in them and their methods. Flattery, of course, would not touch them, but flattery is not needed if the inquirer is really interested. When he puts his inquiries honestly and judiciously he pays a compliment that human nature cannot resist. These men will give him information, and his interest in them will lead to their being interested in him. As fast as he can develop genuine personal value it will be in the market; and there is no reasonable limit to his development along that line, so long as he maintains his interest and keeps on investigating.

Hints on How to Run a Paint-Up, Clean-Up, Campaign

How to Launch a Campaign That Will Mean Business for the Retailer, Jobber, Manufacturer and Customers of the Retailer.

Written for Hardware and Metal by G. Darling.

THE object of this campaign is one which will interest every merchant—to increase sales without resorting to price-cutting.

Most cities have a retailers' association. Places where there is no association are generally small enough for merchants to know each other personally, and there is no need for an association. Such men meet constantly and discuss things between each other, which is the object of associations in the larger centres.

In order to conduct any general campaign successfully, harmony must exist between those taking part in it; such things as petty jealousy between business competitors must be laid aside, and all work for the general good. A meeting of all retailers interested should be called. This meeting should comprise everyone who sells anything which can be used in house-cleaning, gardening, painting and making the grounds and home beautiful, such as harwaremen, general merchants, seedsmen florists, furniture dealers, etc.

The object of the campaign must, first, be thoroughly discussed and understood. The need of a beautiful, healthy, fly-free city, town or village should be explained, and the value of such a place from an advertising point of view determined, for this is the basis of the campaign. The appeal to the people must be made through civic pride, hygiene, and the necessity of attracting others to the district. Nothing attracts intending settlers so much as an attractive, prosperous-looking place, and no place looks so attrative or prosperous as a clean and beautiful one. All the good work of the merchant in starting this must necessarily be hidden beneath a bushel, for once let people think of anything as an advertising dodge, more than half the strength of the appeal is lost. Let this be thoroughly understood at the meeting, for unless you get the correct idea in the beginning the plan will not be so likely to go right and carry so much force.

Having called the meeting and the object being thoroughly understood, let us decide on how to start the ball rolling. The campaign has been decided upon as a civic movement. That means it must be, as far as the general public is concerned, started by the mayor and council. A committee of your most influential men must be formed to approach the mayor and council, pointing out the benefits which will accrue to the town through being clean and beautiful, and asking them to father the campaign. Very likely the mayor will be one of your members, and that, of course, facilitates matters. In many cases it would be best to have the council father it, but that depends upon local conditions. So far so good.

A mayor or council might do almost anything, and nothing be known about it were it not for the press. Unfortunately the press is often a very sceptical party, and must be shown. The quickest and most certain way to obtain the individual support of the press is through its advertising columns. I say this without prejudice, for the press is supported solely through its advertising, and is very ready at all times to support a good movement in its locality, particularly where it can get a slice of honestly-earned money at the same time. Please don't think I am belittling the press; I'm not. I'm merely stating what is a universal fact; namely, we give the most and the best service where we get most in return.

You want the most and best service the press can give in this campaign, and you will get it in return for advertising. Let each merchant guarantee so much advertising to be used during the campaign, and you will have the support of their news and editorial columns. This is the only expenditure you will have, and it is an expenditure you would have anyway, without the tremendous value of a municipal campaign to back it up.

Now that you are assured of the support of the press, get the whole thing under way, beginning with the mayor's announcement that May 1st to May 15th (or whatever date you may decide upon) be set aside for a great municipal clean-up campaign. Have the papers publish bright editorials on the value of this on the day the announcement is made. You now have interest aroused, and this interest can be intensified day by day by other editorials and news items.

Things are beginning to move. Your school board can now be interested. Go to them, through the mayor or council and request that pages be read in all the schools by the teachers on the necessity of a clean home and a clean city. Get the children interested, so that Arbor Day will be a reality and not a farce. The children will have their influence on the home, and this influence is what you want. It means dollars in your cash register.

On the opening day of the campaign you publish your advertisements, not on a special page, but where you think they will attract most attention. Special pages are the invention of get-rich-quick johnnies, and are of very doubtful value to the merchant.

You have your windows dressed with seasonable articles:—Paint and varnishes, brushes, brooms, soaps, scrub brushes, cleansers, rakes, hoes, garbage cans, fly swatters and fly screens, wallpaper, flowers, seeds, kalsomine, furniture polishes, furniture coverings, curtains, curtain stretchers, etc. I don't mean to say that anyone would show all these things in any one window at once, but these are articles which are, to say the least, in keeping with the idea. Change your windows two or three times a week—make them talk with cards, prices and goods. Change your advertisements in the papers daily. Keep the interest you have aroused by your hidden work keen.

Have a confidential chat with your ministers, and suggest a timely topic for

The object of the paint-up, clean-up campaign as described here is to increase hardwaremen's sales without having to resort to price-cutting or bargain sales. The method adopted is to educate the public before hand, by an appeal to civic pride, etc., and thus strengthen hardwaremen's advertisements. Results will take the form of business prosperity and profits obtained by individual and team work. The campaign has been outlined by G. Darling, advertising manager for the G. F. Stephens & Co., Ltd., Winnipeg, better known to the Western trade as S. P. Gynk, editor Stephens Paint News.

their next sermon, such as "Cleanliness is next to Godliness"; "The moral effect of cleanliness," etc. Form a garden club if you haven't one already, a town planning commission, and a horticultural society amidst the town dwellers. Work. work, work and the results are sure.

One very important item must not be overlooked; that of imitation. We are as you know, very largely given to imitation, and on this characteristic rests many a fortune and many a failure. To imitate is human; if your neighbor has a thing you also must have it. This applies—and in making this statement I lay myself open to the accusation of lack of gallantry—more to woman than to man, although man is bad enough in all truth. On this trait, we can, as many have done, build a business. "How can I use it in this campaign? you ask. "Practice what you preach," is the answer. First paint your own store front, your delivery rig, your premises. Have them bright and clean among the first; the lesson will be tremendous, the suggestion it offers of immense value. Pull the mote from thine own eyes before you try to remove the one from your brother's. Show the community you believe in what you advertise, that you are a progressive citizen, and that you are also a wise man who knows that "paint protects property." Your own example is your strongest talking point. Your neighbors will imitate you, they'd be ashamed to do otherwise. It's not an expense, it's an investment.

Don't forget your wholesalers and manufacturers; they have attractive literature which they will be glad to give you and in many cases distribute for you. They can send you show cards, window trims, etc. They are willing and anxious to help; their advertising departments will write advertisements for you if you wish; they will get you hand bills printed and send you them at cost. In other words, they are glad to help those who help themselves. Their interests are bound up in your interests. Through you they must find an outlet for their goods, and when both are working to one end in harmony, results must come.

This paint-up, clean-up campaign is in the interests of all. You profit with your competitors, so do the wholesalers and manufacturers. There is business for all, and those who do their share, share in the profit. It's a general business brightener worthy of the greatest thought and determination to put it over. There has been too much talk of hard times in the past. Let's forget them and make the future rosy with increased profits. Make the cash register a music box instead of a funeral knell.

"Paintmanship"

An Article by Frank H. Brown, Advertising Manager, The Martin-Senour Co., Limited.

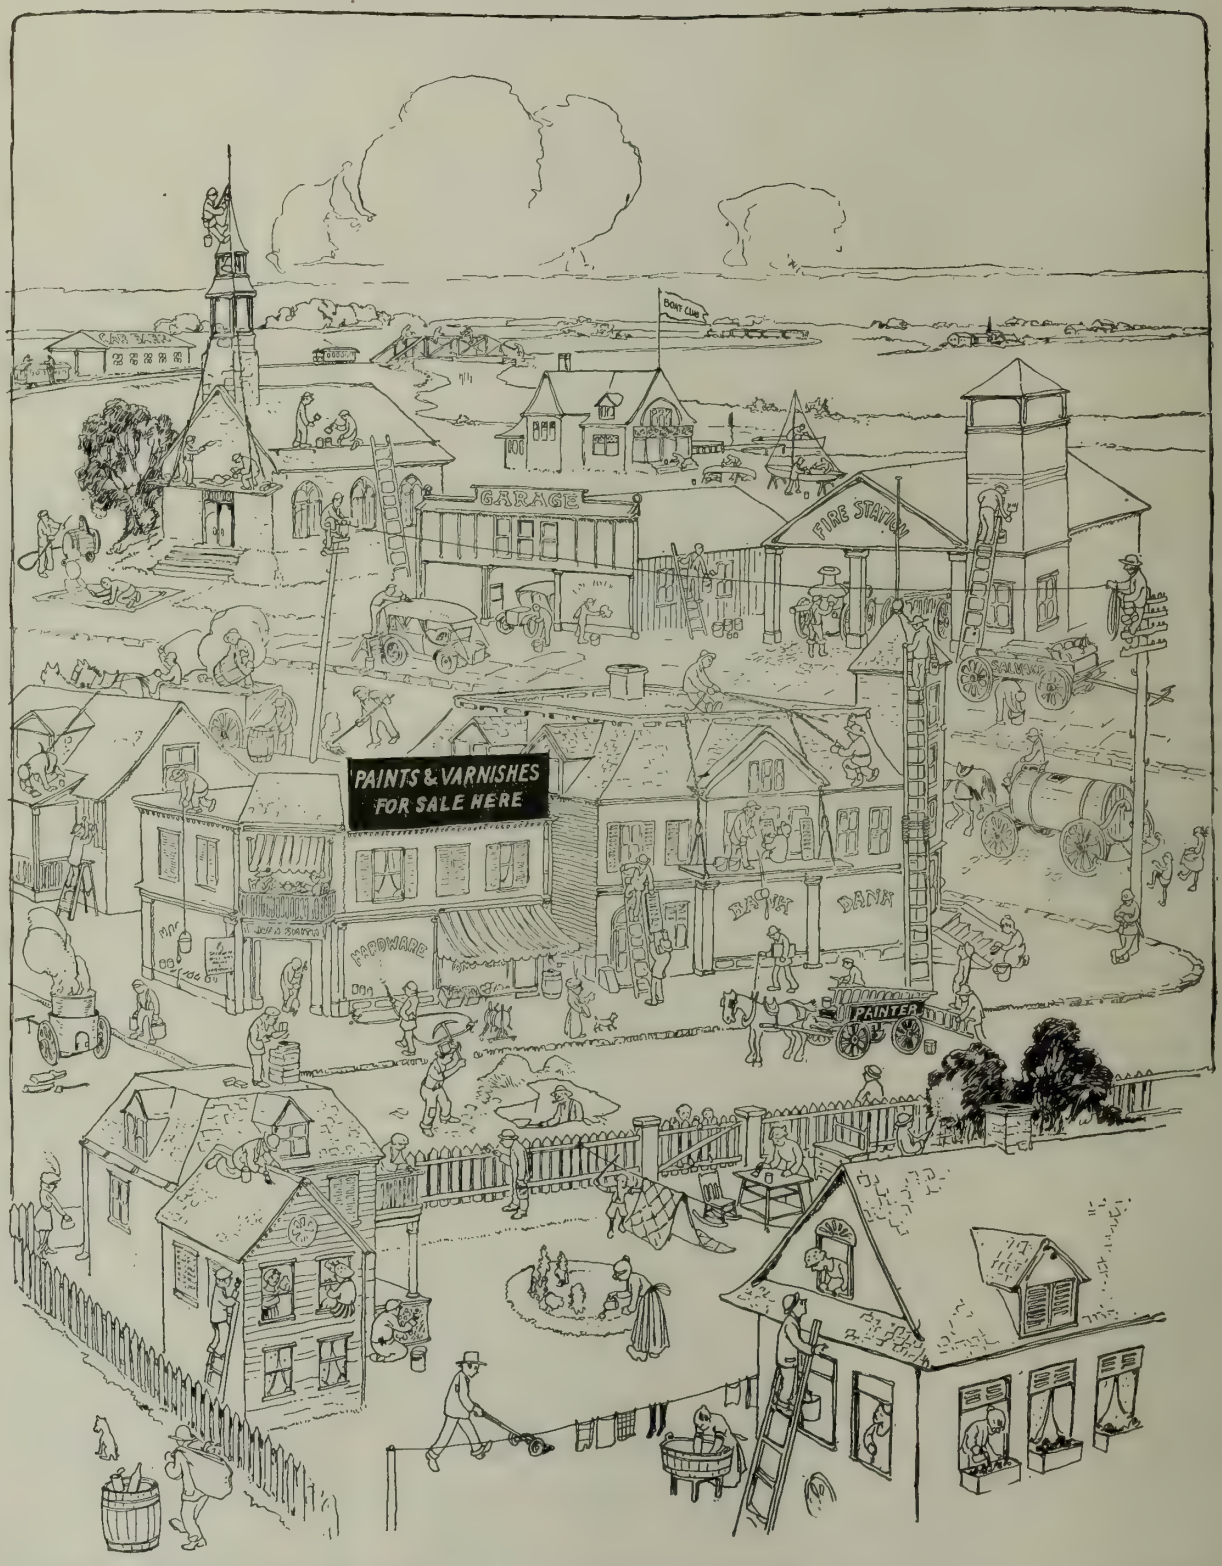
I HAVE been asked to write an article on "Paint Salesmanship," and as I start there seems so little to be said. A customer usually asks for what he wants, for everybody knows what paint is used for and the directions "How to use" are on the can. It seems like a case of wrapping up a package and ringing up a sale, and yet, as I think the matter over—"Paint Salesmanship," why, I find there is so much to be said, I hardly know where to begin.

Of the big variety of things in a hardware store, paints and varnishes are certainly the most interesting lines to sell. There is no particular accomplishment, or enjoyment, in selling a package of tacks, or doing up a pound of nails, but I have never yet seen a real salesman selling paint, who did not thoroughly enjoy doing it, because the selling of paint is interesting. It involves a study of which we can never know it all—we are always learning. The more we read, think, and talk about paint, the more paint knowledge we will have in store ready to be served over the counter, and there is always advancement for men who know. They earn more because they are worth **more.**

In every hardware store there should be someone well posted on paints and varnishes, for **knowing** in any line is Business Building, and no firm can permanently succeed unless they have somebody behind the counter with the ability to sell the right product, the right shade, the one best adapted to the needs of each particular customer. Good taste is the one essential to happy results, and as good taste is not a matter of money, but of choice, it pays to be able to make suggestions to a customer—that's service, and good service is always rewarded. A paint salesman—a man selling paint at retail, should be an expert adviser. When you get customers coming to you for advice on their painting and varnishing problems (the same as they go to their doctor and lawyer for advice, then will you occupy a different status and be paid accordingly.

Successful paintmanship is a matter of skill and artistic capacity. The value of color, harmonies, combinations, contrasts, the study of proportions, influences and modifying circumstances are all essential to be able to give expert advice to a customer. You may know how paint is made—what good paint is made of—understand that an inside floor paint will not give satisfaction on a porch, or that an ordinary mixed paint, thinned with turpentine, will not produce a flat wall finish, or that hard oil finish is not a good floor varnish, but in addition you must be able to give advice, not only as to what finish to use and how to proceed to secure best results for the purpose desired, but also, what color, or combination of colors, or shades, will produce the most pleasing effect—carry out some dominant theme and be complete, and satisfactory in its entirety. To do this successfully you must develop a personal interest in art to attain a knowledge of color values, deepened by a careful training of the eye to see and detect, or picture, in one's mind the various elements that have to do with the painting or decorating to be done.

Then, in addition to knowing what your customer should have, you should have the ability to tactfully influence him to accept your advice, because the customer will eventually find in it just what he needs, and whether or not your advice is followed at the time, you will one day be looked upon as an authority on matters pertaining to painting, varnishing, and finishing and thereby increase your paint selling ability and remuneration.



The merchant who expects to win out in these days of intense competition must hold himself responsible to the purchaser for all goods sold. He must mark his goods in plain figures and give the purchaser every opportunity to examine the goods and compare values with those offered by other stores.

It is a significant fact that while there are a number who claim to be the originators of the one-price system there are others who are coming forward with similar claims every day. This shows that these merchants realize the importance of impresing upon their customers their willingness—even eagerness—to do business with them on the square-deal principle. They understand the value of creating the impression that they are willing to do more for the purchaser than their neighbors.

A good store policy is the result of growth and it is only with considerable experience behind him that a merchant can evolve a satisfactory policy, one that will bring him the necessary rewards and give to the public the freedom and protection in buying that is required to make it mutually advantageous.

The Paint Up, Clean Up, Campaign

Painting Week—Showing how an aggressive hardware dealer has everybody doing it. Cut by courtesy Sherwin-Williams Co. of Canada.

W. H. WIGGS.

A Message to Young Hardwaremen

By W. H. Wiggs, President Mechanics' Supply Co., Quebec

"Seest thou a man diligent in business, he shall stand before kings; he shall not stand before mean men."

"'Tis not in mortals to command success,
But we'll do more—Semphronius,
We'll deserve it."

THIS article is written with the hope that it may help many of the youths of this great country to solve the problem of how to attain a successful business career. The boy or young man starting in life has but one supreme thing to offer to the world, and that is his own Personality. His father's influence or position may help him a little, perhaps, at the beginning, but other qualifications can either make or mar that influence.

First then as regards his Age. If he has chosen a business or mechanical profession he should not be younger than seventeen or eighteen. Previous to that he requires all the education and development of the mind he can attain. This is of incalculable value, its loss is almost irreparable in after-life. Once a good education is obtained, it can never be lost. It is a continuous and growing asset. The three R's—"Reading, wRriting and aRithmetic" are still the greatest factors in a good common-sense, every-day education, and form the corner stone of many a successful business career. The wisest of men has said, "Get understanding, the merchandise of it is better than silver and the gain thereof than fine gold."

If impossible (and don't let the boy have his own way in this) to remain at school till that age, do not lose the first opportunity to attend a night school. Even after leaving school it is well for the young man who desires to improve to attend a mechanical, drawing or educational class relative to the vacation he has chosen.

This leads us to the Choice. What shall I do with my boy? is an anxious question to many a parent. In this it is well to allow him to think the matter out for himself. Let him early learn to use his own initiative. Offer, however, your mature advice and endeavor to cultivate an ambition or inspiration in his mind. That should he choose to enter a Railroad office to become its President, should it be as a salesman, bank or office clerk to become the Manager, should it be as a mechanic, to be the best in the shop. "You cannot steer a boat that has no headway on."

Do not be a creature of circumstances. Have an object in life and concentrate all your energies to attain it. Discover your purpose. Throw your life into it, endeavor to be somebody, with all your might. If everything does not come your way at once, do not rush off to new fields. The young athlete who has absorbed into his very being the goal, and all that it comprises and requires, feels already the laurel crown upon his brow.. Emerson has said, "If a man can write a better book, preach a better sermon, or make a better mouse-trap than his neighbor, though he build his house in the woods, the world will make a beaten track to his door."

After the choice has been made, what are the stepping-stones that point the way to ultimate success? The first is Character. Again the wise man has said: "A good name is to be chosen rather than great riches." A name kept unsullied adds day by day to its lustre and worth. The basis of character is Habit. Cultivate, then, early in life, to do right, to exercise daily all the God-given attributes of our higher nature that go to build up a strong and vigorous manhood. "Every day is a little life and our whole life is a day repeated." Cultivate early the habit to think and act for yourself and thus obtain initiative ability which by daily usage is so increasingly strengthened that it finally attains its end. Cultivate also your physical, moral and intellectual side, learn to value time and money, and spend neither foolishly. It is needless to add that per contra slipshod thinking, carelessness in observation and reading, lack of physical exercise and regular hours, religious indifference, laziness, thoughtlessness, all help to undermine the superstructure of character.

The next stepping-stone is Perseverance. It is a conquering faculty, he alone triumphs who repeatedly makes use of it. Difficulties and temptations vanish under its influence. Reliability and trustworthiness are its handmaidens. Per contra, how many choose the easier way and yield to the tired feeling, to wasting time, to neglecting study on improvement of the mind, abandoning the desire for the higher life, forgetting that all this tends to form a puny weakling of but little use to himself or his surroundings. Master, then, by perseverance, the hard things in life, be thorough in little as well as big things. Subdue your lower nature and feel the joy of deliverance in this and of ultimate victory in all things. The world yields to such a spirit as this and recognizes its master.

"Persist if thou would'st truly reach thine ends,
For failures oft are but advising friends."

A third stepping-stone is Courtesy. Be a gentleman; you owe it to yourself and community. Disabuse your mind of the false idea that to be a gentleman your father's name must commence with a Van or finish with Esquire, or that his wife's name was Vere de Vere, or that you live in Portland Place and wear kid gloves, patent leather shoes and carry a cane, or that you can drink a glass of whiskey and soda or smoke a 25-cent cigar, and say "Damn it" in every sentence. None of these are the ear-marks of a gentleman. Cultivate higher ideals than these.

"To thine own self be true, and it must follow, as the night the day, thou can'st not then be false to any man."

Learn to be courteous and respectful to all, your superiors, your equals, your inferiors. Your treatment of the latter is generally the keynote to the former. Respect old and mature age, ladies and children. Practise this at home, and the habit there formed can be accelerated abroad. Be willing to take a secondary place, not always looking to get the advantage. Meet the world with a smile. Abhor underhand, mean or spiteful actions. Play the game fair. Another author writes: "Be agreeable, not intimate; pleasant, not offensive; open to instruction, not conceited; truthful under all conditions, and careful of your speech; make no promises which cannot be fulfilled."

Emerson says: "Give a boy address and accomplishments and you give him the mastery of palaces and fortunes. Wherever he goes he has not the trouble of earning or owing them, they select him to enter and possess."

Another and very important stepping-stone is Companionship. The influence of a good or bad companion will either make or mar your progress in life. Every boy of health and spirit has his friends. They are of two kinds, the helpful and the hurtful. When we older men look back over life's pathway, we can easily pick out those that have helped us along. Discriminate at the outset and by a manly independence, backed by your own convictions and aspirations,

assume the leadership. Pullman wrote: "Never say it is nobody's business but my own what I do with my life." It is not true. Your life is put into your hand as a trust for many and others beside yourself. If you use it well it will make others happy; if you abuse it, it will harm many others beside yourself."

Then, too, the choice of Amusements has much to do with companionship; both are leading factors in our lives. A few words as regards the former: Amusements can be readily divided into two classes, those which give diversion with rest to the mind and body, and those that give diversion with waste of mind and body. The first are wholesome, healthy and necessary; the second enervating, unhealthy and exhausting. In addition to your outdoor amusements, cultivate some hobby, such as music, drawing, photography, collection of minerals, of stamps or postcards, of coins, or anything to which you take a special inclination. Add to this Travel. See as much of this beautiful world as you can. Nothing so develops the mind and broadens the mental horizon. It is an unending source of pleasure and conversation. The money expended this way will more than offset the expenditure of time and money on theatres, cards, billiards, wine, cigars and such like. Don't, therefore, allow your amusements and companions to be a matter of chance or indifference, their influence is of too vital an importance in our lives not to give them the wisest consideration. Connecting all the stepping-stones together is Ambition. The world is spread out before you. Every occupation or position you can think of will some day be vacant. Who will refill them? The higher you ascend in life's scale the more room you will find at the top. But the world has no bargain-counter for these positions, they are only offered to those who can and have paid the price by a judicious use of the stepping-stones already alluded to. Competition for these positions is not severe, nor is there a crowd to elbow aside. It is not luck that bestows them.

"There is no chance; no destiny; no fate,
Can circumvent, or hinder or control
The firm resolve of a determined soul."

Good or bad fortune has nothing to do with it. Only the persistent converging of the characteristics heretofore alluded to will act in our lives as beacon-lights to the world around us.

"An institution is the lengthened shadow of one man." So will that shadow deepen in proportion to the light shed. The weakest living creature by concentrating his powers can accomplish something, whereas the strongest by dispensing his over-many may fail to accomplish anything. For the man who understands that success is simply doing one thing well, the way is clear and the end sure.

Emerson has said: "Greatness always appeals to the future. The force of character is cumulative. All the foregone days of virtue, work their health into this. What makes the majesty of the heroes of the Senate and the Field which so fills the imagination? The consciousness of a train of great days of victories behind."

"To every toiler, he alone is great
Who by a life heroic, conquers fate."

Underlying ambition is the great factor of concentration. Learn to do one thing well. Apply this first to yourself and then to your occupation. Carlyle has said, "To redeem a world sunk in dishonesty has not been given thee solely, over one man therein thou hast quite absolute uncontrollable power; him redeem, him make honest; it will be something, it will be much, and thy life and labor not in vain." Mind your own business, and again, mind your own business. A man of note states that no advantage results from telling one's business to others except to create jealousy or competition when we are fortunate, and to gratify our enemies when otherwise. Especially keep your business engagements as a private and sacred trust, and in like manner don't talk about your employer's affairs. And here comes in the question of Salary. The word salary is from the Latin "Sal," meaning Salt, hence the saying: "Not worth his Salt." Beware of coming under this category. Yet is is in your own hands, you alone make your worth, not your employer, by giving him increased value in time, energy, respect and such abilities as you command. The more you can offer the greater your value. Keep scrupulously to your bargains. When you make a bargain to work eight hours a day for $10 a week, don't give seven hours and a half. Is it honest to accept the pay envelope at the end of the week under these conditions? and what effrontery to expect an increase in salary at the end of the year!

Don't you think you should give your employer as much fair play as you expect from him?

Elbert Hubbard has said: "If you work for a man, in heaven's name work for him. If he pays you wages that supply your bread and butter, work for him, speak well of him, think well of him, stand by him, and by the institution he represents." Be alert—ready to go wherever asked. Don't ask useless questions—find out for yourself. If you know of an improvement in your employer's business, suggest it. Do things without being told, relying on your judgment, which can only develop by such usage. Take the initiative and be a leader, not a hanger-on. Keep rigidly to your own business and do not speculate on the outside. Never depend upon influence, but rely upon yourself and your power of commanding recognition; the circumstances that can make or mar you are to a large extent within your own control. Remember that two words are absolutely debarred for the business vocabulary, namely, "forget" and "excuse." When asked to do a thing, remember that your superior or employer is the best judge of what the capabilities of a man in your position ought to be.

Finally, make a confident of your employer; tell him your difficulties and aspirations. Ask his advice. If sick, tell him why; if going to get married, tell him when. He will esteem these confidences, and thus both will come to recognize that life is not all comprised between the hours the whistle blows or that the time register ticks off.

Learn to do well what you are told to do. The drawing of a dozen perfectly straight lines, or the adding correctly of a few columns of figures written out clearly and precisely, indicate a future successful bookkeeper or bank clerk. The dusting of the counter or the tying of a parcel point to a later good or bad salesman. The mechanic given a rough piece of wood or of steel to fashion to a given pattern shows his worth in the similitude of the finished product.

"What hast thou wrought is the world's demand,
What is thy product of brain or hand?
That produced, the wise world says,
'Take this place'—and the man obeys."

Again, the accurate delivery of a parcel or a letter, the use of the proper stamps, the putting back the ruler or the hammer into its place, the order carefully written out, the giving of a chair to a lady, the courteous reply, all small matters, you say, yet they indicate greater things for the future, and in the meantime show if you are slipshod, careless and indifferent. An invaluable aid in all this is the trade paper.

Let part of your first earnings be spent on a good trade paper or magazine; it will repay the investment a thousandfold. They are the greatest educational factors in business life in this age and of invaluable assistance to any one desirous of bettering his position, be he mechanic, salesman, office or bank clerk. They show the latest improvements, models, fashions, inventions in every occupation, and will some day help to show your employer that you know as much as he does in some respects.

A few don'ts to those who do not wish to succeed:

Don't do more than you can help.
Don't take any interest in your work.
Don't look for anything to do when not busy.
Don't keep to your engagements, take the next best one that offers without consulting your employer.
Don't keep your mouth shut about your salary or your employer's business.
Don't try to improve your mind or exercise your body.
Don't save any of your salary.
Don't come on time. Don't offer to assist.
Don't attend to your appearance.
Don't dust the show-case, it's the junior's job.
Don't mind the company you keep.
Don't read a trade paper.

All these will be found great helps to those to whom this article is not dedicated.

Some Hints on Retail Stove Selling

A Successful Stove Salesman Gives Some Pointers on Stove Selling—Gas Stove Season, With Its Opportunities for Sales, Will Soon Be Here—Advantages of Good Display Methods.

WE have now entered the spring season—the season of the year when hardwaremen and their sales-staffs are or should be at the highest point of efficiency. It is a season of the year when the trade, after a period of slackness starts forth to push campaigns for increasing sales and expanding business. The hardware merchant or salesman who does not feel enthused at this season of the year is indeed a dead one. The feeling of enthusiasm should extend through all departments of the store and activity should be in evidence everywhere. One of the departments which should be particularly active is the stove department. There are prospective stove purchasers during all seasons of the year, and the spring is a particularly good time to go after stove customers and push the sale of stoves. In selling stoves the salesman must know something about the goods he has to sell. He must be able to point out the good features of a stove, and point them out in such a way that the customer will understand them thoroughly. He must not talk over the customer's head.

Hunter Burgess, who is associated with Mitchell and McGregor, Ltd., Brandon, Man., and who has met with much success in selling stoves, offers the following suggestions for clerks:

"For a hardware clerk, a range is the hardest thing to talk about intelligibly. Very few clerks have seen a range manufactured, and if they were to spend a couple of days or more in any reputable stove foundry, they would be able to talk to a prospective customer from a positive point of view, instead of taking things for granted, as they often do.

"Too many salesmen in hardware stores to-day, when a customer comes in to look over a stove or range, in about as many words, they tell them it has a good big firebox, an eighteen-inch oven, a reservoir, and that the price is seventy-five dollars. When the price of the range ranges from $60 up, the price is the last thing that should be mentioned to the customer. Very often the customer will ask the price when first shown a stove, but it is easy to lead them off to some particular part of the stove, and thereby evade quoting them the price at this point of the selling argument. In dealing with a lady customer, one should dwell most strongly on the oven, as to its baking qualities, its cleanliness, and its being dust-proof. Secondly, the clerk should point out the convenience of the article. Thirdly, the fire box of the range may be explained.

"On the other hand, when selling to a gentleman, the fire box should be the very first consideration. You can talk breaking quality and melting quality of steel to a man and he will understand to a certain extent what you mean. You cannot hold a lady's attention very long with a firebox argument. To a man you can also explain how the body of the article is put together; how the linings of the flues are coated (if they are) to prevent rusting and to increase the life of the stove. In other words, things that would come first and last when selling a stove to a man, should come last and first when selling to a lady, except the price, which should come last always.

"Another thing, one cannot follow any set system in demonstrating a stove, that is, taking point by point, each time alike, except in cases where giving a practical demonstration, where you have a class before you that will sit and listen until you have finished. When selling a range to an individual customer, it is necessary to follow their mind, and to dwell on the points as they draw them to your attention. This to my mind is the most satisfactory way of holding their attention, and if they are fairly good prospects you can usually hold them long enough to show the main points of the article. Then comes the price, which they will pay if your argument has been effective."

The suggestions here offered have been tried out by Mr. Burgess and he has been very successful in making sales.

There is one phase of the stove trade which must be given considerable attention during the spring and that is the gas stove department. There is an ever-growing and popular demand for gas ranges, plates, gas stove ovens, etc. The early spring is the time to push the sale of gas ranges. During recent years there has been a heavy demand for high-grade gas ranges. A large number of customers are willing to pay a good price for a good gas range, providing, of course, that the salesman can point out the good features and show the prospective customer that the range is worth the price asked.

In order to be able to properly present the goods to the customer the clerk must study the goods himself and be prepared to put forth the best arguments in favor of the line he is selling.

Another important feature is the display methods employed. If you wish your customer to have a good impression of your stove department be sure and have your goods well displayed. If the customer is interested in gas ranges, it is very important that you should have your gas ranges in a well displayed and orderly condition so that they can be easily viewed and examined by customers. In the accompanying illustration is shown the gas range section of an up-to-date stove department. The gas ranges are kept separate from the other stoves and customers have plenty of room to move around and inspect the various styles of stoves on display.

Stove Department, showing separate section for displaying gas ranges.

Getting Big Business Out of Little Things

The Syndicate Stores Prosper on the Profits Secured from the Sale of Small Articles—One of the Secrets of Success in This Line is Display—What Hardwaremen Are Doing.

A RETAIL hardware merchant buys his goods to sell. To sell them they must be shown. The better the method he employs in showing them, the more he will sell.

Success in retailing depends to a large degree on the ability of the merchant to display his goods. One of the first features of display is to get the goods where they can be seen without looking for them.

You will find in nearly all highly successful retail stores that the goods are well displayed. Visit the department store—do you have to ask to be shown the article you want?—not very often. You will usually find it on display—waiting for you—you don't even have to ask the price.

Visit the 5c., 10c., and 15c. stores which are flourishing and rolling in profits in many of our towns and cities. Notice the manner in which the goods are displayed and priced. In nearly all cases you will find that in the latter class of stores the goods sell themselves. Witness the trouble the syndicate stores go to in order to keep their stocks clean, and to put everything where everybody can see it. The displays are always attractive and inviting.

These stores as a rule do very little advertising outside of displaying their wares in the show windows and in the store, and still they flourish—demonstrating the fact that display is indeed a great and mighty salesman.

These syndicate stores carry large stocks, yet in the majority of cases not asking more than 15 cents for any one article, are making big profits out of little things. Many of these little things are similar in most respects to goods carried by the retail hardwareman, and priced by him at almost the same price as that quoted by the syndicate store. Why is it that a hardware man will buy a dozen can openers to retail at 15 cents each, and take a year to sell them, while the syndicate store in the same town will sell double that number in one day at the same price?

The reason is that the syndicate store displays the goods and prices them in plain figures. The syndicate store educates its customers to come in and look for the goods. The syndicate store manager believes that there are only two kinds of customers, namely—the one who wants a thing and knows it, and the one who wants a thing and doesn't know it, and he caters largely to the latter class.

Many people enter the syndicate store merely to have a look around; they walk around the counters and display tables, and view the goods attractively displayed there. Before leaving they have made several purchases. They wanted the goods before entering the store, but they didn't know it until the goods were shown to them. And so the syndicate stores make big profits out of little things, by selling to people who in many cases want the goods but don't know it.

When these displays were first introduced by syndicate stores, there were certain merchants who laughed at the idea, and did not think it feasible.

There were, however, a few merchants who took up the idea and installed a number of display tables. One merchant in an Ontario town kept a record of sales from these tables, and at the end of the year he had a substantial net profit from this department alone. The small lines shown on these display tables usually carry a large profit, and still the retail price does not seem very high to the customer.

S. L. Adolph's store, showing old system of displaying goods. Note ceiling.

If the syndicate stores can make big profits out of little things, why can't the hardware merchant do likewise?

I have often seen a hardware merchant make as much profit on a fifteen cent can opener, or corkscrew, as he would make on a 100 lb. keg of nails. Profits are not always the largest in the big sales. Very often a small sale will yield a larger profit than a large sale of a line on which the profit has been cut by excessive competition.

Hardwaremen Active.

There has been a tendency of late on the part of many retail hardwaremen to push the sale of small articles, and in many cases they have been very successful. When the trade papers advocated some time ago that hardwaremen display certain lines in the same manner as they

An Example.

Just as an example I will mention one of the lines this merchant sold in large quantities.

Before introducing the table display system the dealer seldom sold door stops except when supplying hardware for a new house. The most popular line he had retailed at 35 cents per dozen. When he started displaying goods on display tables he filled one compartment with door stops priced at 3 cents each. Customers would come in, and in looking over the goods on display would often select from two to a dozen door stops at 3 cents each. He disposed of several gross of door stops by simply showing them to his customers in this manner.

Sales in other lines were also increased in the same way.

One of the retail hardware merchants who recently introduced the table display method of showing goods is S. L. Adolph, Listowel, Ont. Two views of Mr. Adolph's store are here shown. In the smaller cut we see the store under the old arrangement. In this view you can see goods suspended from the ceiling out of reach of customers, and the majority of lines of household goods cannot be seen at all.

Under the new arrangement the ceilings are cleared of all goods, thus giving the store a much brighter and neater appearance.

The chief innovation, however, was the installation of four specially constructed tables to be used for featuring small items at popular prices. The tables, which are double deckers, measure about 3 feet by 4 feet. The top section of two of the tables are divided into compartments. The tables are painted an attractive carmine color, and the cost of constructing them was reasonable.

On entering the store the customer first sees the 5 cent table. On this table is displayed in compartments a large selection of articles which can be retailed at 5 cents each. The next table is devoted to the display of 10 cent lines. The two other tables are used for displaying seasonable and household goods.

The compartments on the tables are made with removable divisions, so that compartments may be made up to suit all sizes and shapes.

The idea is to change the displays each week. One week 5 and 10 cent goods will be shown. The next week 15 and 20 cent goods, and so on.

"TO OUR READERS."

We want your opinion of this number. If you will offer suggestions, as to how improvements could be made, they will be much appreciated by us. If the issue comes up to your expectations, we would like to know. We have endeavored to make this issue as interesting and practical as possible for our readers, and we will much appreciate any comments you may see fit to make.

Some of the lines displayed last week on the 5 cent table were snaps, door stops, chisel handles, hame clips, nail brushes, funnels, egg beaters, cake cutters, picture wire, graters, basting spoons, etc.

On the 10 cent table were iron handles, potato washers, can openers, tack lifters, tack hammers, large graters, clotheslines, etc.

The tables being double-deckers, the lower sections are used for displaying oilcans, cream cans, pails, enamelware, etc.

Although Mr. Adolph has only had the tables in use a short time, he has made a large number of sales, and he feels sure of the success of his venture.

There is big money in the little lines, and hardwaremen in their eagerness to secure large orders should not overlook the possibilities for profits afforded by pushing the sale of the small lines, which, if displayed, will sell themselves.

PERSISTENCY IN ADVERTISING.

One stroke of a bell in a thick fog does not give any lasting impression of its location, but when followed by repeated strokes at regular intervals the densest fog or the darkest night can not long conceal its whereabouts. Likewise a single insertion of an advertisement— as compared with regular and systematic advertising—is in its effect not unlike a sound which, heard but faintly once, is lost in space and soon forgot.—Printing Art.

Some men are like the little boy who disliked his teacher because "she didn't teach him nothin' he didn't know."

S. L. Adolph's store, showing new method of showing goods. Note ceiling.

A Well-Equipped Retail Hardware Store

New Store of Adamson Hardware Co., Orangeville, Has Many Interesting Features—Store Not Over-Crowded—Rest Room for Ladies—Offers Cash Discount—Firm Sells Gramophones and Phonographs.

DURING July last year, the store of the Adamson Hardware Co., Orangeville, Ont., was almost totally destroyed by fire. A new store has recently been completed on the same site, the opportunity being taken to equip it in the most modern style, including several features which are interesting and unusual. By extending the store back, the floor space has been practically doubled. Particular care has been taken not to overcrowd, and to arrange displays, counters, and show cases so as to give the customer plenty of room to walk about, and to make a choice without becoming confused. The increase in the volume of business done during the past few years has warranted this extra expenditure.

One of the interesting features of the store is a rest room for ladies. Since local option came into force in Orangeville, most of the sitting rooms in local hotels have been done away with, and thus there remained no place where the wives of farmers could resort to for a wash and rest. When the Adamson Hardware Co. introduced this innovation, the ladies were a little nervous to make use of it at first, but eventually they came to look upon it as o sort of meeting place, resulting in an increase to the firm's business. Mr. Adamson considered the right place for such a room was in a dry goods store, but having taken the step, he is reaping the benefit.

The ladies' rest room is about ten feet square. It is built of beaver board, is nicely tinted and panneled, and furnished like a sitting room, with mirrors and pictures. It contains a large hot water radiator running the full length of one side, allowing several people an opportunity to warm themselves at one time. The furniture consists of a table with cloth, and several chairs. There are coat and hat hooks where wraps can be hung until wanted; notepaper and envelopes for writing, and newspapers and magazines for reading. A window allows anyone to look through the store to the front, so that a lady may see whether her husband has driven up or not. The floor is covered with oilcloth, and the door and window are furnished with green curtains.

In connection with the rest room is a toilet room, measuring 6 x 10 feet, in two compartments. In one is a wash basin and mirror, with towel racks, comb and brush rack, tumbler holder, and all the necessary conveniences likely to be required by a visitor from a distance. In the other compartment is a pure white closet. These compartments are lighted by colored leaded windows, and have electric ceiling lights. Both are very roomy. The rest room, as will be seen by reference to the plan, is situated at the rear of the store, on the right hand side, opposite the office. It is private, being away from the public part of the store.

The customer on entering the store, turns to the left to be served. Here are two large silent salesmen, the cash register, the counter, and lastly, in the

Interior view of Adamson Hardware Co.'s new store.

corner at the rear, is the office, which is about five feet higher than the floor, allowing the proprietor a clear view of the store. In the centre of the store is a clear aisle right through. On the right, the space is used for displaying washing machines, churns, baby carriages, etc. About forty feet of the right hand wall is occupied by shelving devoted almost exclusively to paint. Following this, there is a display of electric fixtures, at which point there is a recess, used for displaying plumbing goods ,and stoves. The corner is occupied by the rest room, which is ten feet square—about the same size as the office in the other corner.

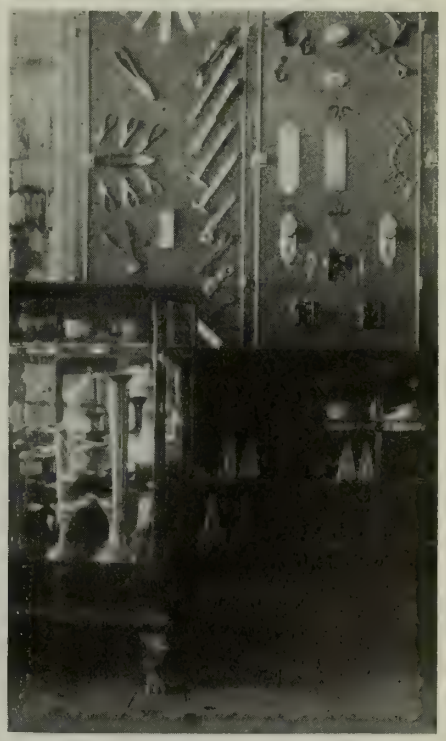
Turning to the shelving on the left hand side, where the hardware is stocked, we find as neat an arrangement as it is possible to imagine. The shelving is enclosed with large doors, covered with green felt, and sampled on the outside. Every third door is of glass, making a display case. The first glass case is used for cutlery, say, and the neighboring shelving devoted to cutlery and silverware. The second case is for tools, the next for builders' hardware, the next for guns, and the shelves for ammunition; the next contains plumbing goods, and bathroom supplies, and the last one, paint and varnish brushes. As far as possible, an effort has been made to arrange for each line of goods to be in one place. This makes of the work of the clerk simple, and does not confuse the customer. With this system, a clerk is enabled to dress one case at a time. On special occasions, such as Christmas, seasonable goods may be effectively displayed in these cases.

Beneath the drawers the shelving is again closed in as far as the point where nails are stocked, and is used for hinges, chains, and heavy goods. The hot air registers have not been located in the floor as in older stores, but stand vertical behind the counter, beneath the shelving. The smoke and hot air pipes run up through the shelves to the upstairs, and are also covered by doors.

View of part of tool racks and plumbing department in Adamson store.

The shelving on the right of the store is used almost exclusively for paints, varnishes and stains. The small drawers beneath are used for whiffletree fittings, etc. In the recess near the rest room is a full display of enameled ware, and space is also found for a glass-cutting table. On the wall is a tool rack for harvesters' tools, shovels, etc., while near-by are a number of stoves and ranges on view. The pillars are utilized for whip racks, which eliminate the bareness.

In the recess are located stairs leading to the cellar and upstairs. The cellar is used largely for storing glass, tile, iron pipe, nails, charcoal, roofing, etc. The tinsmithing department is located upstairs, and other space there is employed for storing harvesters' tools, tinware, oil stoves, etc. The tinsmithing department has a japanning plant and buffing machinery, used particularly for cleaning up goods injured in the recent fire. The department is equipped with a speaking tube connecting with the counter downstairs, and with all necessary tinsmithing and plumbing machinery.



An interesting device is used for telling whether the lights in the tinsmithing-room and the store-room at the rear are burning unnecessarily. Dummy lights, of small candle-power, are connected with the switches, and are located in the store. By this method anyone can see whether the men are upstairs, and if they are not, can see in a minute whether they have left without switching off the lights. The workmen often forget the lights, and the electric light bill is considerably reduced by these tell-tale lamps.

Mr. Adamson has adopted another electrical device which might be profitably copied by any storekeeper who is

Reminiscences of Early Days in the West

Western Hardwareman in Reminiscent Mood Gives Western Editor of Hardware and Metal Some Interesting Data Regarding the Early Days in the Canadian West.

THERE is little in Portage la Prairie, Man., to-day to remind one of the rough times experienced by hardwaremen in the late seventies, before the time of railways, years and years before wholesale houses of the East dared to send a traveler beyond Fort William. The stores that served in those days have all vanished, and strange to say, not even a photograph is left of the rough log huts in which nails were sold in those far-off days. The only thing that reminds one of pioneer times is the pioneer himself, who, when business is not brisk, will put his feet up on the counter, and let his mind wander back to those stormy times.

The western editor of Hardware and Metal called on T. B. Millar, of the Millar Hardware Co., Portage la Prairie, recently, and found him in a reminiscent mood. There was also another pioneer in the store at the time, in the person of S. R. Marlett, of Marlett & Dixon, who started the second general store in this town in the spring of 1871. He has long retired from business, and is spending his time on a farm.

T. B. Millar is still in the hardware business, which has continued to expand until to-day it is one of the largest of the four hardware stores in town. With him is associated his brother, W. Millar, both of whom are now well on in years.

Prices in the Early Days.

Mr. Marlett, who carried a large stock of china and earthenware goods in the early days, commenced by citing a few of the prices that obtained in those days. He brought the first Goderich salt into Manitoba, and sold it at $32 a barrel or 25c a pound. Coal oil sold at $5 a gallon; sugar brought the same price as salt, and the ordinary cup and saucer sold for 62½c. Cut nails brought 25c a pound, while lead pencils which sell to-day at 2c brought 25c.

Asked why so many prices were in uneven cents, Mr. Marlett explained that British currency was then in use here. Business was done mostly by barter for furs, buffalo robes, and pemmican. The only currency was gold and the Hudson's Bay "blanket," which was in denominations of a shilling, five shillings, and one pound notes.

Hudson's Bay Blanket.

The mention of Hudson's Bay blanket reminded Mr. Millar that he had recently seen one of these among his papers in the office. He forthwith made a search and found it, but the letters upon it were so defaced, it was only with difficulty read. It ran something like this: "Five shillings sterling, 1850. Hudson's Bay Company, No. 1163. I promise to pay to bearer on demand, the sum of five shillings sterling, at York Factory in Rupert's Land, dated first day of May, 1851, by the Governor and Company of the Adventurers of England, trading into Hudson's Bay." Then followed the signatures of A. Barclay, the secretary, and A. E. Pelly, accountant.

Getting Supplies.

In those days it was not possible to send to Winnipeg for a supply of hardware when it ran out. Twice a year it was necessary for the merchant to make a trip to Toronto or Montreal, and while there to buy several car loads of goods. The freight was per car load, and, if after order had been placed, the car was not full, the merchant would order it to be filled with some one line. Often when the car arrived at its destination, it would be found that the articles bought to fill space were away ahead of what would be required in Portage, and, consequently became dead stock. Some amusing stories are told in this connection.

The price of transportation in those days from Toronto to Portage was $15 for every 320 lbs. carried, and it averaged five dollars a hundred. That was in 1871. Prior to that the freight was higher, as by '71 the railway had been laid to the Red River.

The customers were mostly half-breeds, but later there came quite a number of Canadians from Huron and Bruce, and up to that time English settlers had not begun to come out. By the time navigation opened in the spring most of the stocks had become exhausted, and the inhabitants were looking anxiously forward to the arrival of the first boat at Fort Garry. The stores would probably run out of coal oil long before the winter had arrived. However, one looked after another. The man who had money would share it with those who had none, and everybody was happy. Mr. Marlett remarked: "There were no notes to meet at the bank in those days."

In those early days business came in spasms. One day a number of settlers would come into town, and the next day nothing would be done. The Millar brothers, like most of the others, were single men who lived at the hotel, and when business was dull would paste a notice on the window announcing that they had gone to the hotel. Customers arriving unexpectedly would go in search of the merchant. Things have been reversed in this respect.

When settlers arrived they bought heavily. Firstly, they would require a

Views of Saskatchewan Ave., Portage La Prairie, a tpresent time.

stove, and probably several. Then there was a full list of tools. Every man required a square, a saw, an axe and a hammer, and for the house he wanted utensils, and coal oil, and lubricating oil for his machinery, for as early as this mowers were being used. The reaper did not come into use until some time later. Later, when more and more settlers came, hardware stores would sell as much as a car load of oil a month, whereas to-day, since electric light was introduced, the demand has dropped to about two cars a year. J. O. Cadham, who now owns one of the largest hardware stores in the city, came shortly after the Millars, and can speak of the early hardware days in Portage.

The Millars started business in a log store, which they purchased for $950 from Lt.-Governor Shultz, a doctor, who had gone into the Indian trade, and had used this store for that purpose. The early log store contrasts strangely with the Millar store of to-day. It was low, and the stock was hung in great confusion on the ceiling. In 1882 he erected a frame building, which is seen in the accompanying illustration. Fourteen years ago the handsome block in which the Millar Hardware Co. are now located, was erected. The frame building measured 30 x 120 feet, two storeys high, whereas the present brick building measures 60 x 105 feet.

BROOMS.

Brooms have been used for three thousand years. Until the advent of the chemically-treated mop it was necessary to get down on your hands and knees to clean, dust and polish hardwood floors, linoleum, oilcloth, etc. With the advent of the sanitary mop it is now only the work of a minute to run the mop over your floors, around your rugs, and have the floors bright, clean and polished.

A WELL-ARRANGED STORE.

(Continued from page 173.)

located in a town where there are two sources of electrical power. Hardwaremen know to their sorrow that their lights are liable to go out at any moment should anything go wrong with the power plant, whereas a competitor across the way who is taking power from another company is enjoying good business and good illumination. In Orangeville there are two electric light companies. The Adamson store was supplied by one, and many times suffered disappointment when business was brisk, often at Christmas. Mr. Adamson induced the other company to connect up with his store, installing a double-throw switch, offering to use the systems equally. He is never troubled in this way now.

Returning to the description of the store: there is a large store-room at the back, used for storing oils, stoves, etc., which contains a cement slide, down which nails and other bulky goods can be easily run into the cellar. In the office there is a vault, set back into the store-room. The value of this was shown in the recent fire, when the firm's books were saved.

The store is equipped with three traveling ladders, two on the left, one of which travels on the ceiling and the other on the cornice, and another ladder for the shelving on the right. The windows measure four feet at the front and seven feet at the back, and are nine feet deep. The firm pay a great deal of attention to window dressing.

The cash register is a four-drawer machine, with motor attachment. Incidentally Mr. Adamson has an interesting scheme for inducing local farmers to pay cash when making large purchases. He gives a cash discount of 5 per cent. He also allows some of his customers three months' credit. When a farmer comes in for a stove he explains to him that 5 per cent. for cash, considering that three months' credit is allowed, means 20 per cent. for a year. A farmer sometimes does not take notice of 5 per cent. discount, but if he can be induced to believe that he is saving 20 per cent. he will pay the cash. This argument is effective in the majority of cases.

A new line which the Adamson Hardware Co. have recently begun to carry is that of phonographs and gramophones, with which they have been successful, the customers being mostly farmers. When customers are in, and the clerks are not very busy, one or two selections are given. Thus the clerks find out who are interested, and can usually arrange to take a machine to the house at night and give an exhibition of its capabilities. They also do a big business in house-wiring, and the sale of fixtures naturally follows.

The firm has gone under the name of the Adamson Hardware Co. for five years. The business has been in existence for thirty-five years, and J. B. Adamson has been connected with it for the past twenty-five years. He was born in Toronto forty-three years ago, and came to Orangeville at the age of 11. He served his time with A. G. McKenney, who then owned this business, and was successively clerk and buyer. Later it went under the name of Kelley & Marshall, then Adamson, Hewitt & Sproule, and five years ago became the Adamson Hardware Co. Associated with Mr. Adamson is J. A. Aitchison, chief clerk, who has an interest in the business.

Courtesy to customers is a stock-in-trade that pays Standard Oil dividends.

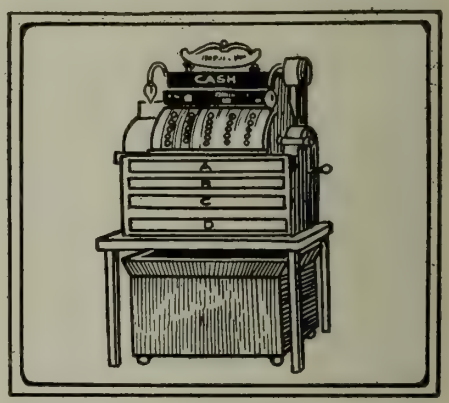
What Other Hardwaremen Do

Display stand constructed by clerk in a Barrie store.



REVOLVING SKATE STAND.

A clerk in the employ of H. H. Otton & Son, Dunlop St., Barrie, conceived the idea of a revolving skate stand as shown in accompanying sketch. It has four sides, which taper down to a pocket in which the pucks are displayed. The device is made of sheet iron, soldered so that the corners are rounded off smooth, with a triangular shaped top. The bottom has two braces through which passes a piece of 1¼-inch gas pipe to a considerable height, giving the stand stability. The bottom of the pipe rests in a flange joint, which is screwed or bolted to the counter. The stand revolves on a nut screwed on to the pipe, which rests on the flange.

Red and white enamel has been used in painting the stand and it presents a very attractive appearance. During the winter the stand is used for displaying skates and pucks. It can be used at other seasons of the year for displaying other lines.

WASTE PAPER UNDER CASH REGISTER.

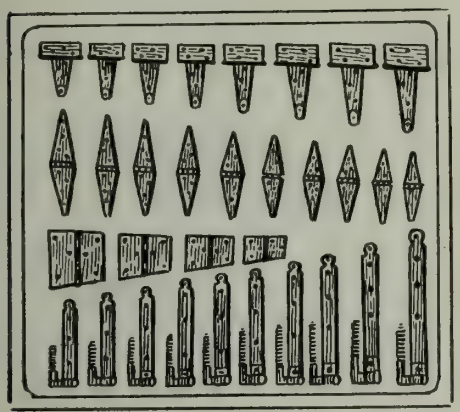
In a hardware store where so many articles are wrapped in paper there is liable to be an accumulation of waste paper, etc., which if allowed to be thrown on the floor gives the store a very untidy appearance. A useful arrangement for collecting waste paper has been adopted by the Adamson Hardware Co., Orangeville, Ont. A truck made of sheet iron, fitted with wood bracings and casters has been constructed and placed below the cash register as shown in the accompanying illustration. Near the top is a big pocket so that the paper can be easily pushed in. The idea is that the clerk when going to the cash register to ring up a sale, can carry any waste paper or other material that has been taken from a package and deposit it in the waste paper receptacle. When the truck is full it can be pushed out and taken to the rear of the store and emptied. The truck is constructed so as to go under the register and fit snugly like a drawer. It is very seldom that paper, string, packing or other material is seen on the floor of the Adamson store.

Adamson Hardware Co. have waste paper receptacle under cash register.

Hardware merchant installs drinking fountain at front of store.

DRINKING FOUNTAIN IN FRONT OF STORE.

A hardware merchant thought that he would like to have something in front of his store that would cause passers-by to stop. After securing permission from the civic authorities he installed a drinking fountain in front of his store. The fountain was constructed in such a manner that the water would only bubble up two or three inches above the mouthpiece. This prevented boys from tampering with the fountain and causing the water to squirt on passers-by or cause dampness on the walk surrounding the fountain. The dealer found that large numbers of passers-by took advantage of the opportunity to secure a refreshing drink especially during the hot weather. In order to cause the water to bubble up through the mouthpiece it was necessary to push a lever. When the lever was released the flow stopped and there was little or no waste. Outside of the cost of installation the up-keep of the fountain was very reasonable and the merchant figures that in the fountain he has a good advertising medium at a very reasonable cost.

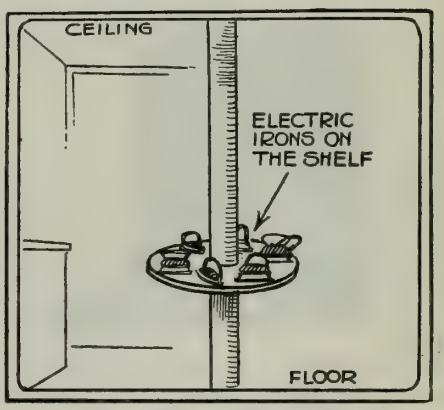


DEMONSTRATING POLISH MOPS.

A hardware merchant found that there was a ready sale for dustless mops, dusters, etc. He conceived the idea, however, that the goods could be more easily sold if demonstrations were given. He secured a piece of linoleum about three feet square. This was placed near a table on which was displayed dustless mops, dusters, floor polish and linoleum varnish. The table was placed near the entrance to the store and in many cases lady customers entering the store were attracted by the display immediately after they entered the store. Salesmen then had an opportunity of demonstrating the use of the mops. But the value of the table did not end there. The salesman also had an opportunity of interesting the customer in floor polishes and varnishes and many sales were made as a result. A neat show card was used to draw attention to the lines on display.

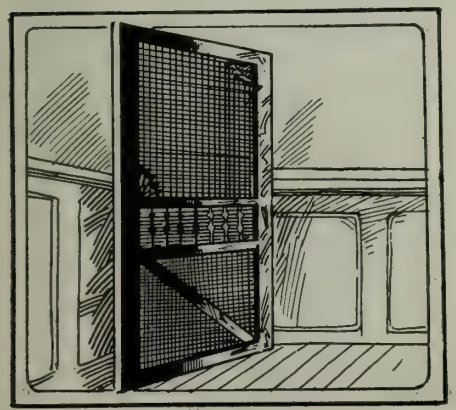
There has been a large sale for dustless mops during the past few years and the demand is still growing. Hardwaremen can help to keep up the demand by using the proper display methods. There is money in this line for the dealer who will push sales.

Dealer increased sales of polish mops by giving demonstrations.



Guelph hardware firm use hinge sample board for common hinges.

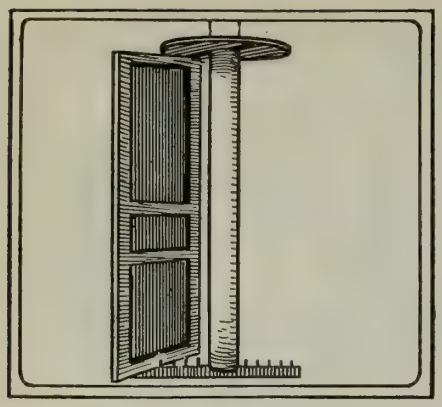
GUELPH FIRM USES HINGE DISPLAY BOARD.



The Bond Hardware Co., Guelph, Ont., use a hinge display board which saves the time of the salesmen and also gives customers an opportunity of seeing a large range of hinges at one time. A display board about 32 inches wide and 4 ft. long is used and the samples shown include screw and strap hinges, light and heavy tee hinges and light and heavy strap hinges in all the various sizes. The price per pair is marked in plain figures on all hinges with the exception of the screw and strap hinges which are priced per pound. Thus when a customer enters the store and asks to be shown hinges he can be shown a large assortment at once without the necessity of the clerk taking a hinge of each size out of the hinge rack. Every hardwareman knows the difficulty experienced at times in figuring out what customers mean when they ask for hinges. Outside of mechanics very few customers know the terms or names applied to the various styles of hinges, and the arrangement here illustrated proves very useful in not only saving time, but also saving customers from embarrassment.

MAKING USE OF STORE PILLARS.

In many hardware stores you find pillars which are used as supports for the building. In some cases they are also used for other purposes. In the store of H. Occomore the pillars have been used to good advantage. A round shelf three feet in diameter circles each pillar, and is held up by clamps bolted together on either side of the pillar. A sketch of one of the shelves is here shown, this one in particular is being used for displaying electric irons. This pillar is located near the entrance to the store and customers on entering cannot help but see the array of irons there displayed. Lady customers in particular are greatly interested in the display, and a large number of sales have been made from this shelf. In these days when hardwaremen are carrying such a large number of new lines, display space is generally at a premium. By introducing innovations of this kind extra space can often be obtained. Store pillars usually occupy prominent positions in the store and can be made to serve a useful purpose.

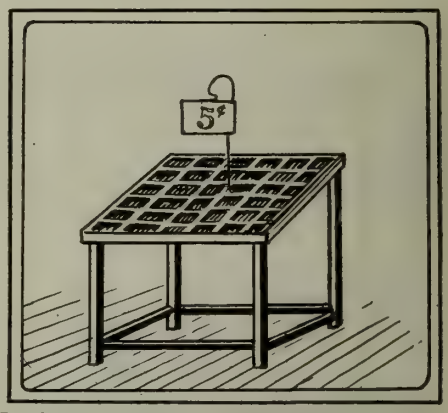


Guelph merchant makes use of store pillar for showing electric irons.

Partly-painted screen door increased sales of screen enamel.

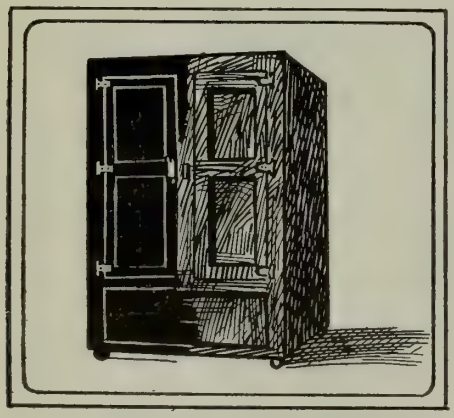
HOW A MERCHANT SOLD SCREEN ENAMEL.

A Western Ontario hardware merchant had a large stock of green screen paint on hand. He knew that the paint was a first-class article, but the stock for some reason or other did not move rapidly. He conceived the idea that if he showed his customers how old screen doors and windows could be refinished to look almost as good as new that his sales of screen paint could be greatly increased. He secured an old screen door on which the wire, although not broken, was very rusty. The wood frame of the door also needed paint badly. The merchant then asked one of the clerks to paint one-half of the door with the screen paint, and to leave the other half as it was. When the clerk completed his task he had one half of the door looking almost as good as new. The door was then placed in the show window. A show-card was also displayed drawing attention to the fact that the lives of screen doors and windows could be greatly lengthened by applying screen paint which was very reasonable in price. The dealer found this to be one of the best innovations he had ever tried for increasing the sale of a paint specialty line.



Same pillar used in summer for showing screen doors.

NOVEL METHOD OF SHOWING SCREEN DOORS.



During the summer months when screen doors are selling the same pillar is used by Mr. Occomore in showing a range of screen doors. The shelf is moved up as shown in the accompanying sketch. A strip of wood about ten inches long is attached to the under side of the shelf. Nails extend through the strip of wood and into small holes which have been bored in the top of the doors. A similar strip of wood with nails extending upwards is attached to the floor. The nails act as pivots on which the doors swing. A narrow strip of galvanized iron is nailed to the top and bottom of each door in order to prevent wearing away of the wood by constant friction when swinging. When the summer season is over the shelf is lowered and is used for displaying seasonable goods. There are several pillars in the store and each one has been made to do valuable services in showing goods. This method of showing screen doors is only one of the many adopted by retail hardwaremen. The screen door season is approaching rapidly. A swinging display of doors is useful and desirable during the rush season.

INCREASING SALES OF SMALL ARTICLES.

A London merchant recently installed a number of display tables similar to the one here illustrated. He is using these tables for displaying small articles of hardware such as are featured by the syndicate stores. Although the tables have only been in use for a short time many dozen 5, 10 and 15-cent articles have been sold from these tables. When a merchant stops to consider the large percentage of profit he is allowed to make on these small articles, he is forced to admit that there must be money in pushing the sale of the small articles. Take for example the chains of syndicate stores clearing enormous profits each year from the sale of small articles, none of which are priced over 15 cents each. In these days of keen competition the retail hardware merchant should take advantage of every opportunity to sell profitable lines. The London merchant has found the use of display tables an excellent method to sell small goods. He changes the dispays each week and always keeps them clean and tidy. Cards are suspended over each table from a hook made of No. 9 coppered steel wire.

London merchant increased sales by introducing 5, 10, 15c tables.

Partly-painted second-hand refrigerator increased sales of enamel.

DEALER INCREASED SALES OF ENAMEL.

A Toronto dealer last spring increased his sales of varnish stain and white enamel to a great extent by exhibiting in his show window a second-hand refrigerator which had been partly re-finished on the outside with dark oak varnish stain. He re-finished a portion of the provision chamber with white enamel and displayed the refrigerator in the window with the door of the provision chamber partly open. The very great contrast between the re-finished and the unfinished portions of the refrigerator attracted the attention of large numbers of passers-by. A display card in the window gave prices on various-sized cans of varnish and also quotations on the enamel in small packages. The same plan could be tried out on iron beds, baby carriages, sinks, baths, etc. The expense to the merchant for partly painting an article such as a refrigerator is not very large and the results in sales are astonishing. Show the people the goods you have, the results they will accomplish and you can make sales.

ISSUES ROAD MAP INSTEAD OF CALENDAR.

Instead of issuing calendars at the first of the year, Thos. Houghton, hardware merchant, Parkhill, Ont., issued a road map showing the various townships in the vicinity and the roads therein. These maps were issued for the convenience of farmers and show the various concessions, cross roads, etc., in which the farmer is interested. The map was attractively gotten up, and was well printed. The firm name appeared on the bottom of the map and an invitation was extended to recipients of the calendar to deal at the Houghton store. The farmers' trade is desirable and hardware merchants should always endeavor to keep in close touch with farmer customers. The season of the year is just coming in when the farmer will be in the market for many lines of hardware. Show the farmer that you are interested in him and the chances are that you will secure a large share of his patronage.

Hardware dealer issues road map in place of calendar.

Landing Profitable Business for the Tinshop

Best Work Can Be Accomplished During Dull Season—The Dull Season is the Time to go After the Best Business—Keeping the Shop Busy.

WE hear a great deal these days about the tinshop being a poor paying proposition. Every once in a while a merchant decides to sell out or dispose of his tinshop on account, he says, of it being unprofitable. At hardware conventions the subject is often taken up and men owning tinshops tell their experiences, showing how many customers look at price rather than quality, with the result that many cheap jobs are done at a sacrifice, instead of good work at a fair profit.

We also find merchants who conduct highly-profitable tinshops; in fact, the tinshop is the large end of the business with some concerns.

One merchant who conducts a large tinshop was recently interviewed by a representative of Hardware and Metal. In his store he sells stoves, enamelware and household goods, cutlery, etc. He does a nice trade in the store, which is a large one, but he stated that the tinshop was the big and profitable end of his business.

When asked how he accounted for this when others complained about the tinshop being a burden, he said: "I have at the present time, which is considered a dull period, fourteen men in my tinshop. Every man is busy. I am always on the look-out for new business. I do not look for cut-price jobs. I think that there is probably more room for 'salesmanship' in connection with the tinshop than in any other department of my business. When I quote a price on a job, I tell the customer exactly what he is going to get. I do not use 30-gauge iron where 26-gauge is needed. Very often I could undertake jobs at lower quotations than the ones I give, providing I used cheap material and lighter gauge metals, but this is against my policy. I use 'salesmanship' in my tinshop the same as in any other department of my business.

"Another feature which I watch closely is 'overhead costs.' I noticed a good illustrated article on this phase of the business in a recent issue of Hardware and Metal. Every man in the trade should read it.

"I watch the buying end of my business and always try to place my orders in the best markets.

"Preventing waste of material is another important point in connection with running a profitable tinshop.

"Without proper supervision and instructions a large amount of material can be allowed to go to waste, and this means a serious drain on the profits.

"Waste of men's time is also a serious leak if allowed. I always try to have work ahead—that is, I endeavor to get customers to place orders and contracts well in advance in order to always have plenty of work on hand for my men. I have an arrangement with a local factory whereby I supply them with a number of articles that they use in connection with a certain line of goods they make. In spare time the men make up these special lines, and no time is lost.

"I have always made it a point to go after quality business. I charge a fair price and add a legitimate profit, and I have been fortunate enough during the past few years to always have plenty of work on hand."

This merchant has made a success of his tinshop. He has made a practice of landing profitable business for this department of his store.

A writer in an American contemporary, referring to the landing of profitable business, says:

"The dull season is the time to go after the best business. The best business is that which involves the largest contract from the man with the best credit rating. This man is always the one who is willing to save money and who is in a position to follow his inclinations. Therefore, if he can be shown that he can save money by permitting his work to be done during the dull season, the chances are very good for landing a contract from him.

"Because this man's business is the most desirable, it is necessary that great care shall be used in keeping him as a customer. The best way in which to keep a customer is to do first-class work for him, and the time when the best work is possible is not when work is booming, customers are clamoring for action, and workmen are sent here and there on hurry calls, but in the dull season, when men are not driven and their employers are not nervous.

"The man whose business is worth the most is always the man who is easiest to convince by a good argument and hardest to convince with a poor argument or with a poor proposition. The best way in which to hold a customer is by doing good work, but the only way in which to secure a chance to do good work for a new customer is to make a good impression at the start, and it is, therefore, extremely desirable that the first impression shall be a good one. A little attention to the manner in which a customer is approached, therefore, will frequently result in the securing of contracts over a competitor.

The custom of always giving the contract to the lowest bidder does not prevail with the hard-headed business man whose business is the most desirable. This man knows that the manner in which he is approached will generally indicate the business capacity and responsibility of the man seeking the contract, and he will, therefore, devote special attention to the arguments presented, and will base his selection partly upon the amount of the bid and very largely upon his first impression of the bidder.

The securing of first-class contracts for the dull season should be considered one of the most important portions of the year's work, and the man who keeps after this business intelligently and persistently will frequently find it possible to place himself in such a position that the so-called dull season will have resolved itself into a period which he can reckon as the year's most profitable time."

Personals.

Charles R. Hubbard, E. C. Atkins & Company, Hamilton, Ont., was calling on the trade in Montreal this week.

Pierre Rondeau, formerly with N. Lemieux & Fils, of Quebec, Que., has joined the travelling staff of Starke, Seybold, Ltd., Montreal.

The firm of N. Lemieux & Cie., of Quebec, Que., sold out last week. Samson & Filion, of Quebec, bought their stock at the rate of 60½ cents on the dollar, while H. & G. Young took over their book debts.

Hardware and Metal is in receipt of a communication from D. L. Goodloe, who is at present enjoying a vacation at Seabright, California, following the completion of his work of building the catalogue recently issued by Lewis Brothers, of Montreal.

Raymond A. Catlin, Corbin Cabinet Lock Company, of New Britain, Conn., was calling on the trade this week.

J. O. Notman, McKinnon Dash Company, St. Catharines, Ont., was a caller on the Montreal hardware trade this week.

Problems For Sheet Metal Workers

IN the accompanying article we will deal with a simple problem in triangulation, viz., the transition piece of the tubular ventilation shown on Plate 28, and shown again by Fig. 1, Plate 29, and in perspective at Fig. 1-A.

As will be seen, the transition piece goes from a square at the bottom to a round at the top.

Let us draw a plan as shown by Fig. 2, first drawing the square base A-B-C-D to the size desired, say 3 inches square, then in the centre we will draw the circle representing the top.

Then draw the elevation Fig. 3, giving a side-view.

Now to return to the plan, let us divide the circle off into any number of equal spaces, say 8, having the points so that an equal number of lines can be drawn from each corner of the square into these parts, and each line will be the same length as the same line in the other corners.

A good way to accomplish this is to draw the diagonal lines across the square from points A to C and from B to D, stopping them at the circle.

Then subdivide the space between these on the circle and draw lines from the corner into each point.

Now each one of these lines A-1, A-2, B-2, B-3, etc., represent the base lines of a triangle the same as A-B of Fig. 6.

Now, to get the altitude or height of the triangle, we must go to the plan. This height is shown by X-Y.

Now let us draw a horizontal line, as S-A, Fig. 4. Then from A, Fig. 4, let us set off on this line the spaces A-1 and A-2 of the plan.

At A erect the perpendiccular line A1X, making it equal to Y-X of the elevation.

Then draw a line from X to 1 and X to 2 gives the true length of the lines A-1 and A-2 of the plan, which are the lines we needed to find so as to give us the width of the pattern.

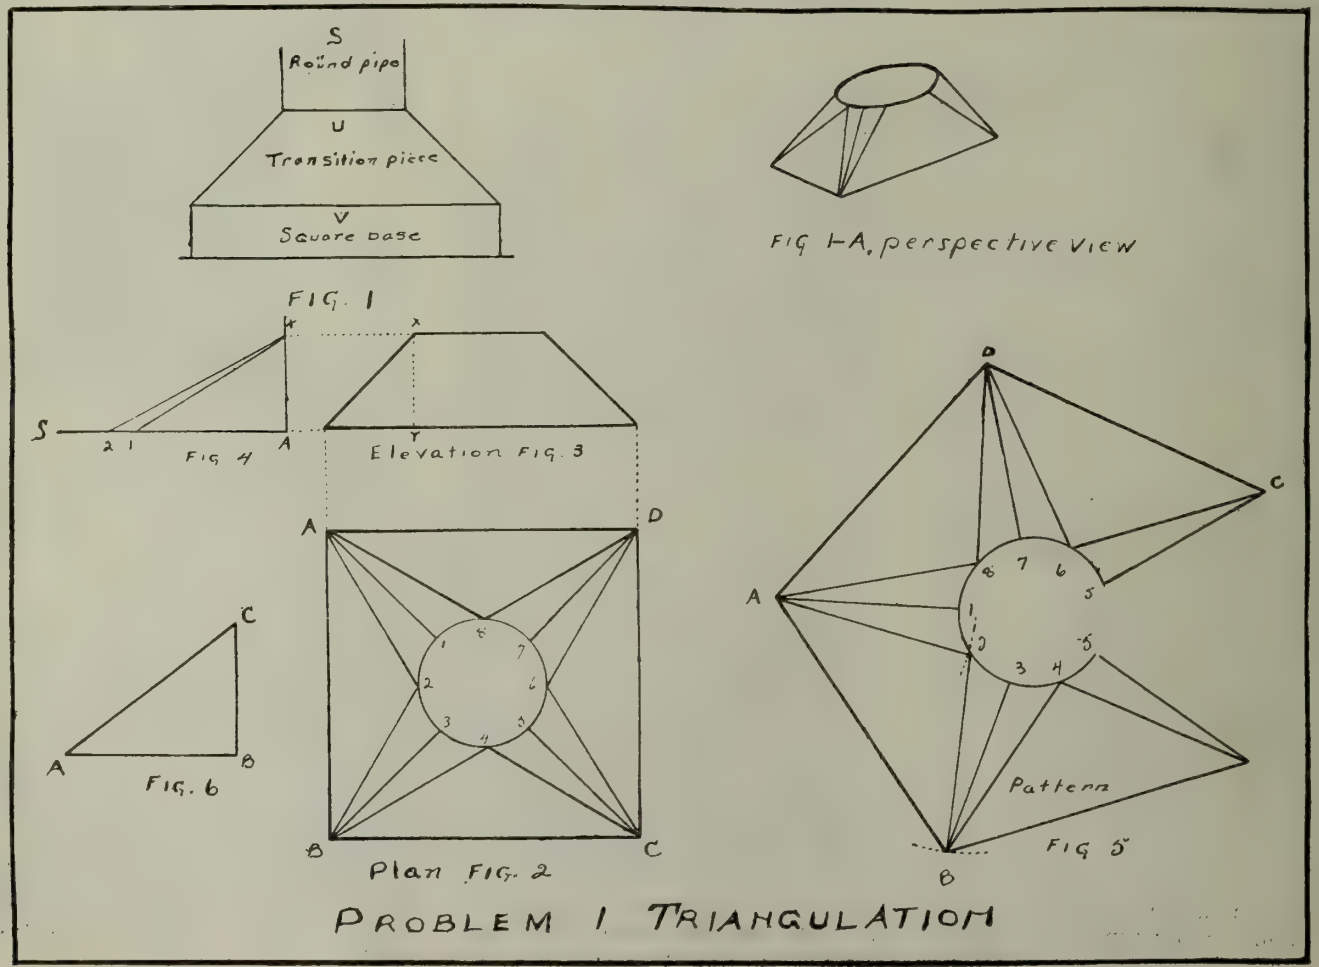
This we call our "diagram of triangles," and as B-3, C-5, D-7 on the plan are the same as A-1 and all other lines the same as A-2, it is only necessary that our diagrams show two triangles, viz., the true length of A-1 and A-2. We are now ready to develop the pattern. We will first draw at Fig. 5 a line equal to X-1 of Fig. 4, which represents with the compass set to X-2 of Fig. 4 we place the point at A, Fig. 5, and swing an arc as shown by the dotted line.

Then set the compass to the space 1-2 of the plan, and with the point at 1, Fig. 5, cut the arc, thereby locating the point 2 of Fig. 5.

Then with the compass set to X-2 again and with 2, Fig. 5, as centre, swing an arc as shown by the dotted line at B.

Then with the compass to A-B of the plan and with A, Fig. 5, of the plan as centre, cut the arc at B.

Then with the compasses set to 2-3 of the plan and 2, Fig. 5, as centre, swing an arc near point 3.



Then with the space X-1 and B as centre cut the arc, locating the point 3.

This gives one quarter of the pattern. Continue in this way until the whole pattern is developed.

Connect the different points.

Allow for flanges and fold.

In problem 2, plate 30, we illustrated a transition piece going from a round at the bottom to a square at the top (the opposite to problem 1). The square top is also set off to one side of the centre.

It could be set in the centre and the process would be the same, but by setting it off on one side it better prepares the student for meeting and overcoming this class of work.

A perpendicular view of the article is shown at Fig. 1-A.

Let us first draw the plan, Fig. 1, by drawing the circle or bottom the desired width of diameter, say about 4 inches, for practice.

Then we will draw the square wherever we want it located; but in order to follow the explanation of the problem it is better that we locate it as near as possible shown by the plan.

Now let us draw the elevation as follows:—

Directly over the plan and some distance above it draw the line U-V equal to the diameter of the plan.

Then we will draw the line K-Y the desired height, representing the top of the transition piece and directly over the square on the plan. Then we draw the lines U-X and Y-V, thus completing the elevation, Fig. 2.

Now let us divide the circumference of the plan, Fig. 1, into any number of equal spaces, say 8, as in this case.

Then number each of the corners of the square as 1, 2, 3, 4, as shown.

Now draw lines from each of the corners to the points on the circumference nearest to them. These are the base lines for our triangles.

Now extend the line U-V as shown by R-S and erect a perpendicular line from R, making the distance R-K equal to Y-H.

Now lay off on the line R-S from R each of the base lines shown on the plan; for instance, lay off the line A-1 from R and mark it A. Draw a line from A-1 to K, which gives the true length of the line A-1 I of the plan.

Now lay off A-2, B-2, C-2, C-3, etc., as shown, and draw lines to K.

It will be noticed that where two or more base lines are the same that we simply place the extra number or numbers under same.

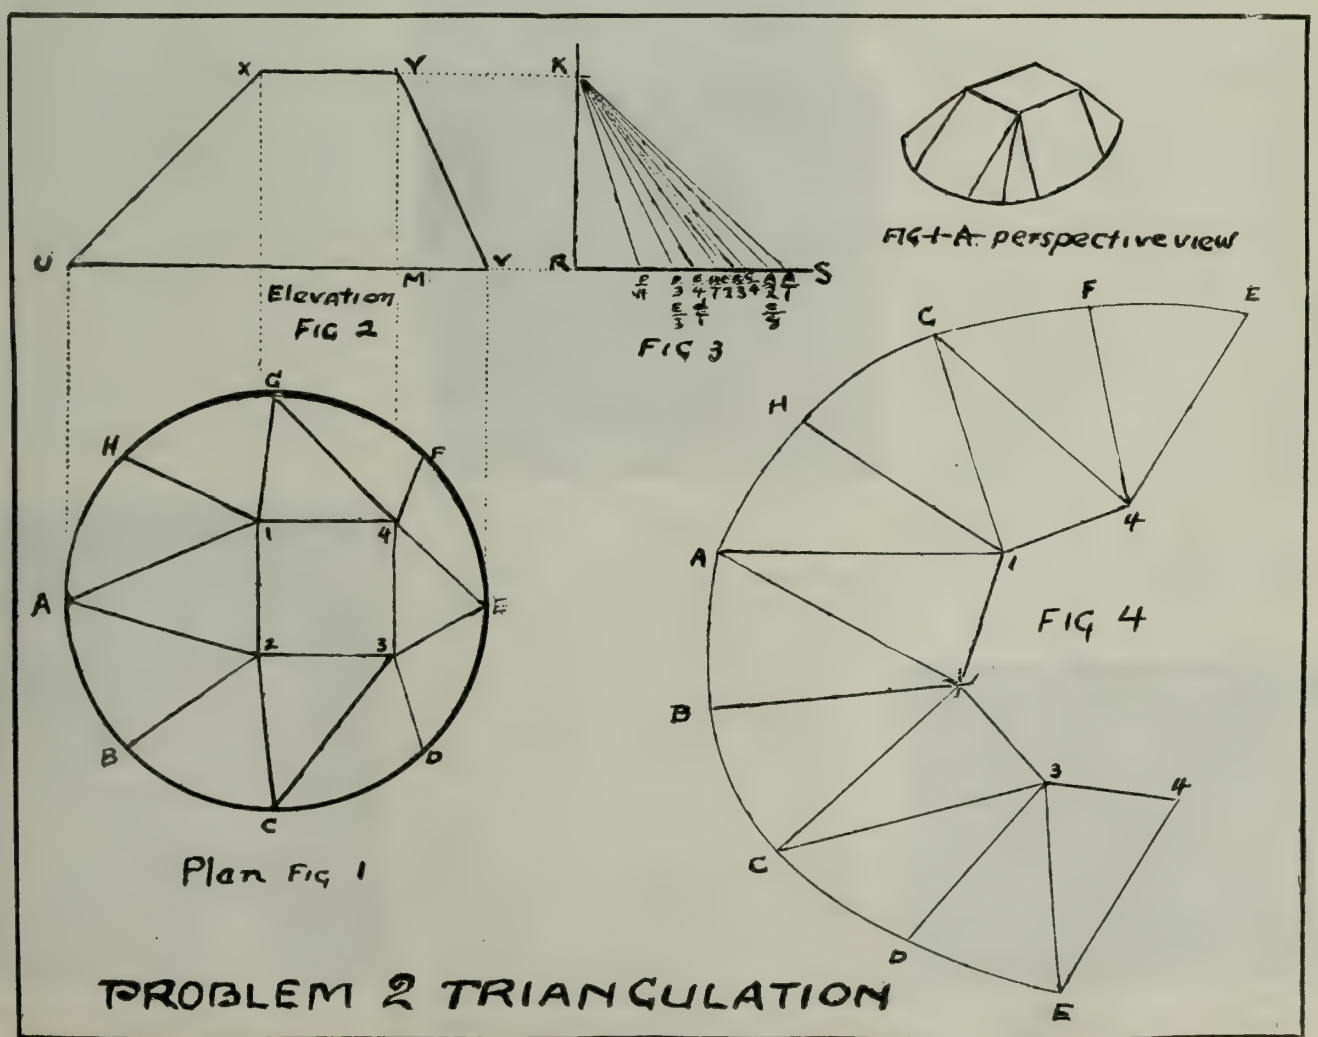
The Students' Diagram of Triangles, however, may be a little different to the one shown here; for instance, lines A-2 and C-3 may not be the same in that case; he would simply draw another line to the point where C-3 came.

Having now drawn our plan which gives us the distance around the bottom and top, and having our diagram of triangles giving us the true width of the side of the pattern at the different points, we proceed to develop the pattern as explained.

For Problem 1, viz.: we first draw a line A-1, Fig. 4, making it equal to A-K, Fig. 3.

Then set the compass to A-3-K, Fig. 3, and with A, Fig. 4, as centre, swing an arc about the distance from 1 as 1-2 appears to be on the plan.

Then with the compass set to 1-2 of the plan, and with 1, Fig. 4, as centre, cut the arc, thereby locating point 2.



Then with B-2-K as radius and 2, Fig. 4, as centre, swing an arc at about the place where B would come.

Then with A-B of the plan as radius and A, Fig. 4, as centre, cut the arc locating the point B. Also with the same radius and B as centre, swing around to about where C would come.

Then with C-2-K as radius and 2, Fig. 4, as centre, cut this arc locating C.

Then with C-3-K as radius and C as centre, swing an arc near where point 3 should be, and with 2-3 of the plan as radius and 2, Fig. 4, as centre, cut the arc locating 3.

Continue this until the pattern is finished.

Methods That Help to Increase Sales

Innovations Adopted by Various Stores Showing How Different Hardware Lines May be Displayed—The Great Tendency To-day is to Have Samples of All Lines on Display.

THE observer in visiting hardware stores in various parts of Canada is impressed by the great number of innovations introduced by retail hardware merchants, in an effort to show off their goods in such a manner that sales will result. The innovations are many and varied and a few of the methods illustrated and described in this article will doubtless prove interesting to retailers.

Fig. 1. Showing popular method of sampling shelf boxes.

In Figure 1. is shown a popular method of sampling tools on shelf boxes. By using these boxes or drawers a neat uniform effect is obtained and samples show up to good advantage. A few years ago—and in some stores to-day—it was not uncommon to see card-board boxes or packages on the shelves with the samples tied on the end by means of a piece of twine. This method of showing goods was very unsatisfactory, time was lost in opening packages and retieing them, the card-board boxes were continually becoming broken and the sample did not have a very uniform appearance. These objectionable features have been overcome by the use of shelf boxes or drawers. Samples are shown on the end of each box and prices may be marked on each article or on the side of each box.

Fig. 2. Showing how braces, hammers, bench axes, etc., may be displayed.

In Figure 2. is shown another popular feature in connection with displaying such lines as braces, hammers, bench axes, etc. This method of display takes the form of a wall case and is surrounded top and sides by shelf boxes. As shown in the illustration, the goods are supported by harness hooks about 9 or 10 inches in length. These hooks are inexpensive and the cost of equipping a section of the store shelving or wall space in this manner is very low compared with the results which should be obtained.

In Fig. 3. is shown a novel method of displaying cutlery samples. In the illustration such lines as kitchen knives, bread knives, table knives and forks, spoons, etc., are shown. These samples are all shown on sample boards which fit up flush against the wall shelving, the stock of each line being kept behind the display board. These boards may be taken down and shown to the customer. After a selection has been made the salesman secures a similar article from the stock on the shelf.

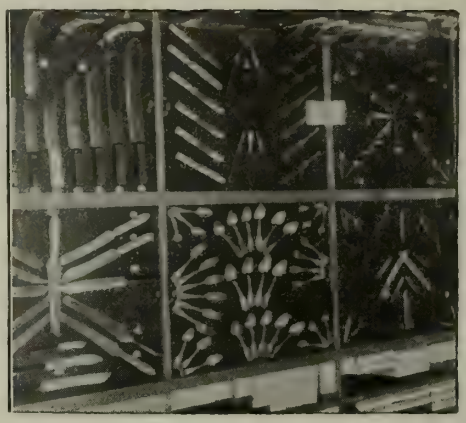


Fig. 3. Novel method of displaying cutlery samples.

In Figure 4. is shown a neat method of displaying bath room fixtures, and hand saws in wall cases. The goods are protected from dust, etc., by glass sliding doors which run on a small steel track. Each door is fitted with ball-bearing sheaves which make the door noiseless when running, and easy to operate. In wall cases of this kind, electric lights may be placed at the top of each section and turned on when showing goods. For displaying bath room fittings —which are generally nickel plated—a black cloth lining makes a good background. Dark green and white are also used at times, but the latter color does not always show off the goods to the best advantatge.

In Figure 5. is shown a swinging display rack that is used by a retail hardware merchant in East Toronto to display paint brushes, kalsomine brushes, house numbers, padlocks, builders' hardware, etc. One of the many advantages of a display stand of this nature is that customers will swing or turn the panels to see what is displayed on each one. A customer looking at an article on one side of the panel will naturally take a look at the other side as well, and possibly before he is finished he will have looked at all the samples on the rack. This method of display is rapidly becoming recognized by hardware merchants as an especially desirable method of displaying goods. For the merchant who

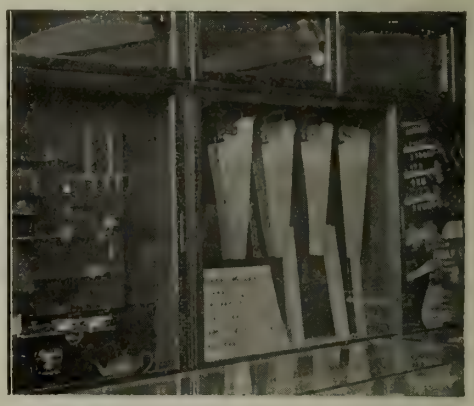

Fig. 4. Showing how bath-room fixtures and saws may be shown in wall cases.

Fig. 5 shows how a retail merchant displays paint brushes, etc.

is crowded for room racks of this description prove very valuable as sales-creators.

Figure 6 shows a section of the mezzanine floor in the store of Birnie Bros., Medicine Hat. This floor runs around the store on all four sides and is ap-

Fig. 6. Showing section of mezzanine floor in a Western store.

proached from downstairs by a handsome, oak-trimmed stairway. At the head of the stairway the offices are located and the balance of the mezzanine floor is used for displaying stoves. This is indeed a splendid arrangement. The stoves can be seen from any part of the store and yet salesmen and prospective stove purchasers when looking at stoves are away from other customers in the store and are not likely to be interrupted during their discussion on stoves.

Fig. 7 shows a section of a specially-constructed paint counter, showing how the front of the counter may be used for displaying cans of paint. The shelves in the front of the counter only extend in far enough to give room for the cans to set in flush. There are drawers in the back of the counter. As shown in the illustration, there is a brush show case on top of the counter. This case is about 6 or 8 inches high, and is fitted with a plate glass top so that brushes are in full view at all times. This style of counter does not take up any more space than an ordinary counter, and is very useful in the paint department.

In Figure 8, is shown a style of bar-

Fig. 7. Sectional view of specially-constructed counter for paint department.

gain table used in the store of John Moxon & Sons, Picton, Ont. These counters are used as novelty or bargain counters and are placed down the centre aisle of the store. Each counter is about 14 feet in length, 30 inches in width and stands about three feet in height. The tops are made of oak. Such lines as household goods, kitchen utensils, etc., are also shown. The goods are always neatly arranged and prices marked in plain figures. As shown in the illustration, small show cards are used to draw attention to the various lines.

In Figure 9. is shown a specially constructed stock and display stand suitable for enamel ware, aluminum ware, tinware, etc. It can be seen in the illustration that the two lower sections of the counter can be used for storing the surplus stock while the top of the stand can be used for display purposes. These stands will hold a large amount of stock and are used extensively in department stores. A number of hardware firms have adopted this style of stock and display stand.

Fig. 8. Style of novelty or bargain table used by a retail hardwareman.

Figure 10. shows a new auto truck recently purchased by W. Walker & Sons, Toronto, for delivery purposes. Mr. Walker states that one of the best ways to gain customers and to hold them is by giving efficient service, particularly in the delivery end of the business. If a merchant promises to deliver goods at a certain time, the goods should be delivered at the time specified. The Walker firm delivers goods over a large area in North Toronto and are highly in favor of auto deliveries as a means of giving prompt and efficient service.

WHO PAYS FOR ADVERTISING?

Suppose a manufacturer has among his products a corkscrew which has never been previously advertised, and which, including all production and selling costs, entails an expenditure of 10 cents for each one, based on a production of 50,000 a year. He sells it to the retailer at 15 cents and the retailer sells it to the public at 25 cents. This gives the manufacturer a profit of 5 cents on each corkscrew.

Now, suppose he decides to spend three-fifths of this profit on advertising

Fig. 9. Specially-constructed stock and display counter for enamelware, etc.

the corkscrew. Until that advertisement produced some kind of tangible result, the cost would come entirely out of the manufacturer's profits; but supposing the outlay had been judicious and that the original demand had been increased till the output was doubled. By doubling his output the manufacturer could produce the corkscrew at a reduced price—8 cents, plus 1½ cents for advertising, instead of 10 cents. That gives him a profit of 5½ cents on each of the 100,000 corkscrews, instead of 5 cents on each of the 50,000 which he originally manufactured. The outcome would be that the manufacturer was certainly not paying for the advertising, as he would be making a larger profit; and the same remark would apply to the retailer, who pays no more than before, and his cost of handling is reduced by the fact that he handles more corkscrews than before. It is equally certain that the consumer, who buys the corkscrew for 25 cents as he did before, does not pay for the advertising. Who, then, in such a case as this does pay?

Clearly it is the man who does not advertise—those manufacturers who would have sold the second 50,000 corkscrews had it not been for the one who advertised his product, and thereby induced the public to buy his goods in preference to theirs; out of their pockets

(Continued on page 184.)

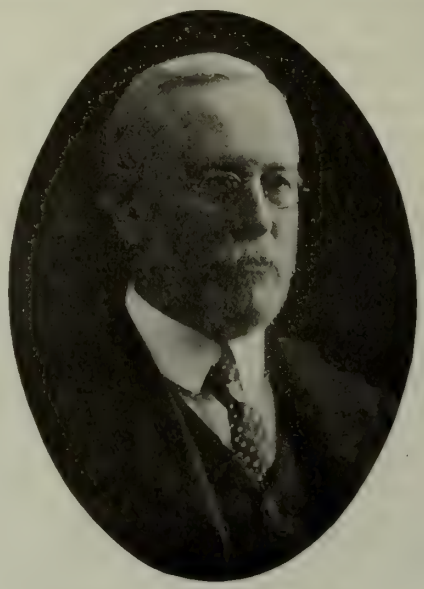
J. B. Learmont Passes Away



THE death occurred Thursday afternoon, Mar. 12, of Mr. J. B. Learmont, at the general Hospital, Montreal, following an operation performed on the preceding day. An announcement of the death of Mr. Learmont appeared in last week's issue of Hardware and Metal, but owing to the fact that the news was received just as the paper was going to press, it was impossible to give an account of the long and useful career of one who was well known, and whose name was familiar to the trade from coast to coast.

Joseph Bowles Learmont, as a member of the wholesale hardware firm of Caverhill, Learmont & Co., Montreal, a house dating back to 1854, was one of the best known and most highly respected business men in Canada.

He was born in Montreal on May 15, 1839, in which city he received his education, and at the age of 15 he took up a position as junior clerk with Crathern & Caverhill. His advancement was steady and in 1884 he succeeded to a partnership in the firm. As a business man Mr. Learmont achieved marked success, winning universal respect as a merchant, man of ability, judgment and integrity.

Mr. Learmont was noted for his literary tastes, and had frequently lectured on literary and historical subjects. He was an enthusiastic but discriminating collector, with a wide catholicity in the selection of his hobbies. He had an expert knowledge and extensive collections of old medals, coins and stamps, and he was also an ardent bibliophile, possessing many rare and almost priceless manuscripts and books, including a Bible of which only ten other copies exist. He also collected pictures, etchings, engravings, autograph letters, and personal objects formerly the property of celebrated men and women of past centuries. He was an early member of the Numismatic and Antiquarian Society, a member of the Natural History Society, and a councillor and treasurer of the Montreal branch of the Archaeological Institute of America. He was especially interested in relics and remains of the Indian tribes, and was the author of papers on "Folk-lore," and "The Canadian Indian."

Mr. Learmont's tastes caused him to take an unusual interest in the life and times of General Wolfe, and he had a magnificent collection of Wolfiana. This in turn aroused his patriotic instincts when a little over a year ago, it appeared likely that Quebec House, the birthplace of General Wolfe at Westerham, Kent, was about to be sold to a citizen of the United States. Mr. Learmont entered into negotiations which resulted in his purchasing of Quebec House, with the idea of making it a Mecca for Canadian pilgrims, and he placed the property at the disposal of the Canadian Government, which so far has taken no definite steps to accept his generous offer. A picture of General Wolfe's father, which formerly hung over the mantelpiece in Quebec House, was loaned by Mr. Learmont to the Montreal Art Association

The late J. B. Learmont.

for public exhibition, accompanied by a photograph showing the original position of the picture in the Wolfe home.

Two years ago Mr. Learmont was elected to the Council of the Montreal Art Association and he proved a most valuable member.

Mr. Learmont was a member of the committee on management of Montreal General Hospital, a member of the board and a governor of the Montreal branch of the Victorian Order of Nurses, and a director of the Charity Organization Society. In addition to this participation in concerted philanthropic work, his private charities were innumerable, but so unostentatious that their full extent was known only to himself. He will, therefore, be sincerely mourned not only by his friends and acquaintances, but by many persons in the humbler walks of life who owed much to his benefactions.

Although paying much attention to sociological problems, Mr. Learmont took no active part in municipal affairs or the wider field of politics. He was a member of the Congregational Church, and was on the executive committee of the Lord's Day Alliance. On his personal side he was a charming companion, courteous, cheerful, affable, and a most interesting conversationalist because of his well-founded knowledge on many diverse subjects.

Mr. Learmont was twice married, his first wife being Miss Amelia Jane Holton, daughter of the late Hon. Charles Holton, M.P., a well-known parliamentarian. She died in 1875. His second wife was Miss Charlotte Smithers, daughter of the late Charles F. Smithers, president of the Bank of Montreal, Mrs. Learmont survives her husband, and he also leaves one son, Mr. Holton Learmont.

The funeral took place from the family residence, 39 Macgregor Street, at 2,30 o'clock on Saturday afternoon to Mount Royal Cemetery.

Resolution of Wholesalers.

At a special meeting of the Canadian Wholesale Hardware Association (Montreal members), held March 13, it was unanimously resolved:

"We have learned with deep sorrow of the death of Mr. J. B. Learmont, who was one of the most respected citizens of Montreal, an esteemed fellow-member of the hardware trade, and also one of the deans.

"Resolved, that the Montreal members are voicing the wishes of the whole membership of our association in offering their sympathies and condolence to his wife and son, and to the firm of Messrs. Caverhill, Learmont & Co.

"Resolved, that a copy of this resolution be sent to his family and the firm."

WHO PAYS FOR ADVERTISING?

(Continued from page 183.)

comes the cost of their competitor's advertising.

A manufacturer or merchant, therefore, cannot afford to sit still and not advertise, when other manufacturers are advertising all around him. It is simply a matter of self-defence. If he fails to protect himself he may rest assured that with profits which should be his he is paying the publicity account of his competitor.

If your business expands faster than you do—something is sure to crack. Keep pace.

Great Expansion of MacLean Publishing Co.

A Brief Resume of the Growth of MacLean Publishing Co. During the Past Quarter of a Century—A Few Facts About the Greatest Organization of Its Kind in the World.

THE prosperity and growth of Canada have been evidenced in no more striking and convincing way than by the development of the MacLean Publishing Co. Starting in a small way with one publication, it has developed in twenty-five years into an organization of unequaled magnitude in the British Empire, with fourteen publications of national circulation.

As the present year gives every indication of being the starting point of an era of unprecedented expansion—and as this is a special expansion number—what more fitting than a brief story of the expansion of the MacLean Publishing Co., which, through its close connection with all branches of trade and industry, is perhaps the truest barometer of commercial conditions?

Merchants and business men generally will find it an interesting one, for the story of the growth of the MacLean organization is closely interwoven with the fascinating story of the growth of Canadian business interests.

Over a quarter of a century ago Colonel J. B. MacLean, having taken up journalism as a profession, and having completed five years' training on the leading Canadian and United States daily papers, saw that the tendency in newspapers as in the professions, as well as in manufacturing and business, was towards specializing, and he decided to specialize in journalism.

He planned to start a farmer's magazine, but as he had made himself an authority in Canada on financial and commercial topics, he was strongly advised to go into commercial journalism instead. Accordingly he began a weekly paper devoted exclusively to the news and progress of the grocery trade. This paper is to-day the well-known "Canadian Grocer."

Within a short space afterward he established other special publications—Hardware and Metal, Printer and Publisher, Dry Goods Review, Bookseller and Stationer, Plumber and Steamfitter, Canadian Machinery and Manufacturing News, Power House, Canadian Foundryman, Men's Wear Review, Canadian Millinery Review, Marine Engineer, Farmers' Magazine, The Financial Post of Canada, constituting the largest organization of its kind in the world owned by one man.

It will thus be seen that practically every branch of retail trade and many mechanical lines are represented in the papers published by this organization. The result is a connection that is unique. The MacLean Publishing Co. have sources of information on business matters that are exclusive in the sense of their scope. The influence wielded by the company through the many classes of readers reached is a wide and potent one. Further, the many interests merged in the organization make it possible to give the readers of each paper a better and more reliable service than would be possible if that paper stood alone.

Lt.-Col. J. B. MacLean, founder and active head of the MacLean Publishing Co.

The trade and technical papers are all leaders in their respective fields. Each has won recognition as the authority of the class to which it appeals. The word "MacLean" has become a guarantee of superiority.

Building up a Magazine.

But the activities of Col. MacLean did not stop with the publication of the papers already mentioned. He found a demand among his readers, who were made up almost entirely of financiers, manufacturers, merchants, and other business and professional men, for a publication dealing with subjects of special interest to them.

Deciding to meet the want, he looked about and found a little business magazine, which had already become well established, and bought it. It appeared a month later under a new name, The Busy Man's Magazine, enlarged to four times its former size. The growth of the magazine was very rapid, and after several years the need for a new name was felt. It was changed to MacLean's Magazine, and now occupies the unquestioned leadership of the Canadian field. Not only has the circulation increased to a figure hitherto undreamed of by Canadian publishers, but advertisers have recognized the value of the medium to them in a most marked way. For the past year MacLean's Magazine has been among the three leading magazines of the world in point of advertising carried. Recently it took the lead—and will maintain it.

The MacLean Publishing Co. have permanent offices in Montreal, Winnipeg, Vancouver, New York, Boston, Chicago, London, England, and other capitals of Europe. Agents are established in all cities and towns of Canada. Advertising, circulation and editorial representatives are found everywhere. In fact, the organization covers Canada with a thoroughness that could hardly be improved upon. There are few concerns in Canada with a pay-roll as extensive.

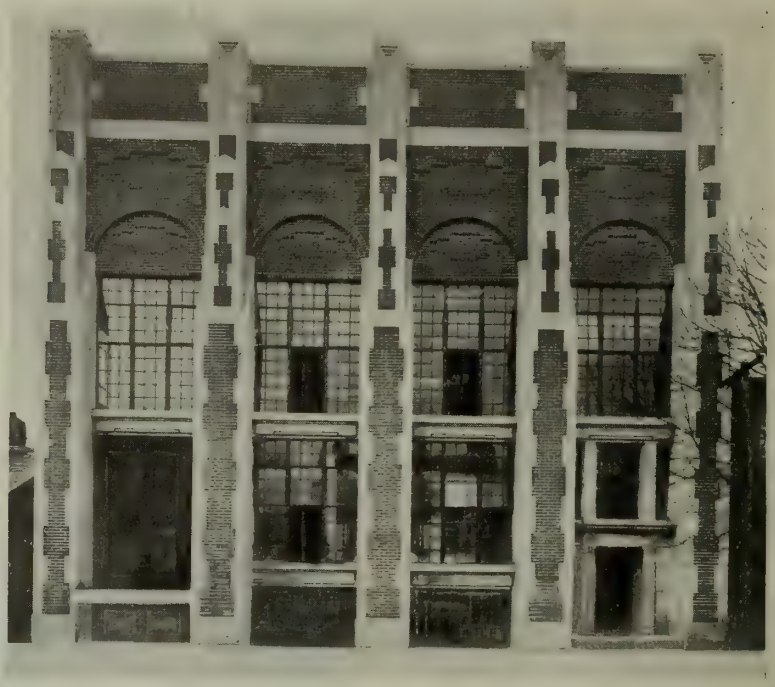
The New Building.

Four years ago the building occupied by the company on Front Street East was found too small and a new building was erected on University Avenue. This building was large and modern in every respect. It is probable that at the time the move was made it was thought that the increased space provided would be sufficient to accommodate the business for a number of years at least. Now, after the expiration of but three years, the building is hopelessly inadequate to provide the necessary accommodation for an organization progressing with giant strides. A new building adjoining the present one is in course of erection, and will be ready for occupation in May. It will be five-storeys in height, planned and laid out on the most approved plans of up-to-the-minute architecture, and will more than double the floor space. It is intended to give over the present building entirely to the mechanical department, and to use the new one for editorial and business offices.

The expansion of the company has been so remarkable in the past and the present is showing such unmistakable evidences of continued growth, that the future is looked forward to with a height of optimism which borders on certainty.

That the continued growth of the

country will mean a corresponding advance in the MacLean papers, which are all, without exception, national in their scope, is evident. As wonderful things are anticipated of Canada during the next ten years, equally remarkable growth can be written ahead for the MacLean Publishing Co.



As to Hardware and Metal.

It would not be fitting to conclude without some special mention of the growth of Hardware and Metal. The first issue of the paper was put out in February, 1889—a bright little number of sixteen pages. The second issue appeared the following month, and with this number was started the regular weekly publication of Hardware and Metal. It has gone out to the hardware trade every week since, carrying its message of helpful information.

The growth of the paper can perhaps best be likened to a snowball rolling down hill. It has been gaining size and momentum with each passing year. The rate of growth has been very markedly accelerated of recent years, culminating in the present number—the largest issue ever put out in Canada of a trade publication by a very large margin.

By its remarkable growth, by the thoroughness of the circulation it has obtained, by the stand it has won with its readers, by the unexcelled editorial service it renders, Hardware and Metal undoubtedly deserves the title so often applied to it: "The greatest of trade papers." This claim can be made without possibility of contention and without incurring the charge of egotism on the part of the publishers.

To trace the history of Hardware and Metal through its various vicissitudes and to mention the shifting personnel of the staff through a quarter of a century would be too heavy a task, and would entail the use of more space than is available. At the present time the paper is handled by the most complete and well-balanced staff that it has known. The progress it has been making is due in a very large degree to the fact that there is not a weak link in the personnel chain, that each position is filled by a man who knows his work thoroughly and is bending his best energies to the task of the further building up of a colossal trade paper.

A view of the present building occupied by MacLean Publishing Co. The new building is being constructed on the north-west corner.

THE ROLL OF HONOR.

QUITE a number of firms which advertised in the first issue of Hardware and Metal are still making use of its columns to bring their announcements before the trade. That so many firms should have found the service of Hardware and Metal profitable for the space of a quarter of a century is the strongest testimony to the useful place that this paper has filled.

A list of the advertisers who have been with the paper since the first issue is appended:

H. S. Howland, Sons & Co., Toronto.
Metallic Roofing Co., Toronto.
Alonzo W. Spooner, Port Hope.
Walter H. Cottingham (now Sherwin-Williams Co. of Canada).
Joseph Rodgers & Sons.
M. & L. Samuel Benjamin & Co., Toronto.
McKinnon & Mitchell, St. Catharines (McKinnon Dash Co.).
Wm. Johnson Co., Montreal (taken over by Canada Paint Co.).
Toronto Plate Glass Importing Co., Toronto.
J. W. Patterson & Bros., Montreal.
Standard Mfg. Co., Hamilton (now Cummer-Dowswell Co.).
The McClary Mfg. Co., London.
Clare Bros. & Co., Preston.
McKinnon Dash & Hardware Co. (now McKinnon-Dash Co.).
Hamilton & Toronto Sewer Pipe Co.
Thos. Davidson Co., Montreal.
Nicholson File Co., Port Hope.

THE INEFFICIENT MAN.

It is something of a paradox, but the inefficient man is usually pretty well satisfied with himself—and that is one reason why he is inefficient. He is convinced that he knows it all, and there is no use to try to improve himself. There is a characteristic that is not altogether foreign to window trimmers. But when we find a trimmer who knows it all he is usually occupying some obscure position. The biggest men in the business are those who are always willing to learn and make no pretences to universal wisdom.

Current News of the Hardware Trade

Death of Col. Pilkington.

London, Eng.—Col. Windle Pilkington, head of Pilkington Bros., the St. Helen's glass firm, with branches in many parts of Canada, died at Cannes, aged 74.

Branch of R.M.A. Formed.

Hamilton, Ont.—A local branch of the Retail Merchants' Association has been formed here. A. J. Plunkett, hardware merchant, was elected treasurer of the local branch.

Moved to New Location.

Whitby, Ont.—W. M. Pringle, hardware merchant, has moved into a handsome new store.

Hamilton, Ont.—Taylor Bros., dealers in cutlery, etc., will move one door south of their present location.

Death of J. G. McCallum.

Vancouver, B.C.—The death occurred here recently of J. G. McCallum, of McCallum & Sons, hardware merchants. The late Mr. McCallum was a native of Scotland, but had been a resident of the Dominion since 1888. For a number of years he was in business in Winnipeg and Cranbrook before coming to Vancouver three years ago.

New Firms.

Regina, Sask.—Stewart & Edwards, tinsmiths, have started business.

Bowmanville, Ont.—H. W. Martin will open a new hardware store here.

Regina, Sask.—The Western Canada Hardware Co., Ltd., have incorporated.

Regina, Sask.—The Capital Plumbing and Heating Co. have started business.

Appointed Canadian Agent.

Messrs. Charles Smith & Sons, Khama Gunworks, Birmingham, who have been making sporting guns of various kinds for over half a century, have now appointed G. P. Gilman, of 310 Coronation Building, St. Catherine Street, West, Montreal, as their agent in Canada, and he will carry samples of three lines of their guns. Mr. Gilman also represents Henry Wilson, brassfounders' merchants, also of Birmingham.

Located in New Quarters.

Weyburn, Sask.—The Hoshall-Carmichael Co., Ltd., are now located in their new quarters across the road from where they were formerly located.

Trenton, Ont.—The McClung Hardware Co. recently held their formal opening in their new store. An orchestra was in attendance and the second floor of the store was devoted to the ladies of a Church Guild, who served light refreshments.

Retailers to Organize.

Preston, Ont.—Preston merchants, having been visited officially by President Ziemann, of the Retail Merchants' Association of Canada, are planning to start a Preston branch of the Association.

Joins Cochrane Hardware.

A. D. Sinclair, who has been buyer for the Orillia Hardware Co., Orillia, Ont., for the past four years, has moved to Sudbury, Ont., where he will be associated with the Cochrane Hardware, Ltd. Before leaving Orillia he was presented with an address and a purse of gold by the bible class, officers and teachers of the church with which he was associated.

Business Changes.

Macklin, Sask.—Alex. Featherstonhaugh has sold his hardware business.

Elmira, Ont.—Simon Moyes has purchased the tinsmithing and furnace business of Klink & Ahrens.

Viceroy, Sask.—It is reported that R. W. Gyles & Co., hardware dealers, have sold out this branch to E. B. McRory.

Death of James Moore.

While dining with his son, F. B. Moore, Toronto, on Saturday, James Moore, sixty-eight years of age, collapsed and died a few minutes later. The deceased came from Norwich, England, to Chatham, Ontario, when about ten or twelve years of age. During the Fenian Raid he was stationed near Chatham as Inspector of Volunteers. For the past twenty-six years he had been Superintendent of the Toronto Furnace Company, Toronto.

Club Elects Officers.

The members of the Taylor-Forbes Football Club recently held their annual meeting and elected the following officers: Hon. Presidents—J. M. Taylor, Sr., Geo. D. Forbes, Adam Taylor.

Hon. Vice-Presidents—J. M. Taylor, Jr., A. R. Hockin, Jos Lawson.

President—F. Lewis.

First Vice-President—Jos. A. Hewitt.

Second Vice-President—M. Callander.

Sec.-Treas.—W. F. Drone.

Executive Com.—D. Bentley, W. Buntin, I. Rowe, J. Grindlay, E. Hewitt, Mr. Hamilton J. Clough.

Manager—D. Wilson.

Death of George Henderson.

The death occurred suddenly at Collingwood, Ont., of George Henderson, who had been engaged in the hardware business here for the past forty-five years. For thirty years he was associated with his two brothers, John and Jonathan, but during the past ten years had carried on the business on his own account.

Mr. Henderson took a prominent part in public affairs and had occupied many municipal offices. The deceased attended church on Sunday evening, and after returning home took ill and died about 11.30 p.m.

Fire Losses.

Shellmouth, Man.—Henry Adams, hardware merchant, has suffered a fire loss.

Fort William, Ont.—The hardware store of Colville and McLaughlin was recently destroyed by fire.

Linwood, Ont.—J. G. Seip, whose hardware store was recently destroyed by fire, is preparing to erect a new and better structure.

Toronto, Ont.—F. J. Blackmore, whose store at North Earlscourt was recently destroyed by fire is doing business in temporary quarters. The foundation is already in for a new building to replace the one destroyed by fire.

Ontario Incorporations.

Humphrey Bicycle & Motor Co., Ltd., capitalized at $100,000; head office, Toronto. Incorporators: W. J. Wright, G. H. Sheppard, G. H. Sheppard.

Canada Casket Co., Ltd., capitalized at $300,000, head office, Toronto. Incorporators: W. H. Irving, H. H. Davis, H. V. Hearst, J. R. Rumball, J. S. Beatty.

Canadian Metal Products, Ltd., Guelph, Ont., capitalized at $100,000. Incorporators: C. L. Dunbar, M. J. MacDonald, Edward Tatham, John Sutherland, Jas. Sutherland.

The Morgan Hardware Co., Ltd., Peterborough, Ont., capitalized at $40,000. Incorporators: Harry Powell Morgan, Robert B. McGill, B. D. Hall, S. Morgan, Harold McGill.

Whyte Foundry Co., Ltd., Toronto, capitalized at $40,000 to carry on the trades of iron masters, steel makers, etc. Incorporators, J. A. Kent, C. W. Thompson, J. M. Langstaff, J. H. McDonald, E. M. Gardner, C. W. Gibson, T. J. Wright and J. A. Sheppard.

Western Canada Notes.

The Kennedy Hardware Co. is opening a new store at Medicine Hat, Alta.

W. Bean, traveler on the main line west for the Hanbury Hardware Co., Brandon, Man., who has been ill for the past four weeks, has fully recovered and will start out on the road immediately.

J. M. Dunbar, North Portland, Sask., is opening a store for the supply of hardware and groceries. The following hardwaremen were visitors in Brandon, Man., during the fair:—Mr. Robinson, of Robinson & McConnell, Walpole, Sask.; P. M. Naylon, of Butler, Man.; William Cheeseman, of Vandura, Sask.; P. C. Mitchell and J. D. McGregor, of Mitchell & McGregor, hardware merchants, Brandon, Man., have just returned from a month's holiday to Indiana.

Obituary.

The death occurred at Toronto on March 11, of William Wright, who for twenty years was associated with the Bennet & Wright Co., Toronto.

The death occured suddenly at Hespeler, Ont., of H. Russell Brown, Treasurer Standard Chemical Co., Toronto. Mr. Brown was 38 years of age.

Sault Ste. Marie, Ont.—The death occurred recently of Amos B. Clarke, who conducted a tinsmithing and roofing business here. Interment took place in Toronto.

The death occurred at Vancouver, B. C., of Herbert Rolston, manager of the Ladysmith Hardware Co., Ladysmith, B.C. Mr. Rollston was visiting in Vancouver, when he became ill, death resulting within twenty-four hours. The deceased had been in business in Ladysmith for twelve years and was 58 years of age.

Personal.

J. A. Hossack, sales manager of Lufkin Rule Co. of Canada, has started on his Western trip and will go through to the Coast.

H. Clucas, manager Toronto sales office of the Canada Paint Co., attended the funeral of the late Geo. Henderson, hardware merchant at Collingwood, Ont.

Friends of Geo. H. Scott, president of the Northern Hardware Co. and a former resident of Lloydminster, Sask., are congratulating him on his marriage which took place recently at North Sydney, N.S.

C. Bishopric, who for some years has represented Whitman & Barnes, St. Catharines, in Ontario, is severing his connection with the firm at the end of the month. He will be succeeded by Mr. Thomson, who has in the past been connected with the office staff of the firm. Mr. Bishopric will move to South Carolina.

HARDWARE LETTER BOX

Berry Boxes and Baskets.

J. E. Austin Hardware Co., Simcoe, Ont.—"Please advise us through the Letter Box what firms manufacture berry boxes and baskets."

Erie Basket Co., Leamington, Ont.; Oakville Basket Co., Oakville, Ont.; Canada Wood Specialty Co., Orillia, Ont.; Thomas Bros., St. Thomas, Ont.; Keenan Woodenware Co., Owen Sound, Ont.—Editor.

Cotton Mops; Egg Case Fillers.

Sumner Co., Moncton, N.B.—"Kindly give us address of manufacturer of cotton mops, also egg case fillers."

Tarbox Bros., 275 Dundas St., Toronto, manufacture these mops. Miller Bros., 38 Dowd Street, Montreal. Trent Manufacturing Co., Trenton, Ont., make the egg case fillers.—Editor.

Wood Taps and Dies.

J. M. Adams, St. Mary's, Ont.—"Will you kindly let me know what firm makes wood taps and dies?"

Dorken Bros., 140 McGill St., Montreal, handle this line.—Editor.

Steel Window Sash.

Soren Bros., Toronto.—"Can you give us names of firms manufacturing steel window sash."

Steel & Radiation Ltd., Fraser Ave., Toronto; A. B. Ormsby Co., Ltd., King & Dufferin Sts., Toronto.—Editor.

Porcelain Ware.

Bell Thread Co., Toronto. — "What firm is located in Amherst, N.S., manufacturing porcelain ware?"

Amherst Foundry Co.—Editor.

Brazing Spelter.

Sumner Co., Moncton, N.B.—"Kindly give us names of firms making brazing spelter in Canada."

We understand this article is not made in Canada. Any of the following firms will be able to supply you:—Jas. Morrison Brass Co., Toronto; Canada Metal Co., Toronto; Tallman Brass & Metal Co., Hamilton. The Hungerford Brass & Copper Co., New York City, are manufacturers.—Editor.

Gun Racks, Armory Supplies, Etc.

S. E. Eakins, Millbrook, Ont.—"Kindly let me know what firms make armory supplies such as gun racks, bayonet racks, lockers, etc."

Dennis Wire & Iron Co., London, Ont.; Canada Wire & Iron Goods Co., Hamilton, Ont.; Steel and Radiation, Toronto.—Editor.

Tiling.

W. S. Fairweather, Sussex, N.S. — "Please advise me of any firms making floor tiling."

Barton Netting Co., Windsor, Ont.; Alabastine Co., Paris, Ont.; Italian Mosaic & Tile Co., Manning Chambers, Toronto.—Editor.

Awnings.

A. Koenig, Paris, Ont.—"Kindly give me name of manufacturer of awnings."

Raymond Bros., London, Ont.; American Tent & Awning Co., Toronto; J. J. Turner & Sons, Peterborough; Smart-Woods, Ltd., Ottawa.—Editor.

Non-Tinned Conductor Hooks.

W. H. Turnbull & Sons, Brantford, Ont.—"Kindly give me information as to where I can purchase non-tinned conductor hooks."

Wheeler & Bain, Toronto; Sheet Metal Products Co., Toronto; Metal Shingle & Siding Co., Preston, Ont.; Metallic Roofing Co., Toronto; Thos. Davidson Co., Montreal.—Editor.

Woven Rings.

Oneida Community, Ltd., Niagara Falls, Ont.—"Can you give us any information as to manufacturers of woven wire rings, similar to those used in mesh bags, only larger?"

Imperial Steel & Wire Co., Collingwood, Ont.; Wire Goods Co., of Worcester, Mass.—Editor.

Twenty Years Ago
In the Hardware Trade

The following items were taken from the issue of "Hardware and Metal" of March 24, 1894:—

"Edward Gurney and W. H. Carrick, of the Gurney Foundry Co., Toronto, have returned from a trip in the United States. They report business across the line exceedingly quiet."

Editor's note.—Edward Gurney is president of the Gurney Foundry Co. and W. H. Carrick is president of the Hamilton Stove and Heater Co., Hamilton.

• • •

"W. M. Gartshore, vice-president and manager of the McClary Manufacturing Co., was in Toronto last week."

Editor's note—Col. Gartshore is still associated with the McClary Manufacturing Co., London. The business of the firm has grown rapidly during the past twenty years, and many branch houses are now located in important Canadian centres.

(Continued on page 192).

Weekly Report on Market Conditions

Statements From Buying Centres on Prices and the Trend of Demand—Full Reports Dealing with Hardware, Metal and Stove Lines.

THE MARKETS AT A GLANCE.

With the spring season practically here, there appears to be a much better feeling evident in business circles. While trade in some lines is admittedly quiet, there are few complaints heard from firms engaged in merchandising hardware and kindred lines. Large numbers of spring orders are being shipped and many more orders are booked for April 1 delivery. In the metal markets trade is quiet and orders small, but a good feeling exists and a gradual, but steady improvement is looked for. Paint manufacturers appear well satisfied with the volume of business passing and orders, especially from the smaller towns, are numerous and large in size. A large amount of building is now under way and is causing activity in building materials. Stove manufacturers report an improvement over last week and there is an all-round improvement in collections. Very few price changes have occurred during the week. There are many good reasons for hardwaremen to feel optimistic and to expect a large volume of trade during the next few months.

MONTREAL.

MONTREAL, March 19.—The local market this week has shown a great improvement as regards demand, and every line is moving out in greater volume than in previous weeks. The retailers throughout the country are certainly showing their faith in the future as the orders for lines which are not used until the beginning of summer are quite heavy and perhaps show an increase over last year. If they do not the total business for spring supplies will compare very favorably with last year.

From all appearances the merchants in the smaller centres are not feeling the depression as much as the city man, or at least it looks that way. The country merchant is ordering in good-sized quantities at present and the booking of future deliveries is quite heavy. At the present time there is no doubt that the country merchant has great confidence in the future. As it is now, the bulk of the business is coming from the country, merchants there seeming anxious to stock up and be in a position to meet the rush when it starts in.

The weather is breaking up and the temperature has certainly gone up quite a few points during the last week, but still it is not a certainty whether the mild weather has set in yet or not as it is threatening every day to turn colder. This, however is thought to be unlikely, and it is the opinion of everyone that mild weather is here to stay. This fact has certainly stimulated business in the country as the merchants there seem to be quite anxious to get in their goods before the roads break up.

Collections are not yet what they should be, but there is still a little improvement being shown and if the same steady progress is made in that direction these should be quite normal in due time. Some of the local merchants have been obliged to accommodate customers this winter who have never asked for time before.

House Cleaning Goods.

There is a much better movement in these lines which consist of mops, mop handles, self-wringing and dustless mops, metal polishes and cleaners, sweeping powders and so forth. The trade in general are ordering these lines in good healthy quantities in order to get in line for the spring demand which is not far off now.

Granite and Tin Ware.

There is a much better inquiry all round for both granite and tin ware and the volume of business passing in these lines is quite satisfactory and seasonable.

Spring Line Bookings.

The bookings are quite heavy at present for all spring lines such as freezers, green wire cloth, poultry netting, staples and lawn tools. In fact, the latter are moving out already and in good-sized quantities, too.

Roofing.

The demand here keeps improving each week and at present there is a very firm feeling in the market. Merchants all through the country are sending in orders for their spring supply and these call for immediate delivery as a rule. This demand does not usually start in quite so early, and from present appearances it looks to be a big year in this line.

Brushes.

The demand is quite steady and on the increase each week. The retailers throughout the country seem to have realized the firmness of this line and also that an increase in prices is expected. As explained last week, the market for rice root is quite firm and conditions in Mexico do not indicate any immediate change in the situation. Until there is a better feeling there this market will continue its firmness as the bulk of the world's supply of rice root comes from that country. This has meant considerable expense to the manufacturer and dearer prices for that product, but as yet the Canadian market has not been advanced from last year, although the United States manufacturers have advanced their prices in some instances. Household and horse brushes are continuing extra firm and as the demand for these lines is heavy an increase would not be at all unexpected as local jobbers

The following 1914 quotations have just been issued on binder twine:—

650 ft.twine	13½c lb.
600 ft. twine	11c lb.
550 ft. twine	9¾c lb.
500 ft.twine	9¼c lb.

⅛c per lb. allowance on 5 tons and over.
¼c lb. allowance on 10 tons and over.
Delivery allowed on 300 lbs. and over.

In comparing these quotations with those of last year it will be seen that 650 ft. twine is 1 cent per lb. higher; 600 ft. twine remains the same; 500 and 550 ft. twine are ¼ cent per pound less. It is claimed that the advance of one cent per pound on 650 ft. twine has been caused by the exceedingly high price and scarcity of manila fibre of sufficent length and quality for making the 650 ft. twine.

anticipate this before long. The present prices quoted by one local firm for both scrub and horse brushes are as follows:

Scrub, per dozen ....$1.00 to $2.00
Horse per dozen .... 1.50 to 4.50

Refrigerators.

Quite unusual, the demand has already started for refrigerators and shipments have been made to country merchants during the past week.

Enamelware.

There is quite a noticeable improvement in the demand for all kinds and shipments are going forward mostly to the country, where merchants are already stocking.

Builders' Hardware.

Although there is practically no demand as yet from the city merchant there is a much better demand this week from the country and lines are moving out quite freely. This fact has lead local dealers to think that the country dealer has great confidence in the future and it is just this feeling that is needed.

Driving Tools and Chain.

Owing to the milder weather there has been a general increase in the demand for tools used in driving. Peevies, mill dogs, cocks, logging chains, boot calks, cant hooks and clevises. The driving season will soon open up if the present weather conditions keep up.

Maple Tools.

The local dealers are of the opinion that the trade in this line will certainly keep the average business up pretty well this spring. At the present time there is quite a volume of business passing in these lines and as the sugaring season is now on the demand has not as yet reached its limit.

Metal Market.

Perhaps we would be safe in saying that the tone of the market this week is not quite so firm as last and there have been several declines registered in that time.

Tin.

The price for small lots this week is given by the local trade as 44 to 44½ cents per pound with open prices for quantity lots. The demand is quite seasonable and a fair trade is passing. Both the London and New York markets are said to be dull.

Spelter.

Since one week ago there has been a reduction in the local quotations of 25 cents and the range is now from $6.00 to $6.25. The market is easy at these figures.

Both London and New York report a steady market.

Lead.

The local quotation is changed from one week ago, which was then given at $5.40. This week the range is from $5.25 to $5.50 and the market is a little easier at that figure.

The London market is a trifle easier than one week ago, while the New York report is to the effect that that market is steady with a firm undertone.

Copper.

Locally the quotation of last week has been shaded 25 cents and is given this week as $16.50.

Antimony.

Antimony has not changed from last week and the quotation of $9.00 given then remains unchanged with only a fair demand in evidence.

Iron.

There is no change from one week ago on the local market and the same price is quoted, $19.00 per 100 pounds. The demand is unchanged also.

Stove and Heating.

Although there is a light movement in both gas and cook stoves it is really too light for comment. This business will not start until around the first of next month, when there should be a heavy movement in the gas ranges at least.

TORONTO.

TORONTO, Mar. 19.—With the approach of spring the demand for building material is becoming more pronounced, and hardwaremen are receiving orders for tools and supplies of various kinds. In the metal markets business is quiet, although a good feeling exists. Very few price changes have occurred.

Wire Nails.

Although no changes have taken place in quotations on wire nails and the Toronto price is $2.15 base, developments are expected within the next few days. It is claimed that nail manufacturers are not making money at present prices and a meeting of manufacturers is now in progress.

Metals.

While the feeling in the metal markets is better, there is not much business passing at the present time. There is little change in conditions, except in copper, which shows a little more strength. The general opinion is that metals have reached bed rock.

Lead continues firm at unchanged prices. Tin is quoted from 41c. to 43c. per lb. Spelter is quoted from $5.35 to $5.65 per 100 lbs. Other quotations are shown in the accompanying panel.

Plumbing Supplies.

There is a good demand for plumbing goods, especially lead pipe, traps, etc. Quotations remain same as shown in Current Market Quotations.

Wood Screws.

The demand for wood screws is normal, although a few extra orders have been received as a result of the extra 10% discount off flat and round head bright screws. Quotations on screws are:

Flat Head, Bright....85-10-7½-10-10%
Round Head, Brigt....80-10-7½-10-10%
Flat Head, Brass....75-10-7½-10%
Round Head, Brass....70-10-7½-10%
Oval Head, Bright....80-10-7½-10-10%

Rope and Twine.

Trade in cordage lines is normal. A large number of orders for binder twine have been booked since quotations were issued last week. The new prices are shown in one of the accompanying panels. Rope quotations remain unchanged, although the primary markets have been reported easier. Toronto quotations on rope are:

Best Pure Manilla .....15c. lb. base.
British Manilla .....11c. lb. base.
African Hemp .....11c. lb. base.
Sisal Rope .....10½c. base.
Lath Yarn Single ..... 9¾c. lb.
Lath Yarn Double .....10¼c. lb.

Other lines are shown in Current Market Quotations.

The Stove Trade.

Business in the stove line has picked up considerably during the past week and a large number of orders have been received for gas ranges, coal oil stoves, gasoline stoves, gas plates, etc. Collections are also showing improvement.

Cement, Etc.

With winter breaking up and a large amount of construction work now under way, there is a more pronounced demand for cement. Cement manufacturers are hopeful of a good year's business as it is thought that a large amount of last year's deferred construction work will soon be under way. Quotations remain as follows: Portland cement, $1.55 per barrel, F.O.B. cars, and $1.63 per barrel in car lots delivered. Less than car lots the quotation is $1.85 per barrel delivered. Cement workers' tools will be in good demand as soon as the spring work is under way.

Electrical Goods.

The demand for electrical goods, such as irons, toasters, etc., appears to be on the increase and large numbers of electrical household appliances are being sold. Irons range from $2.75 ea. and upwards. Electric toasters are quoted from $3.40 and upwards. Retail hardware firms handling electrical goods are in many cases meeting with splendid success in selling these lines. There is a liberal margin of profit, on most lines, for the dealer and the stock is a nice clean one to handle, and one that can be dis-

played to advantage. The electrical appliance and fixture line is one of the best paying lines that has been taken up by the hardware trade during recent years. A good many retail hardware firms now have special display rooms for fixtures and appliances.

WINNIPEG.

ENCOURAGING to the hardware trade is the early opening of the building season of 1914. Unusually mild weather has started the preliminaries, and there is a noticeable improvement in industrial conditions in the city. Total building permits in Winnipeg for the year at the end of last week were $1,741,300.

Business in hardware generally shows a marked improvement. Country dealers have no doubt been hanging back. The light movement of February is not taken as meaning loss of business, but rather as business deferred. At any rate, spring sorting orders are now coming in in very considerable volume, while the great bulk of spring shipments or last fall's or early this year's orders are now out.

Expansion Work.

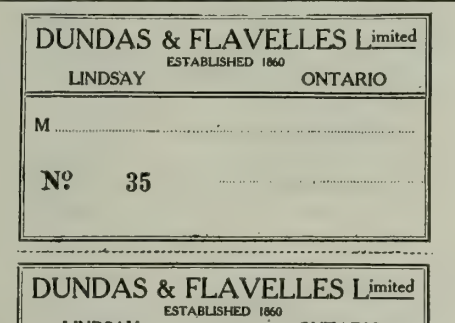
As regards prospects for new business, it is confidently expected that a large amount of expansion work that was postponed last year on account of the financial stringency will be carried out this year. There will be considerable construction work carried on by the railways. Take it all round, there is good prospect for all lines of labor being profitably employed.

There will be considerable further development of hydro-electric power in the Winnipeg district and in the northern sections of Saskatchewan and Alberta. This must not be lost sight of. It means a bigger and wider market all the time for electric fixtures and appliances. Important to the hardware trade also is the very large expenditure that will take place in the next few years on the Greater Wininpeg water supply system. The extension of a forced water system to all the suburbs means the equipment of some five thousand residences with water heating and modern plumbing, and this number of residences is increasing at the rate of some 2,000 a year.

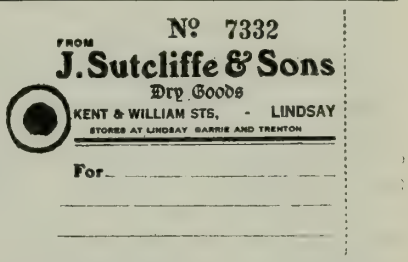
The annual demand for gas ranges for cooking is likely to come in earlier than usual. Oil and gasoline cooking apparatus are good lines at this time for country retailers to bring into prominence.

In paints, oils and glass, spring shipments are pretty well out, and it is a little soon for sorting orders to be coming in to any great extent. Kalsomines, floor paints, stains and varnishes are lines that should be in good demand at retail during the next few weeks, and are well worth bringing under special notice of customers.

Collections are slow and not up to expectations.



PARCELS FOR STATION.



Continued from page 142.

else's parcel. So, altogether, the present system is far superior, and the railways give us their assistance, as it really helps them in providing service to their passengers."

The firm of Dundas & Flavelles have a label printed, as shown herewith, gummed on the back. One section goes to the customer, and the other is attached to the parcel. Each bears the same number for recognition purposes.

The member of one firm informed The Review that at the end of one year one baggageman returned to them 500 of these "slips," and the official at the other station had 1,000, showing that the firm had sent out fully 1,500 parcels in this handy manner.

On left, label stuck to parcel; lower part being detached for customer. Above part of tag attached to parcel. Torn off part—for customer—reads: "No. 7332, parcel check. Your parcel will be surrendered only on presentation of this check. Sutcliffe's Departmental Store, Lindsay. You pay less here."

Getting Harder to Scare.

George Blakeley, of T. J. Trapp & Co., hardware merchants, was recently elected president of the New Westminster Retail Merchants' Association.

H. Occomore, Guelph, past president Ontario Retail Hardware and Stove Dealers' Association, was a visitor at the Toronto office of Hardware and Metal this week. Mr. Occomore believes that there wil be a steady improvement in business conditions from now on, and that retail hardwaremen generally will enjoy a prosperous year's business.

Weekly Market Report---Paints

MONTREAL.

MONTREAL, Mar. 18.—The local manufacturers are still quite busy working overtime making shipments of their spring orders which are going forward at present. The country merchants are getting in their supplies early before the roads break up and it is keeping the shipping departments of the different concerns working to capacity to get these out. The country merchant has the money at present and this fact alone has made their orders heavier in proportion than usual. All winter long the money has been going to the country for produce, etc., and it seems that the people there are beginning to circulate this as the orders from the country for all lines are much heavier than the city merchants.

Collections are reported by some as being a little backward, while others claim that there is no depression felt at all and that they are experiencing little or no difficulty in securing payment of their accounts. The city merchants are hanging back a little, but this is explained by the fact that the number of unemployed in the larger centres have been the cause of considerable curtailment in buying and that matters will not be remedied until there is more work.

White Lead.

The market this week is unchanged from one week ago and the demand which is in evidence at the present time is quite satisfactory. The same quotations are in effect and are given at $8.05 for ton lots while less than a ton quantities are quoted at $8.25. There is an open price for all orders for larger quantities.

Linseed Oil.

The market has been quite steady for the past few weeks and this week shows no change in the conditions. The firmness of the market is partially due to the increased demand which is attributed to the milder weather. The following quotations are still in effect:

1 to 4 barrels	60c. per gal.
5 to 9 barrels	59c. per gal.
10 to 25 barrels	58c. per gal.

Boiled Oil—

1 to 4 barrels	63c. per gal.
5 to 9 barrels	62c. per gal.
10 to 25 barrels	61c. per gal.

With open prices for carload lots.

Prepared Paints.

As stated above, the demand is extra good at present. There is a great volume of paint being shipped at the present time and there are also a number of orders for delivery about the first of next month. The different shipping departments are working overtime getting out the goods.

Glass and Putty.

At the present time there is little or no change from one week ago when we reported a quiet market with little business passing. There is little change looked for in the market and quotations are unchanged from one week ago.

Putty remains unchanged also, and the following quotations are still in effect:

Bulk, in casks ....$2.30 per 100 pounds
Bulk, in drums ... 2.50 per 100 pounds
Bladders, in barrels 2.80 per 100 pounds

With the usual advance of 70 cents per 100 pounds for pure putty.

Turpentine.

The market has firmed up some since last week and is quite firm at the present quotations. The conditions in the south have strengthened the local situation. The prices this week are as follows:

5 gallons	72½
Half barrels	70½
1 barrel	67½
2-4 barrels	66½
5-10	62½

TORONTO.

TORONTO, March 19.—The outlook in the paint business is very bright, and wholesalers and retailers alike expect that there will be a big improvement in business, with the advent of better weather conditions. There appears to be a better all-round feeling in business circles. A decided improvement is noted in collections. The only price change noted during the week was an advance in turpentine quotations. A large number of spring shipments of paint have been sent out and it is too early yet to look for many repeat orders. These will come as soon as better and milder weather sets in.

Linseed Oil.

No change has taken place in linseed oil quotations, the demand is improving and some dealers expect an early advance in price. Retailers in making purchases should be careful to specify the brand of some reliable maker. Quite frequently in the past inferior grades of oil have been offered for sale at low prices. Retailers should protect their own, as well as their customers' interests by purchasing oil and turpentine, which is fully guaranteed by a reputable firm. Present quotations are as follows:—

Raw—

Single barrels	65c.
3 to 5 "	63c.
6 to 9 "	61c.

Boiled—

Single "	68c.
3 to 5 "	66c
6 to 9 "	64c.

Oil in less than barrel lots 7 cents per gallon. Cans are charged for—5-gallon, 50 cents each, and 10-gallon, 75 cents.

White Lead.

Quotations on lead are firm and unchanged, and the demand will soon become more pronounced. It is felt in paint circles that lead will remain firm for some time. Toronto quotations are:

5-ton lots, $7.90 per 100 lbs.
1-ton lots, $8.20 per 100 lbs.
Less than ton lots, $8.40 per 100 lbs.

Turpentine.

We stated in last week's report that turpentine looked like a good buy at the prices then in effect. Since that time quotations have advanced two cents per gallon, and Toronto quotations are now as follows:

Single barrels .....69c. Imperial gal.
2 to 4-barrel lots .....68c. Imperial gal.
5-gallon lots .....76c. Imperial gal.

Glass, Putty, Etc.

Quotations on these lines remain the same as shown in current market quotations.

With expansion in the building trade will come a demand for glass. A large number of new buildings are now under course of construction.

Prepared Paints.

Spring shipments are still being sent out. Booking for spring has been heavy and retailers are looking forward to a large paint trade this spring.

TWENTY YEARS AGO.

(Continued from page 188).

" E. W. Cox, hardware merchant, Kingston, has sold out to W. Mitchell. Mr. Mitchell takes possession April 16."

Editor's note—W. Mitchell is still engaged in the retail hardware business in Kingston and has an up-to-date store.

• • •

A few of the market quotations shown in the Mar. 24 issue of twenty years ago are as follows:—

Pure Manilla rope	9¾c. lb. base
Tin	19c. lb.
Copper	11¾ to 12c. lb.
Solder	13½ to 15½c. lb.
Piglead	2¾ to 3c. lb.
White lead in oil	4.75 per 100 lbs.
Raw linseed oil..	58½c. gallon.
Turpentine	50c. gallon.

Editor's note—It is quite interesting to compare the quotations with those in effect to-day.

Current Hardware, Metal and Paint Quotations

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figure being for large quantities and prompt pay. Large buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

PAINT HISTORY
OF INTEREST TO CANADIANS

1729 Founding of the Firm of **Brandram Bros.,** Inventors of **Brandram's B. B.** Genuine White Lead—the best White Lead the world has ever known.

1749 First opportunity for **Brandram's** products to find their way to the Canadian market with the founding of Halifax.

1892 **Brandram Bros.** give Henderson & Potts, Limited, of Halifax, exclusive right to the handling of **Brandram's** White Lead in the Canadian market.

1906 Founding of the new firm of **Brandram-Henderson, Limited,** and the purchase by this Company from **Brandram Bros.,** of London, of the formulae and exclusive rights for Canada, etc., for making **Brandram's B. B.** Genuine White Lead.

1908 Completion of the great Lead Corroding Works in Montreal and the beginning of the **Brandram-Henderson** campaign to capture the Canadian trade in White Lead.

1909 Decision of **Brandram-Henderson, Limited,** that the formula for the base of B.H. "English" Paints, in white and tints, should be 70% Pure White Lead (Brandram's B.B. Genuine) and 30% Pure Oxide Zinc, thereby assuring to the Canadian people for all time an absolutely pure and reliable mixed paint.

THE CANADA PAINT CO.
LIMITED

TRADE MARK TRADE MARK

If you have not found your paint department profitable, you are the man who should at once look into The Canada Paint Co.'s proposition. We can show you that by taking on the particular proposition that fits your local conditions, we can co-operate and develop a profitable paint business for you in your town. We would appreciate the opportunity for our Representative to make a personal call and show you to your satisfaction what we have to offer.

CANADA PAINT (Liquid)

CP "CANADA PAINT" is a "Ready-to-use" Paint made of the purest materials, finely ground and mixed by special machinery. It is made of pure lead, pure zinc, pure linseed oil. These materials, with the coloring pigments and driers, are combined in correct scientific proportions, and ground together in powerful mills. The result is a paint that covers the greatest amount of surface, and wears for the longest possible time.

Put up in air-tight Imperial Measure cans, attractively labelled. Forty-five popular colors and White and Black.

To the dealer who is interested in an exclusive agency proposition, who wants the best that the market affords, and wants a well-advertised line, we can recommend "CANADA PAINT." It is the kind of a product that will build up a big paint business.

READY-MIXED PAINTS (Liquid)

The Canada Paint Co. has for a great many years made a specialty of manufacturing Prepared Paints and our various Brands are favorably known from one end of the country to the other. The growth of this Department of our business has been steady, and some of the Brands we manufacture have been selling in Canada longer than any other Ready-mixed Paints on the market. In our leading lines we have three Brands, which offer much excellent value to the dealer and to the property-owner. Any one of these Brands represents a most satisfactory Paint at a very moderate price.

"Elephant," "Prism," and "Stag" Brands. (Including Floor Paints.)

These colors can be stocked by the dealer according to either of the two color folders showing well-selected assortments. Put up in half-pints, pints, quarts, half-gallons, gallons, five gallons, and barrels.

CP SANITONE (Liquid) FLAT INTERIOR FINISH

Sanitone is a durable oil paint that drys with a flat, velvety surface. It is absolutely sanitary and can be cleaned with soap and water. Sanitone is easy to apply, covers well and drys flat without the necessity of stippling.

Sanitone is for inside use only and can be applied to plaster, cement, stucco, plaster, board, canvassed walls, metal walls, ceilings, etc.

To-day more attention is being given to the interior finishing of residences, offices, public buildings, hospitals, etc., than ever before. Sanitone exactly meets the demand for an ideal finish for walls and ceilings. It is made in all the artistic colors now demanded by the leading decorators. Put up in quarts, half-gallons, gallons and five gallons. Also Sanitone Mixing Size for New Walls.

Montreal Toronto Winnipeg Calgary Halifax

TRADE MARK

TRADE MARK

CP WAGON AND IMPLEMENT PAINT (Liquid)

This is a very popular product throughout the country. It is a durable gloss paint for the refinishing and painting of wagons, agricultural implements, garden tools and the many other things about the country home and farm. This paint dries hard over night with a full, rich gloss. Red, Blue, Black, Green, Yellow, Maroon. Put up in half-pints, pints, quarts, half-gallons and gallons.

CP SUN VARNISH STAINS (Liquid)

We have done a great deal of experimental work in the production of a combined Stain and Varnish. The result of our experiments has proved that a permanent pigment stain, combined with a good quality of varnish, gives the best wear and the best results in every way. Sun Varnish Stains give the color of the wood, and a varnish finish with the one application. They are made of carefully selected materials that do not fade. Put up in quarter-pints, half-pints, pints, quarts, half-gallons and gallons in following colors:—Golden Oak, Green Amboine, Rosewood, Walnut, Mahogany, Cherry, Antique Oak, Light Oak, Cocobola, Flemish Green, Flat Black, Ground Color, Clear.

CP SUN VARNISH

This Varnish represents unusual value, and is an ideal varnish for a paint dealer to feature and push. It is a bright, hard Copal varnish, which can be used for inside and outside work, and gives splendid satisfaction. For outside work it can be used on wagons, carriages, store fronts, doors, boats, and all exposed surfaces. For inside use it is a splendid finish for all woodwork, being particularly good for bath-rooms, kitchens, and other parts of the house exposed to unusually severe conditions. Put up in half-pints, pints, quarts, half-gallons and gallons.

CP SUN WATERPROOF FLOOR FINISH

This is made especially for floors, with the idea of standing the severe conditions to which they are subjected. Dries extremely hard over night, but does not scratch or mar easily. Water does not affect or turn it white. On hard wood, hard pine, or any stained or varnished floors, CP Sun Waterproof Floor Finish gives good results. This varnish is never sold in bulk. Put up in half-pints, pints, quarts, half-gallons, and gallons.

Montreal **Toronto** **Winnipeg** **Calgary** **Halifax**

I'm a member of "The Brighten Up Club."

Are you?

This Spring offers Sherwin-Williams Agents great opportunity for larger and more profitable paint sales. Join the Brighten Up Club.

The Brighten Up Campaign is launched from Atlantic to Pacific. S-W Agents are going after increased business, backed by the most complete and best Spring paint campaign yet devised. It is moved by the great Brighten Up Spirit, the spirit of Spring, that stirs property-owners as well as paint dealers. It is abreast of the New Prosperity Wave that is surging over this great land. Business activity is already speeding up. 1914 is to be one of the big years in Canada's development. The foremost financial and business men are optimistic. Canada's condition is sound and healthy. The leading publications are out to boost Canada—do your part, boost your town. There is no more practical way of boosting than the Brighten Up Club idea. It means wonderful improvement in the appearance and welfare of every town, whatever may be the present condition of its streets, stores, public buildings, homes and parks. Everyone who takes a pride in their town is eligible for membership in the Brighten Up Club. There are no fees or obligations—election is unanimous. The S-W Agent in each town supplies Brighten Up Creeds and Buttons free—no one needs to buy anything from him; but by doing his share, he knows he will get his share of the benefits. Not only will people need new rakes, lawnmowers, hammers, nails, saws, screens, brooms, glass, putty, paint brushes, etc., but many will buy good quantities of SWP Sherwin Williams Paint (Prepared), Preservative Shingle Stains, Family Paint, Buggy Paint, Inside and Porch Floor Paint, Floorlac, Varnish Stain, Enamel, Marnot varnish, Kopal varnish, Excello varnish, Taxite, Floorwipe, Flaxoap, Brasbrite, Polish-ol, and other Sherwin-Williams Finishes. Yes, they will buy S-W Finishes, because Sherwin-Williams Advertising this Spring is more extensive, more effective and more in evidence than ever before. In all the larger towns the splendid 24-sheet poster will

The Creed of the Brighten Up Club

¶ To Brighten Up myself—to be optimistic, cheerful and good-natured.

¶ To Brighten Up my home and spread the Brighten Up spirit among my neighbors.

¶ To Brighten Up my business and take pleasure as well as profit from it.

¶ To Brighten Up my town and promote its social, industrial and commercial progress.

¶ To promote the love of Nature, sunshine and fresh air.

¶ To adopt Brighten Up as my slogan.

display S-W Finishes during the month property-owners are buying paints and varnishes. Property-owners will receive the 1914 spring edition of The Home Decorator, printed in four colors and showing a most practical and attractive range of colors of the various S-W Finishes. Possible paint-buyers will get personal letters from the S-W Co.—good, forceful selling letters directing them to the S-W Agent in their town. Every possible buyer of paints and varnishes will be reached by the aggressive and effective S-W advertising, and S-W Agents will link their stores up with this great Spring campaign by their attractively-dressed windows showing the S-W Spring Window Trim. Many Agents are co-operating with the S-W Co. in a newspaper campaign—a series of mighty effective ads. that have been prepared specially for this campaign by the S-W Advertising Dept.

This Brighten Up Campaign is going to be a profitable one for all S-W Agents who enter into it and carry it through with enthusiasm and optimism.

What about you? It isn't too late yet to join the Brighten Up Club. If there is no S-W Agency in your town, write for it to-day. Don't wait till to-morrow, do it right now.

The House for Quality and Prompt Service

PAINTS, OILS VARNISHES GLASS ETC

We've always held that it's preferable to put quality ahead of all other considerations, and the steady growth of our business has proved that we are right.

The friends we made in our early business years — are our steady customers yet—the friends we make this year we expect to be serving acceptably, twenty years hence.

This quality idea pervades every line we sell; we try to give our customers the very best—and that, at the fairest price possible.

Our service to our customers has been just as important as the quality idea, in building our business to its present proportions.

We realize that prompt service to the dealer, may make all the difference, when he is negotiating a sale of material he has not in stock.

And our endeavor has always been to help him, all we know how, by shipping his orders to him, just as quickly as we can.

Next time you get the chance to make a big paint or varnish sale, don't turn it down, because you haven't got the stock. Wire or phone us and let us give deliveries.

Sanderson Pearcy & Co., Limited

61-63-65 Adelaide St. West, Toronto, Ont.

RAMSAY'S PAINTS

The "BEST" Stock Fountain — the "best" for the following reasons:

Showing Construction

Easily attached to a barrel or tank.
All working parts are accessible without removing fountain or water. Connections of working parts are made with brass and will never rust, so that they cannot be removed. There is practically no chance of sediment getting on valve seat and preventing valve from closing.
Valve cannot wear off on one side and cause a leak. Construction of **Float Rod** reduces the chances of pipe becoming clogged.
Perforated Brass Screen is easily removed in case valve requires adjustment.
If your Jobber does not handle the "Best," a post card to us will bring full particulars, prices and terms, which we **know** will be interesting and profitable to you.

A Hint to Every Paint Merchant

Get those BIG ORDERS

The orders that every consumer takes the time to get a price on.

And always leaves his money where he gets the best prices.

O. P. W. merchants always have a price that will persuade the thrifty buyer to give him the second call.

Our Paint Wears on every job and Trial customers are always sure to become your steady. And steady customers mean that you get the Big and Small orders.

Write us to-day—delay is loss to you. We will have one of our many experienced salesmen call on you and convince you that we have the proposition that you are looking for. And the proposition that will give you the profit you are entitled to.

Our 1914 Catalogue will be mailed on application.

The P&L Spring Advertising is Hitting Hard in Your Town

BANG! Bang! The cannon are roaring, the bombs are bursting — the big Pratt & Lambert Spring Advertising Campaign is in action. Your town is the scene of action. Already word comes from the firing line: "We have met the varnish buying public and they are ours." Individual consumers, home-builders, painters, architects and contractors — every class to which varnish is sold are yielding to the mighty persuasive force of "Pratt & Lambert Advertising," and are buying Pratt & Lambert Quality Varnishes. Study the bursting bombs and you'll know why.

Are *you* getting this business in *your* town?

Write for the Pratt & Lambert Dealers' Proposition.

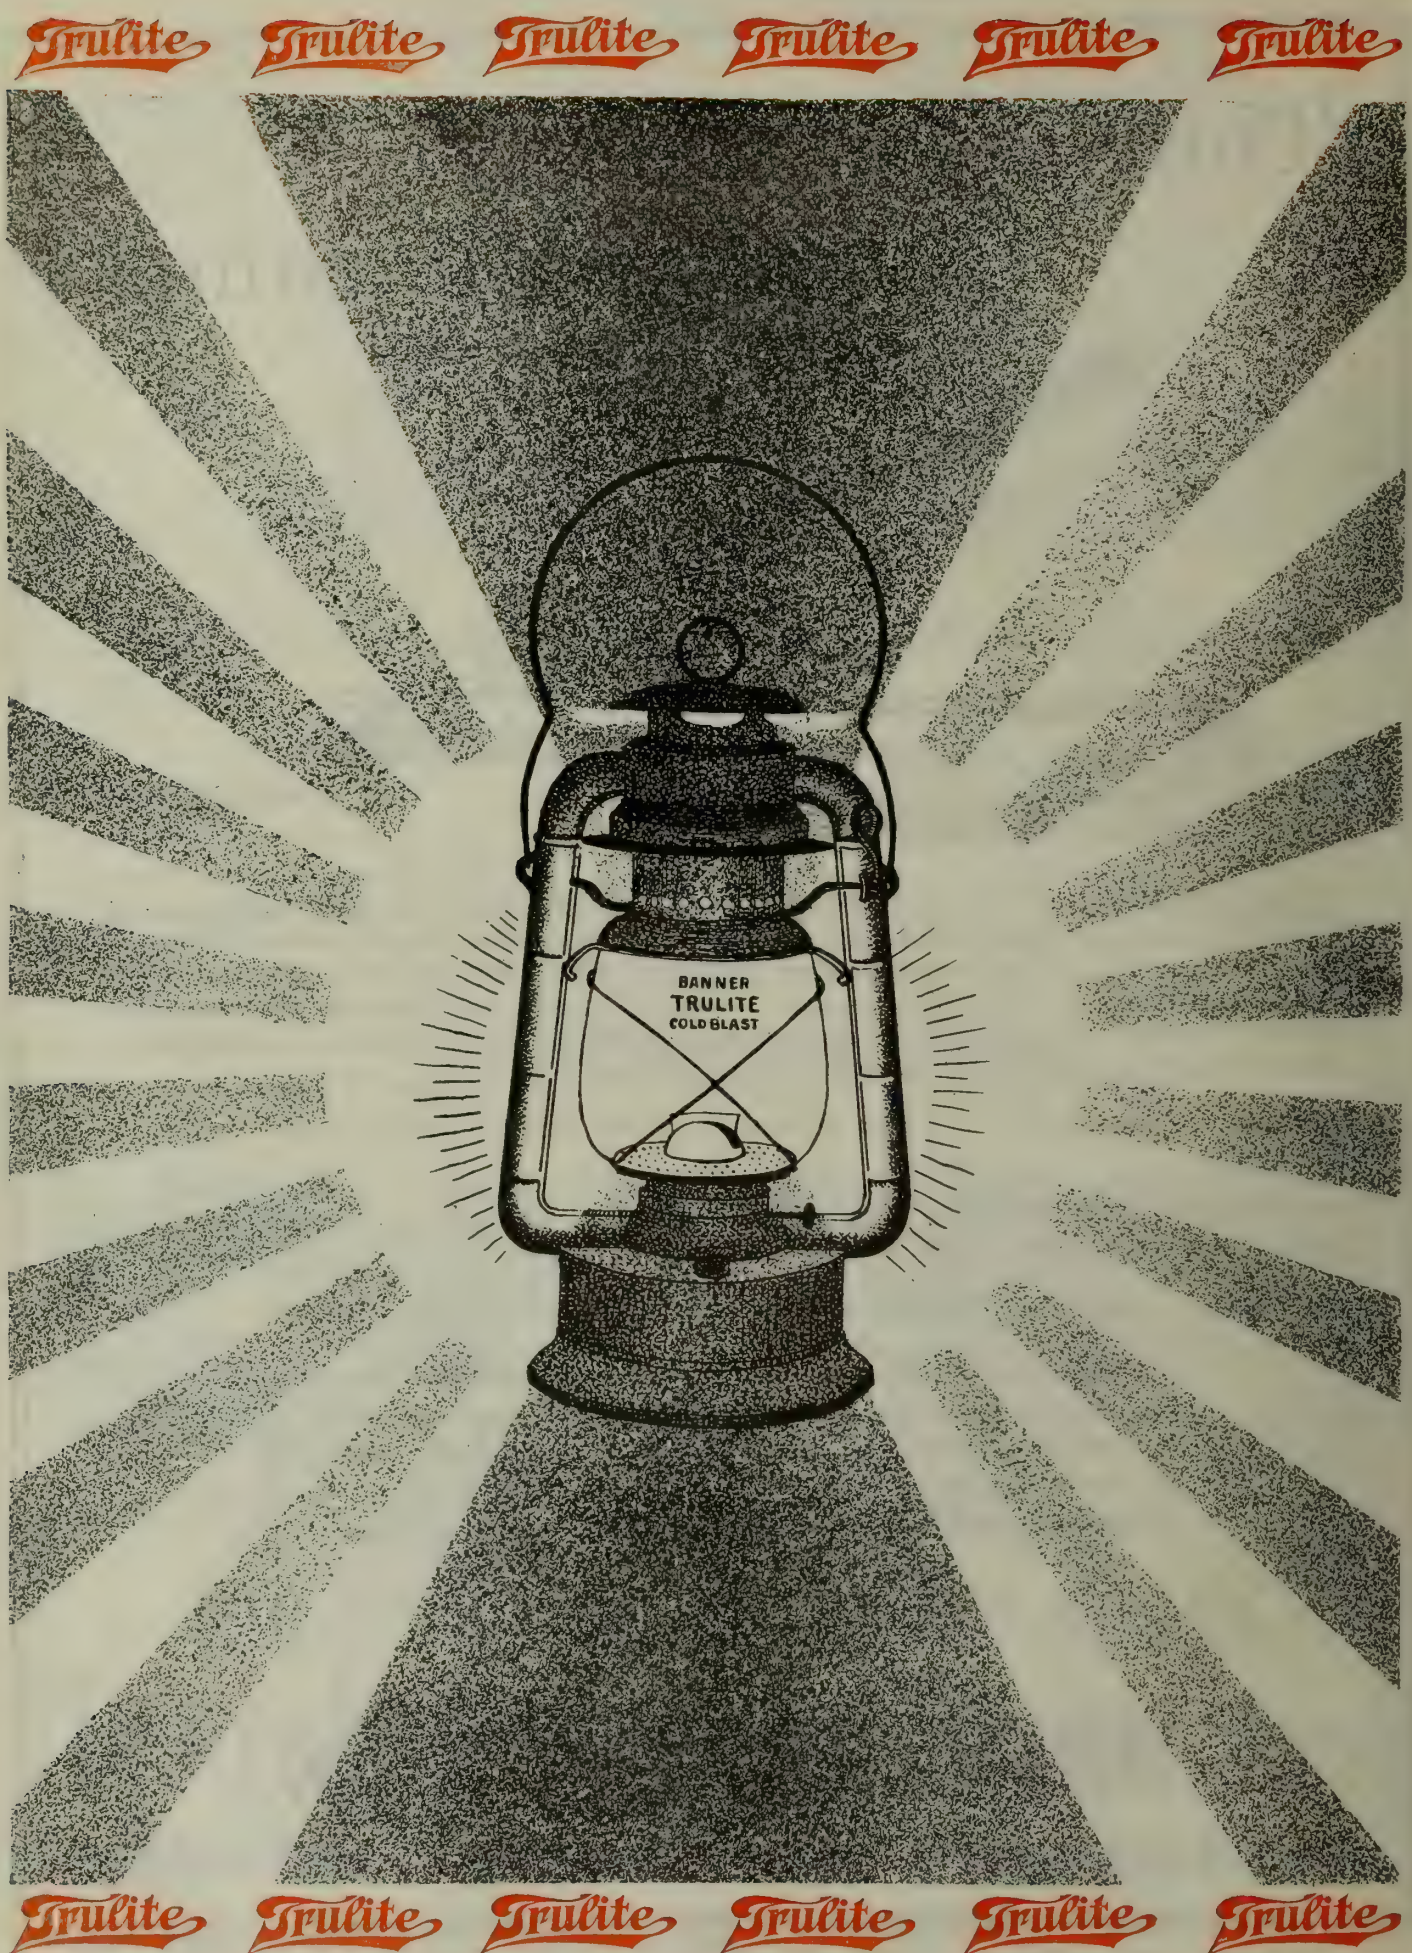
This Razor Has Two New Features

IT IS THE ONLY RAZOR made on the NEW FORGING PRINCIPLE invented last year by Mr. C. Fr. Ern—the world's largest razor maker. By this new process the blade, DURING ONE HEATING, receives about 25 light hammer blows, which is FOUR TIMES MORE HAMMER TREATMENT than is applied in the old drop-forging method. The result of this new forging process shows itself in the general even quality of the blade and in its wonderful power of holding the edge, the carbon of the steel not having been destroyed by repeated heating.

Hardened and tempered by the most up-to-date scientific processes, which insure even quality throughout.

THE ONLY RAZOR WITH A SELF-LOCKING METAL HANDLE protecting the blade and making injury to edge impossible.



Selling price to consumer, $2.00 each in silverplated, goldplated and gunmetal handle.

The ERN JUNIOR when used with the ERN Safety Guard makes the most perfect safety razor on the market. It can be used with or without the Safety Guard.

Builders' Hardware

Knowing Contractors will use "Russwin"

They have learned that in buying **Russwin** hardware they secure both durability and style in the highest possible degree. In the wide variety of designs are fittings that will please your most exacting customers. Those who have used Russwin hardware in the past will ask for it again. Those who have not will buy it at sight. By satisfying your customers you will retain their trade. Take no chances and offer them the best.

Quality Goods that Sell Readily

Spring season means the opening up of the building business, and you will be called upon for more builders' hardware in the next few months than at any other time in the year. Anticipate this demand and secure your profit on this line by stocking early. Full information covering Russwin goods will be forwarded you on request.

Canada Cement Sells the Rest of the Bill.

When a man comes into your store to buy cement for a concrete building, you know that he needs other supplies to complete it. He will naturally buy these at the same time that he buys the cement. The attached bill is a sample of what you can sell him.

To keep this trade, you should sell that kind of cement which will give him the greatest satisfaction.

CANADA Portland CEMENT

is made in twelve large mills, situated so as to supply all parts of Canada promptly and at minimum prices. By producing such large quantities every year, it is not only possible, but economical, to have a well-trained staff of skilled men to oversee every detail of manufacture from the time the raw material enters the mill until it is delivered to you.

The best way to put yourself in a position to get this additional trade is to write at once for terms to

MAXIM SILENCER

The Maxim Silencer has aroused more interest and received more publicity than any other invention in the firearms field for years. This insures numerous and steadily-growing sales to the dealer who sells it—and makes known to his customers the fact that he sells it.

We help you sell and demonstrate the Maxim Silencer in your store. We furnish you, without charge, with a striking store sign, folders, and other helps. And we advertise persistently in sporting and outing papers, farm journals and other publications which reach rifle owners in city and country.

You can sell a Silencer with every rifle bought in your store—in addition to selling present rifle owners in your territory. Every sale means an extra profit.

Ask your jobber; or write to us for full particulars, prices and discounts.

Maxim Silencer Co., 104 Huyshope Ave
Hartford, Conn.

IT IS NOT alone the unusual *gun value* of the FOX—without which no gun is a good selling proposition—that makes it a good gun to handle, but it is this quality combined with our nation-wide advertising help that makes it a profitable gun to push. The

FOX GUN

is a

Business Getter---Business Holder

If this gun did not have an individuality—if it was not a whole lot more than "just a gun"—all the advertising in the world wouldn't help it make good. And our unbounded faith in the gun has been confirmed by thousands of proud FOX owners and enthusiastic FOX dealers.

There is every good-business reason why you should handle the FOX—therefore

Get In Touch With Your Jobber

Sharpening Stones

"NORCROSS"

Cultivator-Hoes and Weeders

WHEREVER vegetables and plants and flowers are grown, these famous implements are in great demand—and cost but little more than the common hoe.

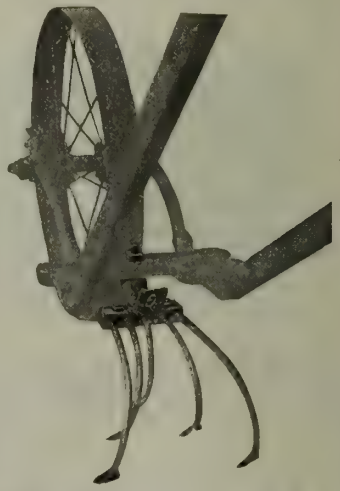
No garden is too small for the profitable use of a "Norcross" tool and every garden, large or small, represents a prospective buyer and every sale a good profit.

With a choice of three sizes at varying prices—including the highest quality that good material, workmanship and specializing can produce, you can satisfy every possible requirement of a customer.

THESE tools are light and strong and work closer to plants without injuring them than any other tool known, leaving the soil level, loose and untrampled.

Our 5-prong style is the only Cultivator-hoe having Detachable Ferrule (Pat'd) which provides for its use as a wheel plow attachment if desired. (See cut below.)

WE do not make nor handle wheel plows. The Cut here shown illustrates how our 5-prong tool will attach, by means of our UNIVERSAL CONNECTION furnished extra when desired, to retail at the small sum of 10c with good profit.



Professional gardeners say:

"No wheel plow has an attachment equal to the 'Norcross' Cultivator."

Our literature in English and Spanish gives complete and interesting information for both Domestic and Foreign trade.

ASK FOR IT

How the Hardware Man Can Make Money Selling Farm Engines

Every farmer is a prospect for a farm engine. Thousands of engines are being sold annually throughout Canada. The agricultural papers are full of farm engine advertising and long articles on the many uses and economy of the farm engine. Farmers read these papers very closely and are buying engines as rapidly as they can afford to. Farmers must come to the hardware dealer for supplies, and while there will look at a farm engine if you have one in stock.

You can add to your profits by securing the agency for a reliable farm engine.

FAIRBANKS-MORSE FARM ENGINES

Have an international reputation for reliability and long service. Farmers like them and speak well of them. Fairbanks-Morse engines are made in Canada, and are backed by a strong organization. We relieve you of all responsibility. Our engines are made in all the common sizes for farm use. By representing us you can supply any size or type of engine the farmer may need. The Eclipse engine shown here is in universal use and would be a safe engine to carry in stock, as there would never be a chance of your having it left on your hands. It is easy to sell. We are selling them all the time direct to farmers.

Write us in regard to handling our farm engines.

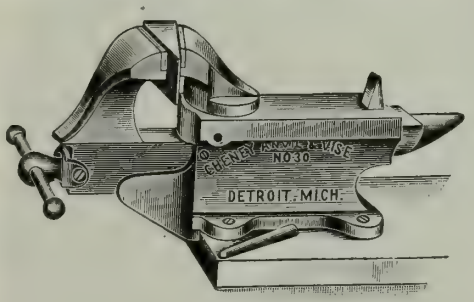
THE
DETROIT PATENT
"Sure Grip"

Steel Tackle Block

Will Hold Load at any Point without fastening the Rope. The heavier the load the better the grip. The brake is absolutely automatic and reliable.



It is the best and cheapest, because the same amount of money invested in ordinary tackle blocks will not begin to give the same amount of service.

The price of the "Sure Grip" is practically nothing over the ordinary block of same quality.

It will be found particularly valuable by Boat and Ship Builders, Contractors, dealers in Hardware and Machinery, Grocers, Truckmen, Butchers, Machine Shops, Founders, Roofers, in stringing heavy Electric Wires, handling Barrels, Baled Hay, Safes, in fact any place where hoisting blocks are used it will be found safe, sure and economical.

THE DETROIT CHENEY'S

Combined Anvil and Vise

It is the **strongest**, most **complete**, and useful tool of its kind made, and gives satisfaction to all who buy it. Its merits have created a **steady demand**, and it is kept in stock by most first-class Hardware dealers, both wholesale and retail. We use nothing but the best **car wheel** iron, so that the face of the anvil is always **chilled hard** and **smooth**.

It is made in four sizes, and is adapted for the use of Jewelers, Mechanics, Farmers, Miners and Planters, and is also found very useful as a household necessity.

FULTON IRON WORKS

22 Brush Street **Detroit, Mich., U.S.A.**

Long Service is a Natural Result of The "Twisted-While-Hot" Process

It must be annoying to the average drill user to have drills made from well-known brands of steel fall down on the job. He wants efficiency and can secure it by adopting "Hercules" High-Speed Drills.

"Hercules" High-Speed Twist Drills

are made from a High Percentage Vanadium High-Speed Steel under the only "twisted-while-hot" process that retains all the strength of the steel in the finished drill. The grain of the steel is undisturbed, insuring longer edge-holding and greater resistance to the strains of the metals having different degrees of hardness.
The taper shanks, usually one size larger than ordinary, prevent tang troubles and give a greater driving power because the drill fits into the chuck firmly and in the centre.
Your jobber will supply them or you can send order direct. Send for Catalog No. 82-G.

The Connor Low-Pressure Water Motor Washer

is a "business getter." It operates efficiently on a pressure as low as 20 lbs.—thus overcoming the chief objection to a water-driven washer. Housekeepers need it—and will buy it.

A profitable margin on sales makes this machine "a paying proposition" for you to handle.

J. H. Connor & Son, Limited
Ottawa, Ontario

Blue Steel!

You know how good it looks—that blue-purple temper on the best tools, deep blue, changing through all shades of purple, to palest straw.
You know how that coloring somehow connects up in your mind with the idea of quality—with the idea that the tool bearing it is worthily made—will stand up under the service for which it was designed.
Your customer feels the same way about it. He, too, is prejudiced by blue steel; he, too, feels the pressure of the tool's greatest sales-argument.
Insist on **British-American Wax Paper** wrappings on your stock and make sure that your manufacturers and jobbers ship you only tools whose greatest sales-asset has not been marred by unsightly rust.
You can't clean rusty blue tools either, because the blue is only skin deep and it will come off with the rust.
So, write them to-day and make your request. When they know how you feel about it, they'll be glad to comply,—for you satisfied, means your orders.

British-American Wax Paper Company, Limited
Darling Building, Toronto

Corrosion—

What Havoc It Plays With Sheet Metal!

One large Railroad System estimates that it loses 18 tons of metal daily due solely to corrosion. Think of it—6,570 tons per year!

What a criminal waste! Can you imagine the amount of money wasted by other users who cannot afford it as well as the railway company?

How Can This Waste Be Reduced?

When we are troubled with bodily ills we secure permanent relief only by determining and treating the cause of our illness. A headache powder may cure your headache temporarily, but it does not eliminate the cause. This brings us to our subject.

To reduce corrosion of iron and steel we must get down to the base—the metal itself. Protective coating alone is only a headache powder—a temporary relief.

The use of a sheet metal that will resist corrosion is the logical method of reducing the corrosion of iron or steel.

But is it possible to produce such a sheet metal and still have the price within reach of the average consumer? Fortunately it is more than a possibility—it is a reality.

We are prepared to furnish actual service tested material, not an experiment—

TONCAN METAL

Corrosion-Resisting Sheets

Are the Solution to the Problem

Toncan Metal is Corrosion-Resisting because of its purity, homogeneity and care used in its production. There is no more durable sheet metal made from iron ore than Toncan Metal. This fact has been proven by actual service tests covering many years.

Toncan Metal is moderate in price; in fact, lower than charcoal iron and only a trifle higher than steel. It can be secured in the flat sheet form and various styles of Roofing, Eaves Trough, Conductor Pipe, Culverts, Etc.

Mr. Dealer:

Lay in a stock of Toncan Metal Sheets and Products before your competitor does. Write for prices.

For complete data and proof cut this out and mail it to us to-day. →

FACTS

We can perform more functions by our modern wire carrier system, and with a greater degree of dispatch and certainty than can be accomplished by any other of this type of machine, all of which means that we can reach more points in a store and do so in a better and more satisfactory manner than has been accomplished heretofore. Remember our ten days' trial. You are invited to put us to the test. Send for our new catalogue G.

Nothing Adds So Much to a Mechanic's Pleasure and Earning Power as Good Tools

No.1 Fire Pot
Price Each $7.80 Net

"Birds of a feather flock together," is an old, true saying. Think of it. Isn't it true that good mechanics, have good tools, work for good people, receive good wages and are good citizens? Good tools and good mechanics come a trifle higher than poor and they are usually worth it. The No. 1 Fire Pot is acknowledged to be the world's best and is used by more mechanics than all other makes. Experience has proven that they could not afford to use any other make, even if they do cost more. Try a No. 1 and you will be pleased. Jobbers will supply at factory price, or we will ship direct if cash accompanies the order. Send for our catalog. It's free.

ST. THOMAS, Ont.
List on application, or representative will call

"Let me have a hammer,"

says one of your customers, coming into your store in a hurry. You show him an assortment and he selects the one he likes; then feels in his pockets and—"Bill," he says: "I haven't any change on me. Just remember this; I'll drop in to-morrow and pay you."

Of course you let him have it; he's a good fellow and you know him well—though he has no charge account with you.

But he forgets "to drop in to-morrow"—and you've both forgotten when he comes in a week later — **wanting something more.**

It's only a little thing—the price of a hammer—but, if you've got a big bunch of customers, and they forget to pay for things, like this, it mounts up at the end of the year to a formidable total.

Now remember, the man who pays for forgotten charges—is you. **You** have to foot this bill; from **your** profits comes the money to make good this loss.

That is why you cannot afford to be without the McCaskey Account Register, for it is an absolute protection against trade losses, such as these.

The McCaskey enables you to remember those odd sales, you're asked to remember,—no matter if you don't see your customer for a year after he made the purchase.

Besides this, it looks after your entire credit system; gently urges your lagging customers to pay up; prevents disputes; and ——does it all with only one writing.

Can your present system do as much?

If not, you need the McCaskey, and you'd better send for details, **right away.**

AGENTS WANTED

14 Years A Dealer But Finds No Better Fence Than PEERLESS

Read This Letter

Forestville, Ont., Jan 13, 1913

The Banwell-Hoxie Wire Fence Co.,
Hamilton, Ontario

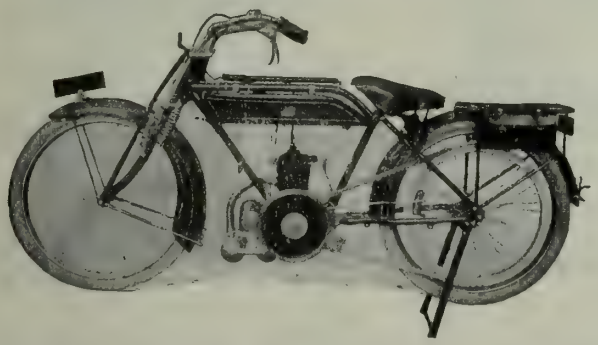
Dear Sirs:—I have been in the fence business for the last fourteen years putting up fence for farmers and have erected as high as four thousand rods per year. I have put up a good many different makes of fence but can positively say that "The Peerless" has given the best satisfaction taking into consideration even wire, no slack wires, no wires breaking, no wires rusting, and fence holding its tension which keeps the fence tight. "Peerless Fence" that I put up six years ago with posts thirty feet apart is tight and free from rust and does not sag.

Truly yours, E. G. Hooner

He's but one of the thousands of satisfied Peerless dealers—satisfied there's no better, no more profitable, no bigger producer of return orders than Peerless Fencing. His Peerless Fence agency is one of his biggest assets. If you had it you would say the same.

Peerless Farm Fence

is made of Open Hearth steel wire—heavily galvanized in such a thorough manner that it will not flake, chip or peel off. The wires are tough, elastic and springy and will not snap or break under sudden shocks or quick atmospheric changes. The joints are securely held with the "Peerless Lock" which will successfully withstand shocks and strains and yet, it can be erected on the most hilly and uneven ground without buckling, snapping or kinking. We also build a full line of poultry fence, ornamental fence and gates.



We Offer You This Coveted Agency

If you are located in our unassigned territory, we want to offer you the selling rights for this remarkable fencing. We want to add you to our list of satisfied, money making agents. We have a very attractive agency proposition. Want it? A postal brings it. Write today—now.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

Just Hand Your Customers The "Bayard" Baby Automatic Pistol, That's All

The Safest And Most Popular Pistol

Caliber .32 The Little Giant

Length of Pistol .....4¾ inch
Height of Pistol .....3⅜ inch
Thickness of Pistol ..... ⅝ inch

Penetration at 10 yards: Four ¾-inch Pine boards placed 2 inches apart.

Caliber 7.65 M/M A Midget Automatic

Weight of Pistol Magazine empty ....15¾ ozs.
Weight of Pistol Magazine filled ....17 ozs.
Initial velocity of bullet ..837 feet
Penetration 100 yards: Three inch Pine boards placed 2 inches apart.

Your customers will certainly be pleased when you sell them a "Bayard" Baby Automatic Pistol. Just the size that fits the pocket. The safety can only be actuated when the pistol is cocked. Therefore, there is no fear of an accidental discharge. Highest quality workmanship—all parts are interchangeable. Its size is that of a .25 Cal. pistol, although it shoots the powerful .32 Cal. cartridge. You cannot shoot it until it is properly closed, making accidents impossible.

Write for our descriptive booklet.

McGill Cutlery Co., Reg'd., P.O. Box 580, Montreal, Can.

It's The Little Things That Count

A few yards of wire cloth—a new roll opened before the old one is used—those odd lines poked out of sight and forgotten till they're tumbled upon accidentally. These are the sort of store leaks that add up to a formidable total at the end of each year.

Wire Cloth is awkward stuff to display—it's awkward to handle and to cut up unless you keep it on a

Bowser Wire Cloth Display Rack

where it becomes easy to sell as silverware and as easy to get at as your wrapping paper.

The "Bowser" saves floor space, is convenient and adds greatly to the appearance of your store.

Once you've tried it for a few weeks, you'll wonder how on earth you managed to sell wire cloth without it.

Write us to-day for prices on the various sizes.

R. M. Bowser & Son

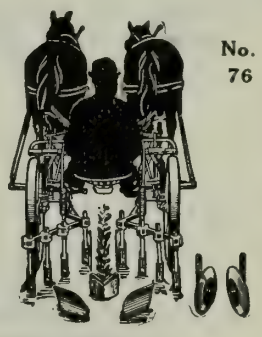
Dept. A. **RENFREW, PA.**

A User's Verdict

Pembroke, Ont., Aug 26, 1912.
Messrs. R. M. Bowser & Son,
Renfrew, Pa.

Gentlemen — We appreciate the Bowser Wire Cloth Display Rack. The space this occupies, and the convenience of having the different sizes of cloth in so little space, makes it a much-needed article in the hardware store to-day

The rack has earned its wages every day since we got it, and we try to only have things on our floor that **earn their wages.**



With best wishes, we remain,
Yours respectfully,
DEWAR & RYAN.

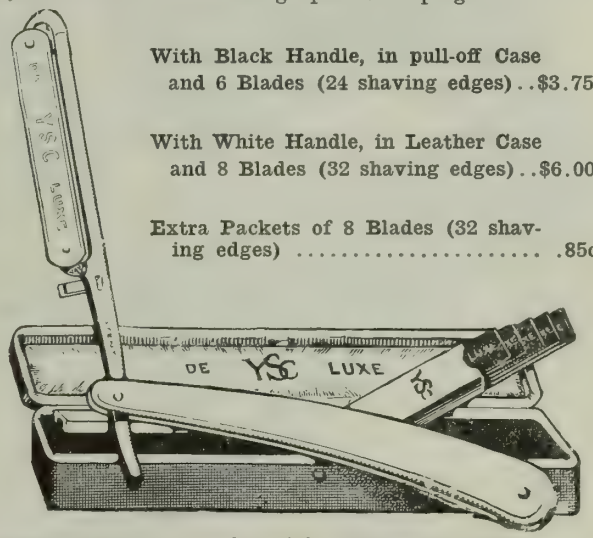
The New Self-Cleaning Y. S. C. Razor De Luxe

(Yorkshire Steel Co., England.)

THE **Y.S.C. SAFETY RAZOR** is as great an advance on other safeties as they were an improvement on the original safety of 60 years ago.
The very thin, narrow, highly-tempered blade is stretched taut in the frame, producing a much keener and more permanent edge than is possible with any other razor.
IT REQUIRES NEITHER STROPPING, SETTING, TAKING APART, NOR WIPING AFTER USE.

IT DRIES ITSELF !!!



With Milled Handle in Pigskin Case and 10 Blades (20 edges). $5.00.

With Fluted Handle in Russia Case and 10 blades, (20 edges). $7.50.

Extra Packets of 10 Blades (20 edges), 75c.

THE **Y.S.C. NON-SAFETY RAZOR** is like an ordinary clasp razor with this exception—it has a DETACHABLE DOUBLE-EDGED BLADE. It is just as convenient as an up-to-date safety and combines ALL THE ADVANTAGES of the Y.S.C. SAFETY. Think what that means! An ordinary razor ready to give a velvet shave every morning, with no preparation and no tedious stropping. After use, merely rinse it in hot water, shake off the drops and lay on one side. No taking apart or wiping.

With Black Handle, in pull-off Case and 6 Blades (24 shaving edges)..$3.75

With White Handle, in Leather Case and 8 Blades (32 shaving edges)..$6.00

Extra Packets of 8 Blades (32 shaving edges) ..... .85c

Write for Booklet H. The blades, when finished with, can be used up in the Y.S.C. Pocket Razor-Knife.

The MacLeod Safety Singletree Clips

For Use On

Wagons, Plows and Farm Implements

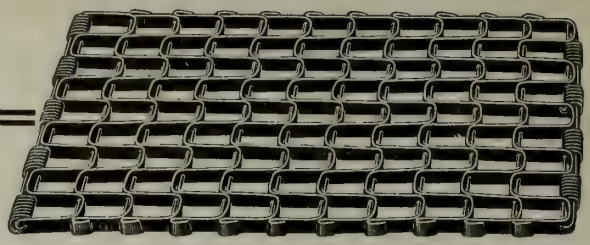
The MacLeod Safety Singletree Clips, which are good sellers, meet the Universal Demand for absolutely Safe attachments between Tugs and Singletrees.

STRENGTH—They are made of malleable iron and are so proportioned as to make them stronger and neater than the commonly used open hooks.

HOUSING OF SPRING—The spring is rust-proof and is so housed as to prevent its becoming clogged with mud or snow, and is thoroughly protected from mechanical injuries.

PREVENT ACCIDENTS—They are an absolute safety, prevent many runaways and fatal accidents, and remove the danger of going in behind nervous or kicking horses to replace fallen tugs.

The types especially popular are:—



1. Round Ferruled Safety Clips, made in four sizes, for General Use on all Wagons and Implements.
2. Square Ferruled Safety Clips, for use on Express and Delivery Wagons having Square Singletrees
3. Safety Clips with Round-Eyes, for Strap-End Singletrees.

Distributed through Wholesalers and Jobbers.

NICHOLSON made FILES

You're Known By The Goods You Sell

Sell a man a file that fails to give good service — and you're digging a pit for yourself.

When you give your trade **NICHOLSON-made-FILES—you give them** files that you **know** are absolutely right. You know that each file has been inspected eight times—between every important operation. You know the finished file **has been** tested on tougher steel than it will ever be used on in actual service. So that when you sell a **NICHOLSON - made - FILE,** you're certain it's going to give the utmost of satisfactory service.

No "come-backs" to fight — no excuses to make. Nothing to do but "sell more files"— and take your liberal margin per sale.

Housewives Want An Easy-Running, Strong and Serviceable Washer

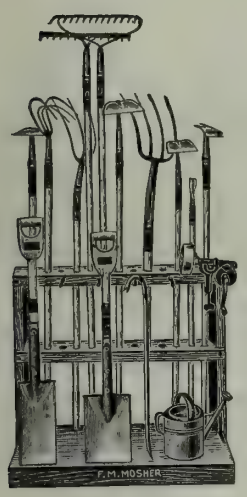
The "THERMO"

Fills The Bill And Pays A Good Profit

This washer is as easy to operate as a bicycle, the power being applied much the same way. Can be used with either the forward motion or up and down motion, simply by changing the lever. The two lever rachets make this possible.

The Therme Washer is built to wear and is solid and substantial. The tub is extra heavy and constructed in the best manner.

Legs are cross braced and absolutely rigid. Top is made double to prevent warping. The few working parts are simple and are not liable to get out of order.



Write for complete description. This washer wins trade.

"National" Electric Irons

Hold heat longest because they are solid. Consume less current than many two-piece irons—this is made possible by our leaf unit which is pressed tightly against the inside bottom of the iron. This construction prevents lost electrical energy. The "National" is simple—no parts to get loose or out of order.

Patent Applied For

Cut shows Toaster with Bread Rack pulled out.

The "National" Electric Toaster

is the only toaster on the market toasting both sides of the bread at once. Does the same amount of toast (and does it better) in the same length of time as any other two-slice toaster. More attractive because no unsightly wires or working parts are exposed.

The "National" Electric Stoves

The element in these stoves is of the leaf unit type and is pressed tightly against the heating area. By this construction there is no lost energy, making the "National" Stove very efficient. Top is finished in natural steel blue and is not affected by the heat generated.
We make a full line of Electrical Heating Devices. Drop us a card for complete illustrated catalog and prices.

MONTREAL, TORONTO, WINNIPEG, SASKATOON, Calgary

Head Office: PRESTON, ONTARIO

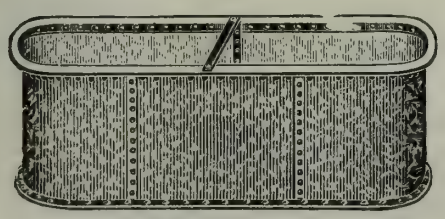
Associated with THE A. B. ORMSBY, Company, Limited

TORONTO and WINNIPEG

These Quality Goods assure satisfaction and are very profitable

OIL AND GASOLINE TANKS

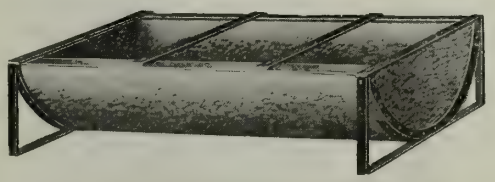
Made of heavy galvanized steel. Very strong and durable, and will stand much hard usage.
Screw cap opening on top to fill up by and a faucet in the side near bottom to draw off contents.
Prevents loss by vibration.



HELLER-ALLER FORCE PUMP

On the cylinder of a pump depends its strength and wearing quality. "H.—A. Co." Pump Cylinders are made of heavy brass tubing, which has a double advantage. It ensures the very best wear and permits the use of very coarse thread on cylinder caps (eleven threads to the inch). This prevents the cap threads from wearing or rusting off and dropping into the well.

H-A CO. FORCE PUMPS



are equipped with the most efficient, tried and tested valves. They never fail in service.

ROUND-END TANKS

These galvanized steel stock tanks are made very strong, so as to last under severe usage.

HALF-ROUND TROUGHS

These tanks have a steel frame or truss at each end They are built to stand up under the abuse to which such goods are subjected.

THE WORD

V-RAY

has never been questioned as being the true hall-mark of the best in

Spark-Plugs

The V-Ray stands head and shoulders above the competitive spark-plug field in Canada to-day, from both the viewpoint of quality and volume of sales.

When you sell a V-Ray, that V-Ray **stays sold.** With the advent of the 1914 season the V-Ray plug, with the

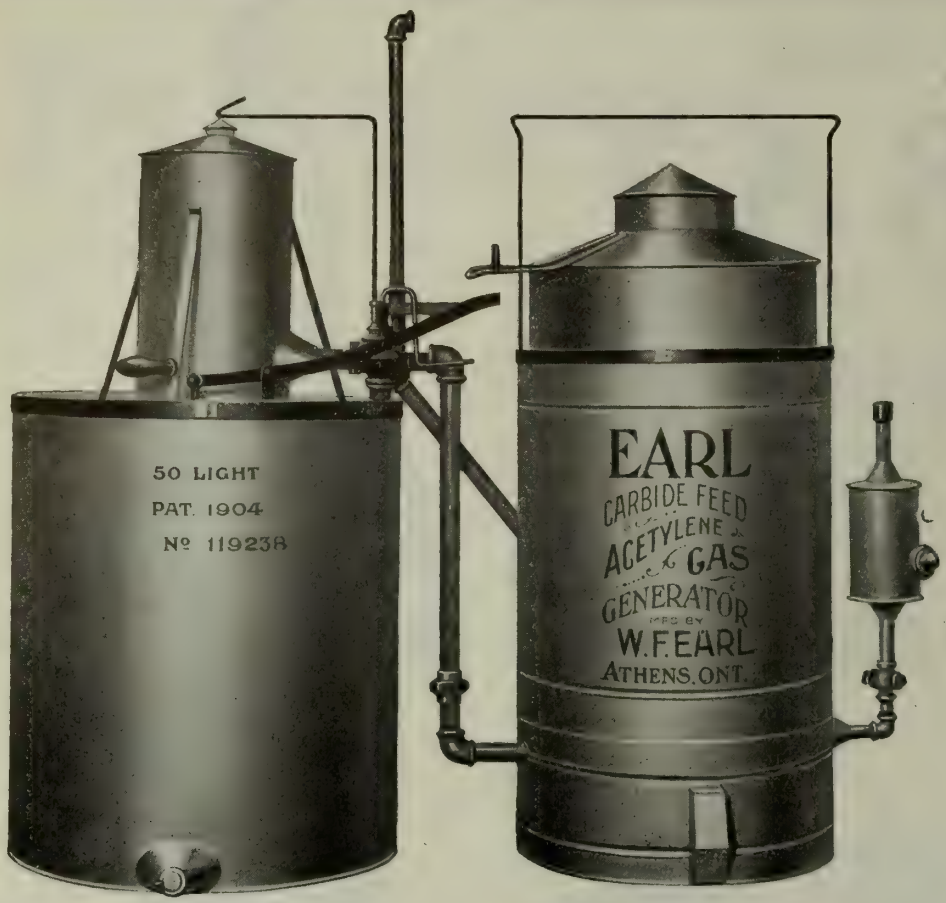
HARDWARE MAN

will resolve itself into as staple a commodity as a ten-penny nail.

"Let V-Ray Profits Pay Your Rent."

V-RAY PORCELAIN TYPE

THE PORCELAIN type, with its real porcelain core of English (imported) Kaolin, is a popular type because of the heat-resisting properties of this insulation. It is guaranteed to resist 2,700 degrees of heat. The electrode wires are genuine Meteor. A new plug gratis if V-Ray electrodes fail to withstand the most crucial heat; made in all threads; also in motorcycle. Ask about the V-Ray Ford Type $1.25



SECTIONAL "MIKA" TYPE

THE NEW "MIKA" type is truly an innovation. "MIKA" is **not** commonplace mica. The mica plug of the past has been regarded with much skepticism because of its tendency to oil-soak. Through the V-Ray Co.'s secret "flinting process." V-Ray "MIKA" is rendered "Positively Impervious to Heat and Oil." We guarantee it to be exactly what we claim for it $1.50

V-Rays outlast the average motor.
Learn more of V-Rays in alternate issues of HARDWARE AND METAL.

LIMITED
Hamilton and Toronto

The N.C.R. Receipt Benefits Merchants In 10 Ways:

1. It increases profits.
2. It stops mistakes and losses.
3. It advertises their business and increases trade.
4. It is plainly printed and cannot be changed.
5. It guarantees a printed record of every article sold.
6. It tells the date the sales were made.
7. It protects employees against temptation.
8. It shows which employee is most efficient.
9. It shows in dollars and cents the same amount that is recorded inside the register.
10. It enforces correct records which cannot be lost or destroyed.

The C.N.R. Receipt Benefits Clerks In 10 Ways:

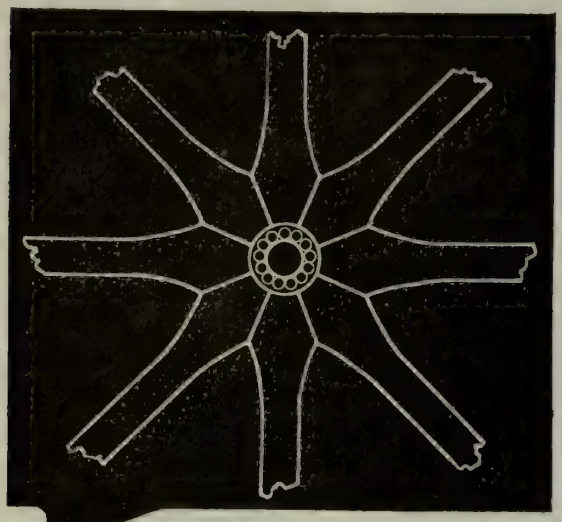
1. It removes temptation.
2. It makes clerks more accurate.
3. It prevents unjust suspicion.
4. It helps clerks make good records.
5. It prevents disputes with customers.
6. It prevents forgetting to charge goods.
7. It enables clerks to wait on more customers.
8. It furnishes accurate records of each clerk's sales.
9. It prevents one clerk being blamed for another's mistake.
10. It helps to prove the clerks' honesty, accuracy and ability.

If merchants knew of these 10 benefits, they would give N. C. R. receipts for all money taken in.

We make cash registers for 286 kinds of businesses.

If clerks knew of these 10 benefits, they would want N. C. R. receipts used in all stores.

National Cash Registers print many different kinds of receipts.



They are a necessity wherever money transactions take place.

Considering what they do, National Cash Registers are the lowest-priced machines sold in the world.

The National Cash Register Company

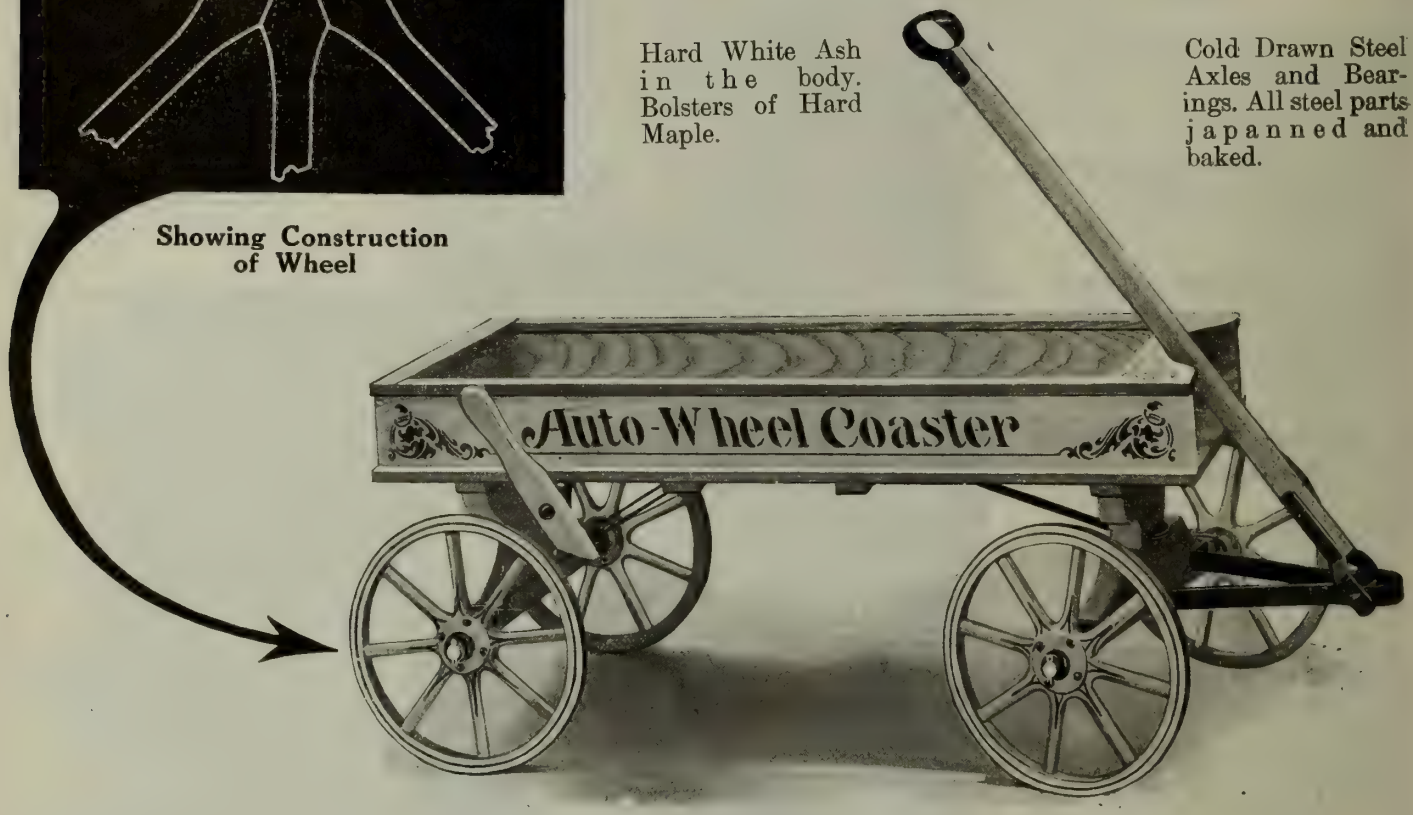
Showing Construction of Wheel

The New Auto-Wheel



Roller-Bearing

Coaster Wagon

has Construction, Durability and Appearance never before put into a Boy's Wagon.

Hard White Ash in the body. Bolsters of Hard Maple.

Cold Drawn Steel Axles and Bearings. All steel parts japanned and baked.

Spokes are ovalled, and mitred and machine riveted in hub, with bushing turned over the ends.

The Felloe is ½" x ¾", with tire of ⅛" x ¾" flat steel, electrically welded, and shrunk on felloe by hydraulic pressure. It can never shrink loose or come off and ensures a perfectly true wheel.

We have over **30,000 wheels working for us** and less than one dozen have come back to the factory.

Buy a sample wagon—compare it with any other you know—then send it back if not satisfactory.

The illustration on right is an excellent example of the strength of the Auto-Wheel Coaster. This wagon was used in a factory and frequently carried a heavier load without strain on the wheels.

If your jobber does not carry the "Auto-Wheel" write us direct.

It's a very profitable line.

REMEMBER—This wagon has been time-tried and tested for strength and is sold with a guarantee to be as we say or money refunded.

(OUR MOTTO)

The most reliable extension ladder offered to the trade to-day. Made of clear yellow pine with hardwood rungs. Reinforced with wire let into a groove on the back of the ladder. One of the principal features of our ladder is the heavy malleable iron castings bolted on the sides which have given satisfaction for years. Stock sizes 20 to 40 ft.

Write for catalogue and prices for step ladders, bake boards, skirt boards, curtain stretchers and other woodenware.

Reducing Pressure Valve J. M. T Improved. The valve that operates under all conditions.

Grease Cups

If You Want to Increase Your Sales

The sale of Steam Specialties and Valves by the Hardware Trade is a big line waiting development. Given proper attention and effort it can be made one of the most profitable, if not the most profitable, in the hardware business. Every Plumber, Steamfitter, Engineer, Contractor, and every Factory, offersan outlet for Steam Specialties and Valves, if educated to buy through the Hardware Trade instead of going direct to the big houses.

Brass Goods for the Power House and Factory.

93-97 Adelaide St. W. **TORONTO, CAN.**

—Morrison Steam Goods are approved in the Provinces requiring Government Inspection—

Just as
there are several grades of

Enameled ware

so also
there are several grades of

Aluminum ware

It pays to know why they are not "all the same"

"Wear-Ever"

The Reason Why

The enormous pressure of rolling mill and stamping machine makes the metal in **"Wear-Ever"** aluminum cooking utensils dense, hard and smooth. The "case-hardened" surface of the metal is made still harder by electricity—which makes the inside of the utensil darker, smoother, less liable to be discolored and more easily cleaned.

"Wear-Ever" Aluminum Utensils

are stamped from thick, hard sheet aluminum—are made without joint, seam or solder. The less aluminum is heated and the more it is "worked" the harder it becomes. Consequently stamped utensils are rigid, are not easily dented nor softened by being heated.

Demand for **"Wear-Ever"** utensils exists—has been increased each year for eleven years by consumer confidence, by sample-demonstration work, and by magazine advertising.

Names of Customers, Cards to be used in circularizing them, Folders for distribution, Ad Book, Window Display Book, Demonstration Book, Display Cards and Picture Slides are at the service of **"Wear-Ever"** dealers.

Write for printed matter. Address

"Wear-Ever"

Following the recent fire

we will rebuild our Galt factory on a larger scale. In fact plans have in view one of the most up-to-date and best equipped saw factories in America.

In the meantime

our factory in St. Catharines, and our temporary one in Galt, are working to the limit to meet the strong demand for Maple Leaf Saws.

Shurly-Dietrich Co., Limited

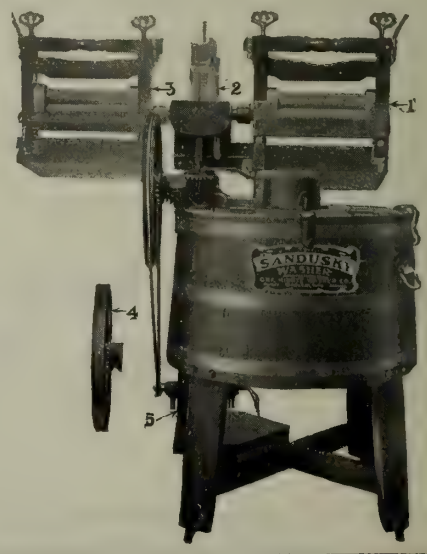
GALT, ONTARIO

and 1642 Pandora Street, Vancouver, B.C.

Sandusky Power or Electric Washer

Here is a thoroughly practical Washer, one that will do a family washing right at home, under sanitary conditions and save from $1.00 to $3.00 each week, enough to pay for it in a short time.

Every Dealer who has stocked it has found it exactly as represented—first-class in every respect and a splendid seller.



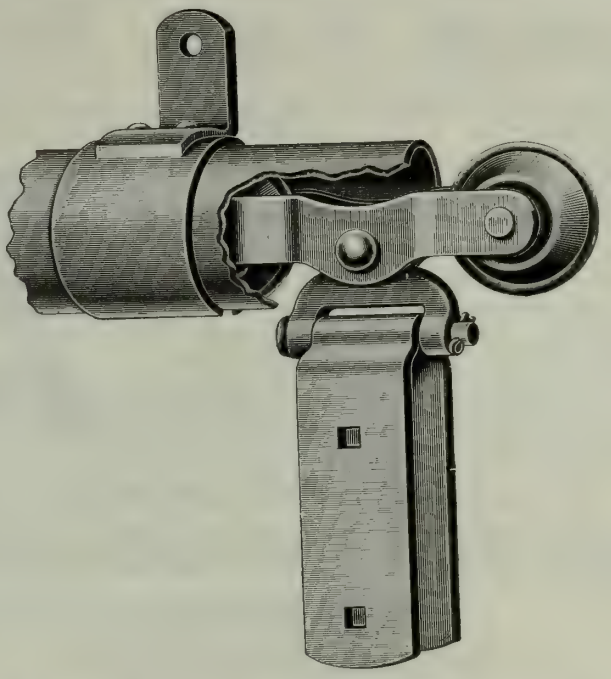
Every woman is captivated by the way it starts automatically and by the perfect condition of the clothes and their snow-white cleanness after washing. You will find it

A Trade-Bringer

worth handling, because every woman who gets one recommends it and sends more customers to you.

One big selling point which takes with prospective buyers is the novel wringer device. It permits wringer to be started, stopped, reversed or swung to any position. And while the washing is going on, the wringer will wring from the rinse water to the bluing and from the bluing right into the basket. The construction of the entire Washer is the best possible.

Space won't permit full details, but if you'll write we send them and tell you about our Guarantee Certificate plan which helps you make quick sales. Our proposition is worth sending for. Don't neglect it.



The One Minute Washer Co,

SANDUSKY, OHIO, U.S.A.

Western Canada Distributing Agents:

Cash In On The "Cannon Ball"—

Profits—more of 'em—easier-to-get profits—if you'll only "cash in on the Cannon Ball." Right now—in your community there's a big demand for Cannon Ball Hangers. The minute you show a "Cannon Ball" your customer says "That's what I want"—and the sale is made.

Here's Why It Sells—

Water, weather, wear and bird-proof—can't jump the track—will run as smoothly after years of use as it did the day it first went up.

Your customers know that the Cannon Ball Hanger offers all the advantages of other kinds and many exclusively its own.

You can't get around it. Hanger competition stops the day you stock the Cannon Ball.

Off Go The Old Hangers— On Goes The "Cannon Ball"

Don't wait for new barns to be built.

Show the Cannon Ball Hangers to every farmer who comes in.

Demonstrate their advantages over the old-style hangers now on the barn—then—off go the old hangers—on goes the Cannon Ball—and your cash register rings again.

HUNT, HELM, FERRIS & CO.

MANUFACTURERS OF

THE H H F & CO. STAR LINE GOODS

HARVARD, ILLINOIS

Do You Know What "Star" Stands For ?

Back of the "STAR" trademark is the biggest factory of its kind in America and the largest line of barn hardware and specialties on the market today.

Stalls, stanchions, feed and litter carriers, hay tools, door hangers, tank heaters, hoists, etc., we make them all and guarantee every item.

If you want to find out why it's to your advantage to buy all these lines under the "STAR" trademark, write us—we'll tell you—**gladly.**

No.384 Cannon Ball Barn Door Hanger—

Here's a popular style of the Cannon Ball. Noiseless, tandem, flexible, frictionless, long roller bearings, steel truss frame, light running, wide tread, steel ball wheels, completely enclosed in track. Water and bird-proof.

Stock Cannon Ball Track Under Your Counter—

It comes in 3 ft. sections—32 pieces to the crate. You can easily stock 96 feet under the counter—out of the way and give a customer as much or as little as he wants.

THE "DIXON" ROTARY LAWN MOWER

and its improvements over all other makes

The **Floating-Knife Bar,** which is swiveled on the tie rod that ties the back end of the mower securely together, and; with the tie rod at the front, makes the most rigid frame to be found in lawn mowers.

You will notice at each back corner of the bed knife a **Compression Spring.** These press the cutting edge of the bedknife up against the reel, or revolving knife, always adjusting itself.

We make the Dixon with a **Thrust Ball-Bearing,** which is the same as is used in automobiles, making it the best.

The knives throughout are crucible steel.

The lower bed knife is crucible lip steel.

This lawn mower will cut heavy grass without raising the handle and without lifting up behind and choking.

Drop us a card for full particulars and price.

The Dixon will make your lawn mower department show better results.

Clipper Lawn Mower Co.

Dixon, Illinois, U.S.A.

This Business Started with AN IDEA —twelve years ago!

That Idea was

"A New Way of Tying a Horse"

The story of the Griffith Industry reads like a page from a book of romance. And yet each step on the road to a phenomenal success has been taken slowly and deliberately, after mature thought and careful consideration.

In the year 1902, at Melbourne, Ont., this business was started in the tiny, one-storey building shown in the first illustration above. This building was 12 x 16 feet, and for three years we confined ourselves to making up a wagon-load of halters at a time, driving through the country selling them to dealers—and then making up another wagon-load.

But Griffith Halters had merit, and before long the orders began to come in—slowly at first—then at shorter intervals—until it became necessary to enlarge our output to take care of the orders which poured in upon us in ever-increasing volume.

So, in 1907, we built a two-storey addition, size 18 x 70 feet, to our tiny "factory" in Melbourne. This gave us a total floor space of 2,520 square feet. Then the business began to assume the proportions of an "industry." Output was increased and made to keep pace with the demand. New lines were tried out, adopted and added to our line. And, once again, the business outgrew its quarters.

The next step was a "move"—from Melbourne to Stratford—where a commodious factory building was secured and bought outright. That building, the present home of the Griffith Industry, is shown at the extreme right of the illustration. It is thoroughly modern in construction, size 40 x 80 feet, 2 storeys and basement, providing a total floor area of 9,600 square feet.

That was in the early part of 1913, and during the 15 months which have elapsed since the removal to Stratford, our business has shown an increase of 75% over any previous year in our history.

MODERN EQUIPMENT
for
HARDWARE STORES

Dennisteel
Steel Cabinets and Shelving

ADVANTAGES

Permanence. With ordinary usage, steel equipment will last indefinitely. Its first cost is final cost.

Fire-proof. Fire often gains uncontrollable headway in wooden cabinets and shelving. Steel equipment eliminates this risk.

Reduces Insurance. The underwriters recognize steel equipment as reducing the fire hazard.

Finer Appearance. Between clean-cut steel equipment and wooden fixtures there is no comparison in appearance.

ADVANTAGES

Vermin-proof. Worms so destructive to wood and all vermin find no breeding places in steel fixtures.

Sanitary. Steel equipment is more easily kept clean. Steel, unlike wood, absorbs no moisture or odors. It is germ-proof.

Less Floor Space. Smaller thickness for the same strength, make steel fixtures more compact than wood.

ADVANTAGES

Non-breakable. Steel will carry a maximum weight without break or strain. Doors and drawers will not warp or stick in damp weather.

Easily Dismantled. Steel equipment comes apart easily, and can be moved and again put together with ease by store employees.

Flexibility. Built on the unit system, sections can be added as requirements expand. Shelving can be changed to bins without trouble.

Modern in every sense is steel equipment. The above is one of many styles of arrangement of shelves, drawers, cabinets and bins. The cost is little more than for wooden fixtures. Our steel equipment is built so it can be adjusted and extended to suit varying conditions, and for this reason stands as a permanent asset. Finished in black or olive green enamel. These finishes are baked and will last indefinitely.

When writing give as clear an outline as possible of the equipment you have in mind. We are always glad to submit drawings and estimates.

The Cadillac Electric
Vacuum Cleaner

The Cadillac Line
OF
Vacuum Cleaners

Less than a year ago we opened our Canadian office and factory. Since then we have appointed nearly 500 agents throughout Canada; Cadillacs (both electric and hand-power), are being sold now in all parts of the Dominion from coast to coast. The volume of business closed has far exceeded our most sanguine expectations. We are, however, looking forward still, and

Live Agents are Wanted

If you do not handle the Cadillac Line of Vacuum Cleaners, write to us for our splendid agency proposition. Cadillac cleaners assure satisfied customers. Each machine is thoroughly tested before it is sent out, and carries an absolute guarantee for one year.

The Cadillac Electric is light (total weight 8 lbs.) is, therefore, easily moved around; takes up but small space; has reliable motor, built specially by Canadian General Electric Company; and is but 6⅝ inches high, allowing user to clean under beds and furniture easily without heavy moving being necessary. There are also attachments for cleaning walls, furniture, draperies, pillows, mattresses, etc.

The latest model of the "Cadillac" hand Combination Vacuum Cleaner and Carpet Sweeper is one we know will win instant approval from housekeepers without electric power. It has convincing selling points that make "sold" customers out of even doubtful prospects.

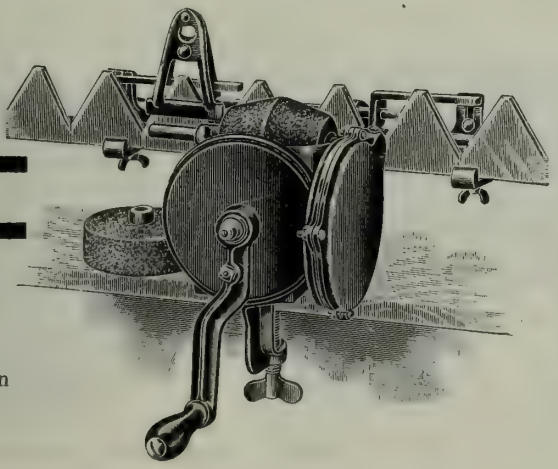
American Grinders

—The only Grinders with a Positively Oil-Tight Case, Gears Operate in Bath of Oil!

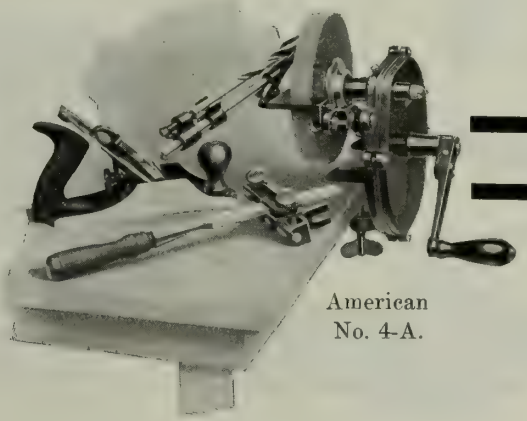
BEYOND all question—the best grinders built. That's the claim we make for the American Line.

American Grinders make an instant appeal to the man who knows good tools. They're simple—strong—smooth-running—**and they're built for service.** They're the only grinders made that have a positively oil-tight case. The gearing works continually in a BATH OF OIL—and that means double life for the machine.



In Design — Finish — Construction — Materials — and Mechanism, American Grinders outclass all other makes.

Manufacturers, mechanics and farmers—all grinder users—are getting sick and tired of cheap, rattle-box grinders. They're ready for a **real outfit**—and you can get the cream of the business with the American line.



Just note the sickle grinder illustrated below. It's not a bit too early to get a stock of these on hand for next year's business. Also size up American No. 4A. We make 9 sizes of Grinders for general work.

Remember, Mr. Dealer, American Grinders lead the field. A sample order will prove that statement absolutely. Write for Catalogue and Discount Sheet to-day. The handsome all-metal Display Stand, shown above, is furnished free to dealers. Ask for particulars.

Big Profits for YOU in J-M ASBESTOS ROOFING

The demand for a ready roofing that gives absolute fire protection is growing by leaps and bounds.

Hundreds of hardware dealers have taken advantage of this condition, and are building up a big business in J-M Asbestos Roofing.

This is the only *all-mineral* ready roofing on the market. Made of alternate layers of Asbestos felts and Trinidad Lake Asphalt. Literally a sheet of pliable stone. Contains nothing to rot, rust, crack or deteriorate.

Never requires coating, gravel or protection of any kind. Lower in first cost than tin or slate—and cheaper than all other roofings when cost-per-year is considered. Adapted to all types of buildings in any climate. Easy to apply.

J-M Roofing Cleats, packed in each roll, make absolutely watertight laps and give the entire roof a handsome white appearance.

There is a liberal profit for you in this roofing. Customers are quick to grasp its advantages. And one sale leads to many others. **Write nearest branch for Booklet and Special Dealer Proposition.**

Consult Your Travellers

Your advertisement in Hardware and Metal reaches the cream of the Canadian hardware trade. For over 25 years the most progressive and up-to-date retailers have contributed to its columns and depended upon its weekly market and merchandising information. This is the sort of connection that makes a paper valuable to its advertisers.

We want you to investigate these claims. Suggest to your travellers that they ask their customers

1. **If they subscribe for Hardware and Metal?**
2. **If they watch its markets from week to week?**
3. **If they find its merchandising articles of practical use?**
4. **If they consult its advertising pages?**

When you get this information you will want to place an advertisement with us immediately, or increase the one you already have.

You will be asked to spend your good money in many quarters this year of 1914. Why not investigate and see that you get value received?

ONE OF THE MANY ARTISTIC HOMES COVERED WITH

Red Ribbon Asphalt Slate Shingles

The asphalt from which these shingles are made is almost indestructible and absolutely the best water-proofing element known. Compared with iron or tin roofings, asphalt shingles are superior in every way. They will not rust or break at joints. Red Ribbon Asphalt Shingles are very durable. They are sold on an absolute GUARANTEE to resist any weather conditions in any climate.

We can offer you an exceptional profit-making opportunity in the selling of Red Ribbon Asphalt Slate Shingles in your town. Drop us a card for our proposition.

We manufacture a line of Rubber Roofing that's very high in quality.

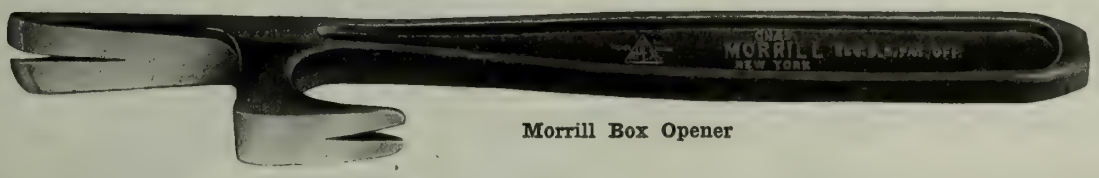
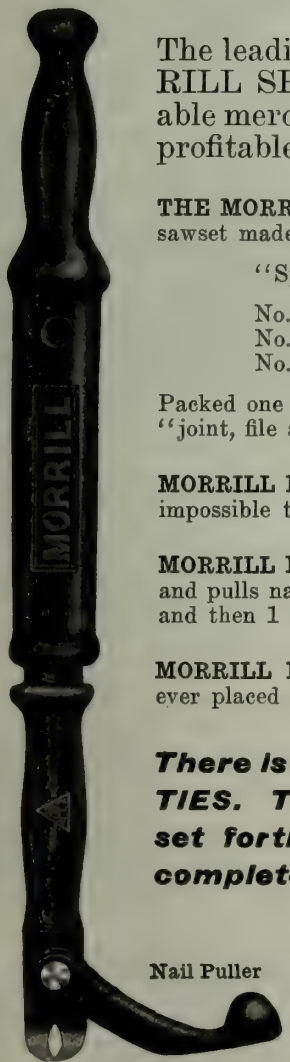
Morrill Specialties



THE "SPECIAL" SAW SET



MORRILL'S NO. 3 & 4 SAWSETS

lead in style and satisfaction

Morrill Box Opener

Nail Puller

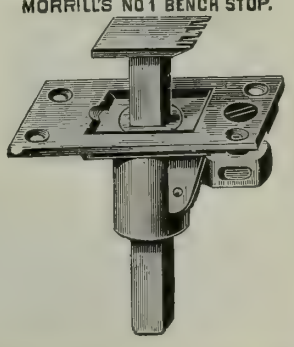
The leading hardware stores in almost every city and town carry the MORRILL SPECIALTIES. Shrewd, far-sighted business men know that dependable merchandise forms the only sound foundation upon which a lasting and profitable business can be built.

THE MORRILL SAWSET is the only one that will properly set a saw, the only mechanically perfect sawset made.

"Special" for hand saws not over 16 gauge.

No. 3 for single tooth cross-cut and circular saws 14 to 16 gauge.
No. 4 for double tooth cross-cut saws 14 to 16 gauge.
No. 5 for timber and board saws 6 to 14 gauge.

Packed one each in a neat carton containing full instructions, uses, warrant and circular on how to "joint, file and set saws." Then packed ½ doz. in wooden box.



MORRILL BOX OPENER. Opens boxes without destroying them. Drop forged in one solid piece, and impossible to break. Packed one dozen in a wooden case.

MORRILL NAIL PULLER. Made of drop-forged steel, requires only half the power of other pullers, and pulls nails twice as fast. Packed one each in a paper carton with full instructions and warrant, and then 1 doz. in wooden case.

MORRILL BENCH STOP. A great time-saver, and makes work easy. The most useful bench stop ever placed on the market. Packed ½ doz. in wooden box.

There is no disappointment in MORRILL SPECIALTIES. They live up to the last letter of every claim set forth for them. Send for catalogue of the complete MORRILL line.

MORRILL'S NO 1 BENCH STOP.

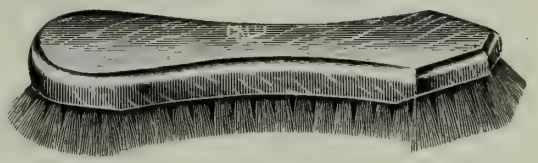
Wilt Twist Drills are Making Good

One big bridge building company is getting more than twice the amount of work out of Wilt Twist Drills than they ever got out of any other makes. Wilt Drills are standing up better. They are cutting faster and lasting longer — They are better Drills. A number of big railroad shops are now using Wilt Drills with equally gratifying results.

Wilt Twist Drills are made complete from the rough bar to the finished drill at a single chucking. Note the contour of Wilt Twist Drills. You will see that the groove is so designed as to give maximum strength with perfectly free cutting — The clearance is well defined and accurate. Wilt Drills are better drills.



Ask your supply man. Write for Literature.

Stanley Tools

Carpenters' Steel Squares

A New Stanley Line

Stanley Steel Squares are made with the same careful attention to detail and the same high quality of material and workmanship as distinguishes all STANLEY TOOLS.

Every Square is weldless, or, in other words, made from **one** piece of steel, and all four edges are machined. Particular attention is called to the finish of all numbers and the depth and accuracy of the graduation.

They can be furnished in a number of different styles and the variety of finishes offered include Royal Copper, Blued, Nickel Plated, Galvanized and Polished. All Royal Copper and Blued finished Squares have white enamel figures and graduations.

Each Square is packed in an anti-rust wrapper and this stamp STANLEY NEW BRITAIN CONN USA appears on the face of all numbers.

Send for special circular containing complete description.

The "BEST" Fuel Chute

IS PROVING A GOOD SELLER WITH LEADING DEALERS EVERYWHERE

It sets flush with the wall, on the outside of building and is 28 in. long on top. The Frame and Door are Cast Iron, the tube is made of No. 16 steel.

The cover is held open by the hook on the door engaging with the hook on top of frame; the door opening up protects the siding of the house. The "Best" has a flange overlapping the top of door, thus preventing the rain from running down the Chute and rusting it out.

Write for prices and full particulars.

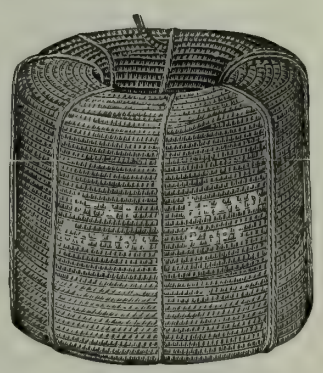
STERLING, ILLINOIS

EVERY RETAILER In Saskatchewan

should attend the Annual Convention of the Saskatchewan Branch of the Retail Merchants' Association of Canada, Inc., to be held in

Moose Jaw, March 23, 24, 25.

Keep the date open, and make it a point to be present.



There are 1,200 Retail Merchants in this Province working in co-operation for the good of the Retail Trade. Help swell the number.

Convention rates over all lines, and a hearty invitation from the City of MOOSE JAW.

Remember the dates—March 23, 24, 25.

Let us work in unity, for in co-operation lies our strength.

For further particulars apply to F. E. Raymond, Secretary, Saskatchewan Provincial Board, Box 475, Saskatoon.

The Long Green Lasting

Has the strength, the body and the consistency that are essential to re-orders

There are paints and paints — but "Bronzite" is the green that is different—it lasts, it wears and holds its color.

We make a specialty of our green — give it nearly all our time and attention — been experimenting, testing, proving and bettering it for ten years and more.

A test of this paint under actual working conditions is all that is needed to prove its exceptional merits.

Write for color cards and particulars.

Used on all work where a green paint is needed.

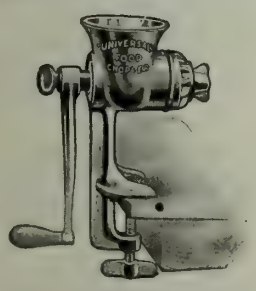
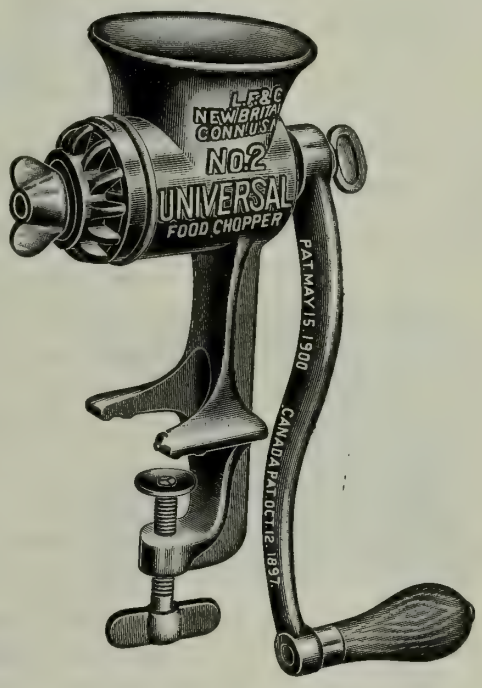
Special Offer on "Universal" Food Choppers



No. 76. "Universal" Aluminum Percolator.

No. 200. "Universal" Tea Ball Tea Pot.

No. 4. "Universal" Bread Maker.



No. 2. "Universal" Food Chopper.

WE BELIEVE by featuring "Universal" Food Choppers—making a big display of quantity in windows and in conspicuous places in the store—any retail dealer can greatly increase his Food Chopper business and dispose of at least six dozen in a comparatively short time.

WE BELIEVE if hardware merchants knew the merits of the "Universal" Bread Maker, Food Chopper, Percolator and Tea Ball Tea Pot by personal use in their homes the business on all of these items would be materially increased to their advantage and to ours.

THEREFORE, in order to prove these two great theories we will send, without charge, for the personal use of any retail dealer who will place an order for six dozen "Universal" Food Choppers to be shipped by his jobber before April 15th, the four "Universal" Home Needs shown at the left.

Selling Points

The "UNIVERSAL" Food Chopper is the original and only genuine shear-cutting, self-sharpening and self-cleaning food chopper. It is beautifully tinned—looks bright and sanitary and appeals to the purchaser. The "UNIVERSAL" Food Chopper has been consistently advertised in woman's magazines for 15 years—best known and easiest to sell.

Knowledge is Power—The Power to sell goods.

Opportunity knocks but once—This is yours—Grasp it now.

For further details, ask the the first salesman that calls.

Write to your jobber or write direct to us.

IN THE SPRING

the attention of owners and builders turns to Building Materials. Metal is recognized as a leader for all classes of work.

Western Canadian Hardwaremen have a service right at their doors that is being operated exclusively for them. When you want

Metal Ceilings, Metal Shingles, Metal Sidings
Corrugated Iron, Eavestrough
Conductor Pipe, Skylights, Cornices, Ventilators

As well as Galvanized Iron, Black Iron, Canada Plate or Tin Plate

Send your order to the place from which you know you will get not only good materials but quick service. Our dealers are making money, because they do not have to make excuses for delays, and their customers know they get goods from them quickly.

How much more of this business can you get? We can help you increase your sales in these lines.

DEALER

This Lock, Mr. Farmer, is the one used in our "Great West" Fencing

You might possibly get some cheaper fence than ours, but you will look in vain for any better.

Our Fences are made in the West, designed especially for the Western trade, and we guarantee every Rod as to strength and durability.

It is the "Standard Fence" of our "Great West."

Write for our illustrated catalogue and price list.

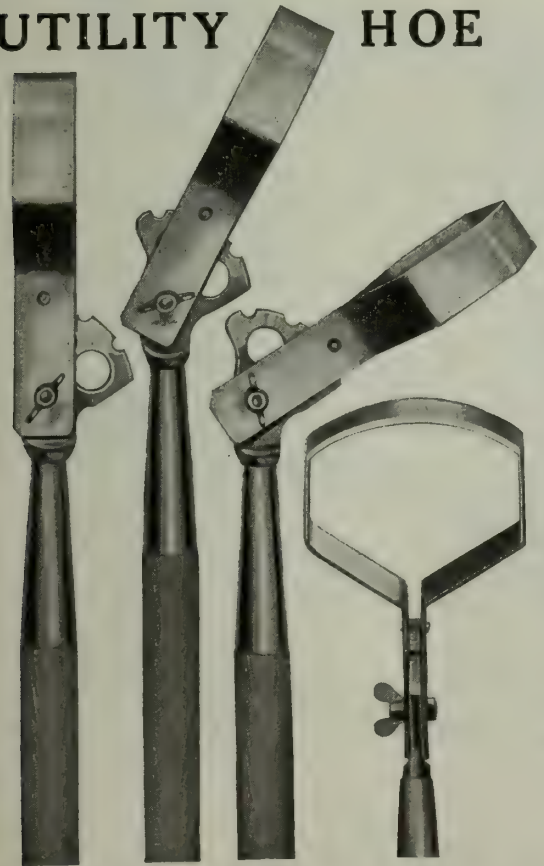
Toledo Garden Hoes

MADE IN CANADA

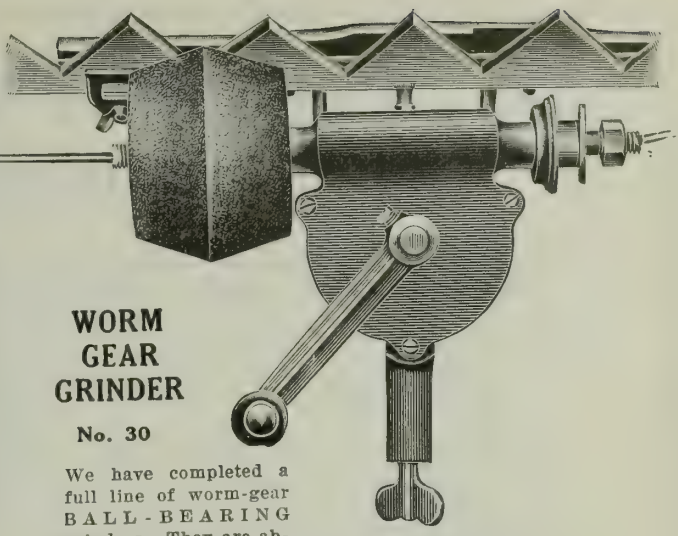


Blades are made of high-carbon spring steel, securely riveted to malleable-iron socket. A high-grade Hoe at a low price. Made in four sizes.

Catalogue upon Request.

MANUFACTURED BY

The Adamite Wheel & Mfg. Co.
HAMILTON, ONT.



THE UTILITY HOE

The UTILITY hoe is made in two sizes — four and six-inch blades. Each blade has two cutting edges. The blades are made of 1⅛-inch ribbon steel and can be adjusted to suit the heighth of the operator. The shank castings are malleable. Every hoe is equipped with a first-class handle.

WORM GEAR GRINDER

No. 30

We have completed a full line of worm-gear BALL-BEARING grinders. They are absolutely noiseless, oil-retaining, dirtless, fast and easy-running; made for both sickle grinding and tool grinding.

No. 30 is fitted with a large sickle wheel, 4¼" in diameter, with malleable iron attachments.

PERFECTION GRINDER No. 2

This is a very practical size machine, and it will prove a very good seller. Made of material of a quality that assures maximum service and satisfaction.

Fitted with combination tool rest, chisel-holder, etc., making it the most valuable machine on the market.

AJAX SPARK PLUGS

A standard form of Spark Plug construction, using conical type porcelains and best mica insulation. We have made the same goods in the same way for years, and have not found it necessary to change. The sparking points are non-corrosive, and will not disintegrate with heat.

SPECIAL LONG PLUGS
of most improved type

These styles should be carried by all dealers, as they satisfy an increasing demand for certain makes of engines. For Special ½-inch Plugs have an extra long body, admitting of ready wrench manipulation.

"Spark Plugs that Canadian Dealers will Find Profitable"

We will be pleased to send full particulars on any of the above-mentioned lines. They are all very profitable and reliable.

Write now, lest you forget.

Star Specialty Mfg. Co.

227 West Erie Street, CHICAGO

"Health, Kindness and Courtesy"

¶ Everything in this world is largely attitude of mind. No day is beautiful to the man who has indigestion or who has spent the night before at a 'smoker.'

¶ If we radiate good health and good cheer we will get these things back in return. Good humor, courtesy and kindness, pay splendid dividends—and a good long while ago someone said: "As ye sow, so shall ye also reap." This is a fact in Nature, and while we are not indebted to any book or particular individual for this fact, it is, however, a truth which we oftentimes overlook.

¶ A grouch begets a grouch. If a man thinks failure, talks failure, contemplates failure, fears failure, then, verily, failure is on the wing and the spiders are weaving their webs over the door of this man's success. These things constitute what is known as personality, and personality is experience and observation put through a refining process. People with splendid and magnetic personalities have little to say about headaches, indigestion, tonsilitis and appendicitis, because these do not constitute personal magnetism.

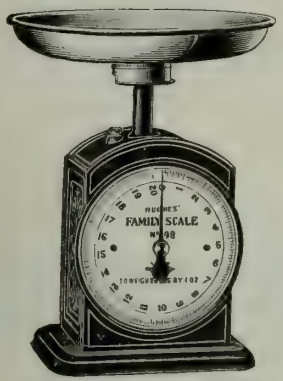
¶ The generally accepted theory among intelligent folks nowadays is that a large per cent. of sickness is the result of a large per cent. of foolishness—and people not being anxious to advertise the fact that they have been foolish, silly or indiscreet, say very little about their aches and ills.

¶ If a man sets out in life to accomplish certain things and is willing to sacrifice enough to accomplish his particular purpose, there is hardly any probability that his ambitions will be defeated—unless he should come in contact with a street car or a benzine buggy—and so it is a fact that **we get back just about what we give.**

¶ If we assume an attitude of grief and despair, and carry our troubles, domestic or otherwise, to the office, tell our co-workers about our sleepless night, tell our troubles and ailments to our friends, discuss the latest death with our customers, rehearse the sickness of the community, then we naturally put a clog in the affairs of the day; in other words, we have cut off the power and our business gets indigestion, and if this is kept up sufficiently long, we are sent to the hospital and our business is turned over to our creditors.

¶ If we become excited and angry over the little affairs of the day, get into heated discussions and arguments on politics and religion, tell those who are attempting to assist us that we are not feeling well, then we are preparing for the 'toboggan slide.' If we are to become a power, if we are to dominate, if we are to really hold the reins, to take possession or to take advantage of conditions, then it is necessary for us to store up power, and power, mind you, is not stored up by discussing trivial affairs, by rehearsing disappointments and attending funerals.

¶ The world has had enough of the grouch. The trouble with business, and practically the only trouble with business to-day, is a lot of old-fashioned, old-fogy, out-worn notions which should have been discarded about fifty years ago—or, better still, which should have been lost on the morning the stars were set in the sky. There are just enough of these people in business to-day who start an occasional panic and create a feeling of uncertainty and uneasiness in the business field which gives the entire machinery of things a setback, from which it requires a year to recover.



¶ The principal things that each individual should cultivate more and more are kindness, the work habit, and, above all things else, **the Health Habit.** And just remember this one thing, nothing is so very bad after all. It all depends on the way we see it. If we are to insist on being miserable ourselves, let us retire to the hills and live in a cave or in the crater of an extinct volcano, or let us go where we will not come in contact with other people, where we will not be a burden to those who desire to be happy, to those who desire to do useful work. No man can conduct an intelligent conversation with 'a toothache.' No man can write clearly, lucidly and entertainingly on any subject after he has overeaten, oversmoked or overdrank.

¶ Once more, remember the Moral—we need to cultivate kindness, courtesy and temperance in all things, even if we believe in 'prohibition in none'; and remember also a good place for courtesy and kindness is in your business and among your business associates, as these assets can be and are used for business purposes.

THE "CANNON OILER"

FORCES THE OIL ANYWHERE

Combines Convenience, Quickness and Economy.

Will bring you much new business

The Cannon Oiler meets a long-felt demand for an oil can in which oil is entirely controlled by the operator in whatever position the can may be held. **It is quick, because** you do not have to wait for the oil to slowly trickle out, as it is forced out by simply pressing on the plunger.

Convenient because the can may be held in an easy, natural position, thereby enabling the operator to hold the nozzle in the proper place for oiling the bearing.

Economical, because not a drop of oil need be wasted, as the flow of oil ceases the instant the pressure on the plunger stops.

Boost it now. One sale will result in many others.

R. E. Bloomer

Keithsburg, Illinois

THE AYLMER STOCK AND TOWN PUMP

Extra Heavy Set-Length. Reversible Spout. Six-Inch Stroke

This pump is designed to meet a demand for use with cylinders of large capacity.

In wells not over twenty feet it has an easy capacity of over a barrel a minute when fitted with 5 or 6-inch cylinders. When used in tubular wells, the buckets can be withdrawn through the top, same as illustrated by Fig. 41, Page 34, of our catalogue Number 14, and for stock, town or factory purposes we cannot recommend it too highly.

Something New in Oil Stoves

Many important improvements will make this year's model of the

New Perfection
WICK BLUE FLAME
Oil Cook-stove

THE IMPERIAL OIL COMPANY LTD
HEAT LIGHT POWER LUBRICATION
LIMITED

appeal strongly to every housewife.

The New Perfection No. 5 is so novel and attractive in appearance that it will add prestige to every store that sells it.

It is remarkable enough in performance to bring a steady stream of orders.

It has the new Fireless Cooking Oven, which roasts or bakes by slow, fast or fireless cooking methods.

The new oven is asbestos packed, so that only one burner is needed to heat it—saves just half the fuel cost.

It has a disappearing oil tank that is a model of convenience and cleanliness.

New Perfection Stoves are also made in 1, 2, 3 and 4-burner sizes without fireless cooker. They are solidly built throughout and beautifully finished with blue enamel chimneys, and blue enamel oven door.

Stock early and land the early crop of buyers.

ARE YOU THE MAN AT THE HELM?

Are you running your ship of business along the shortest and safest course to the harbor of success? Or are you going a roundabout way, scratching and scraping along the rocks of loss and failure.

Get in the right course, be on the lookout for new thoughts, ideas, schemes, etc., and you will have a successful run.

STORE MANAGEMENT COMPLETE

is a guide that will show you how to get the maximum trade and profit out of your busines. This book is written by Frank Farrington (a companion book to "Retail Advertising Complete.") It tells all about the management of a store. The following is a synopsis of one of the chapters:

CHAPTER V.—THE STORE POLICY—What it should be to hold trade. The money-back plan. Taking back goods. Meeting cut rates. Selling remnants. Delivery goods. Substitution. Handling telephone calls. Courtesy. Rebating railroad fare. Courtesy to customers.

"Store Management—Complete" is bound in cloth, contains 272 pages, 16 full-page illustrations, and 13 chapters. $1.00 brings this book to you postpaid. Money refunded within 10 days if not satisfactory.

With an Easy Path to the Home

YES, and right into the best homes, too—Lowe Bros.' High Standard Paint will make a worthy advance guard for that big Spring business you are looking forward to. Our national advertising in magazines and farm papers will take the High Standard Paint facts into thousands of the best Canadian homes. Add to this our intensive local advertising. Join that to a line of paints that knows no equal for quality—absolutely. Cover the whole with the blanket of Lowe Bros.' splendid, whole-hearted co-operation with our dealers and you have a combination that gives you an "easy path to the Home," indeed!

Lowe Brothers LIMITED

HIGH STANDARD PAINTS

have unusual covering power and notable spreading capacity. They have a remarkably long life. They are beautiful to the eye. Like the Lowe Bros.' proposition to the dealer, High Standard Paints are not merely "good," or "pretty fine," but absolutely the best in the market. We know.

To-day is the day to write us.

Why YOU Should Handle GLIDDEN "Green Label" VARNISHES

STOP a moment and THINK what it means to handle goods which need no expert salesmanship to keep moving.

Think of Household Varnish! What is the first thing that comes to your mind? Ten to one it is "JAP-A-LAC"! Why? Simply because the name "JAP-A-LAC" has come to be a household word everywhere.

Think of Piano Varnish! Perhaps you don't know, but it's a fact that more than 50% of the Piano Output of America is finished with varnish made by GLIDDEN.

Glidden products sell themselves. When a woman wants varnish she asks for "JAP-A-LAC"—when a painter and decorator wants varnish he asks for "GLIDDEN'S," and that means Glidden's "GREEN LABEL."

Every sale of "Green Label" nets you a substantial profit, because it invariably means a quantity order. Get that!
Glidden's "GREEN LABEL" Varnishes are standard, uniform, dependable—always.

We have a mighty interesting money-making proposition to offer you in connection with Glidden's GREEN LABEL Varnishes, White Enamels, Endurance (Mission) Wood Stains, Waterproof Flat Wall Finishes, Cement Coatings, and the world-famous JAP-A-LAC.

WRITE TO-DAY FOR FULL PARTICULARS

THE
GLIDDEN VARNISH COMPANY, LIMITED

Remington-UMC

EIGHTY thousand dealers in the United States and Canada are featuring Remington-UMC Rifles and Shotguns, with full stocks of Remington-UMC Shot Shells and Metallics—and displaying the Red Ball Mark of Remington-UMC, the Sign of Sportsmen's Headquarters in every town.

Remington Arms-Union Metallic Cartridge Co.

Windsor Ontario

Starrett Hack Saws

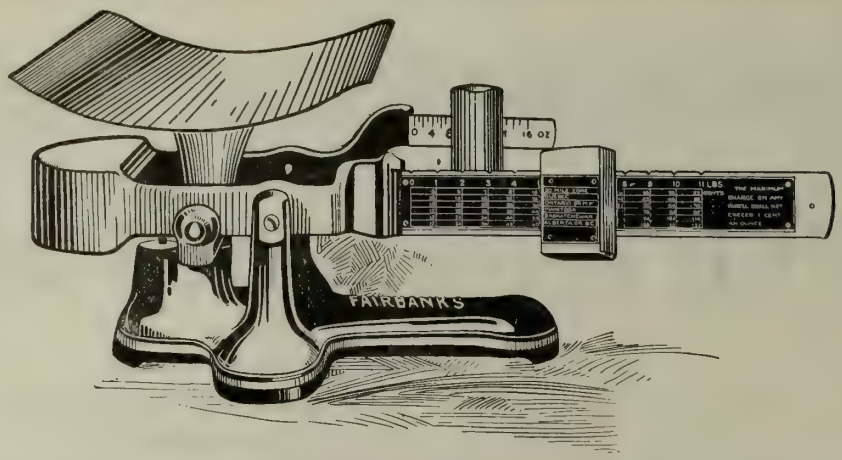
There is more money in a good line of hack saws than most hardware dealers realize.

Hack saws must be used by nearly every mechanic, while machine shops and factories dispose of a tremendous quantity.

The cost of these saws is not a small item and when any dealer can demonstrate that his line of hack saws will cut faster and last longer than those being used, he can rest assured of a steady trade.

Now the dealer who handles Starrett hack saws has a double advantage—he has the name Starrett to secure the first trial because everyone knows Starrett tools are the "Standard Instruments of Precision," and further he has the actual quality in the saws. So he can have the saws tried on the strength of their name and then they will make good on the service they give.

Starrett hack saws are made of special tungsten steel. The teeth are milled instead of stamped and the set is perfect for each kind of work. There are good sales waiting if you will just push Starrett hack saws.



Let us send you a copy of our big, new, free catalog No. 20MA which tells what saws to use for each kind of cutting.

"Health, Kindness and Courtesy"

¶ Everything in this world is largely attitude of mind. No day is beautiful to the man who has indigestion or who has spent the night before at a 'smoker.'

¶ If we radiate good health and good cheer we will get these things back in return. Good humor, courtesy and kindness, pay splendid dividends—and a good long while ago someone said: "As ye sow, so shall ye also reap." This is a fact in Nature, and while we are not indebted to any book or particular individual for this fact, it is, however, a truth which we oftentimes overlook.

¶ A grouch begets a grouch. If a man thinks failure, talks failure, contemplates failure, fears failure, then, verily, failure is on the wing and the spiders are weaving their webs over the door of this man's success. These things constitute what is known as personality, and personality is experience and observation put through a refining process. People with splendid and magnetic personalities have little to say about headaches, indigestion, tonsilitis and appendicitis, because these do not constitute personal magnetism.

¶ The generally accepted theory among intelligent folks nowadays is that a large per cent. of sickness is the result of a large per cent. of foolishness—and people not being anxious to advertise the fact that they have been foolish, silly or indiscreet, say very little about their aches and ills.

¶ If a man sets out in life to accomplish certain things and is willing to sacrifice enough to accomplish his particular purpose, there is hardly any probability that his ambitions will be defeated—unless he should come in contact with a street car or a benzine buggy—and so it is a fact that **we get back just about what we give.**

¶ If we assume an attitude of grief and despair, and carry our troubles, domestic or otherwise, to the office, tell our co-workers about our sleepless night, tell our troubles and ailments to our friends, discuss the latest death with our customers, rehearse the sickness of the community, then we naturally put a clog in the affairs of the day; in other words, we have cut off the power and our business gets indigestion, and if this is kept up sufficiently long, we are sent to the hospital and our business is turned over to our creditors.

¶ If we become excited and angry over the little affairs of the day, get into heated discussions and arguments on politics and religion, tell those who are attempting to assist us that we are not feeling well, then we are preparing for the 'toboggan slide.' If we are to become a power, if we are to dominate, if we are to really hold the reins, to take possession or to take advantage of conditions, then it is necessary for us to store up power, and power, mind you, is not stored up by discussing trivial affairs, by rehearsing disappointments and attending funerals.

¶ The world has had enough of the grouch. The trouble with business, and practically the only trouble with business to-day, is a lot of old-fashioned, old-fogy, out-worn notions which should have been discarded about fifty years ago—or, better still, which should have been lost on the morning the stars were set in the sky. There are just enough of these people in business to-day who start an occasional panic and create a feeling of uncertainty and uneasiness in the business field which gives the entire machinery of things a setback, from which it requires a year to recover.

¶ The principal things that each individual should cultivate more and more are kindness, the work habit, and, above all things else, **the Health Habit.** And just remember this one thing, nothing is so very bad after all. It all depends on the way we see it. If we are to insist on being miserable ourselves, let us retire to the hills and live in a cave or in the crater of an extinct volcano, or let us go where we will not come in contact with other people, where we will not be a burden to those who desire to be happy, to those who desire to do useful work. No man can conduct an intelligent conversation with 'a toothache.' No man can write clearly, lucidly and entertainingly on any subject after he has overeaten, oversmoked or overdrank.

¶ Once more, remember the Moral—we need to cultivate kindness, courtesy and temperance in all things, even if we believe in 'prohibition in none'; and remember also a good place for courtesy and kindness is in your business and among your business associates, as these assets can be and are used for business purposes.

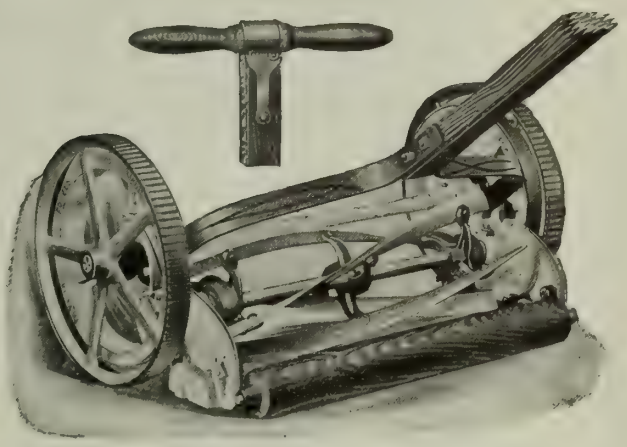
Taylor-Forbes Lawn Mowers mean satisfied customers

None but the highest grade of workmanship and quality of material used. Quality, finish and mechanical features have never been equalled.

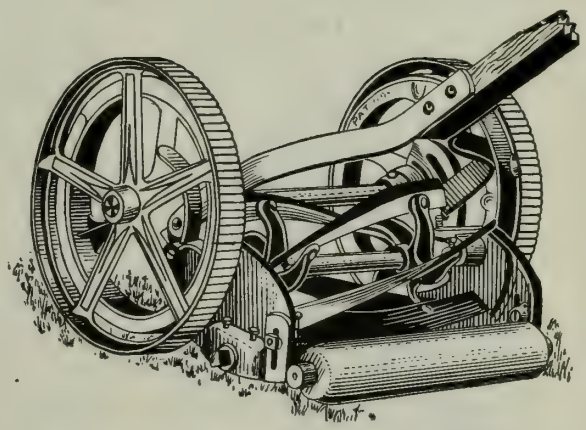
Taylor-Forbes mowers have **stood the test for forty years**—they have given satisfaction everywhere.



One sale always results in others, because users do not hesitate to recommend them to their friends and neighbors.

UNCONDITIONALLY GUARANTEED

If for any reason, at any time within one year from date of purchase, the purchaser of a Taylor-Forbes Lawn Mower is not satisfied with this purchase we **insist** on giving him a new machine or refunding his money.



Our line includes **Empress, Woodyatt, Star, Philadelphia, Adanac, Ontario, Mayflower and Daisy.**

Be sure to have good stock of these reliable and very profitable mowers. **We'll send you our 1914 catalog upon receipt of your request. Write!**

"Empress" Lawn Mower

Open four-knife cylinder. 10½-inch wheels. Special tool steel knives, oil tempered. Case-hardened adjustable bearings. Case-hardened ball-bearings and balls. Specially prepared polished steel shafts. Cheeks easily detached. Made with grass box attachment.

"Woodyatt" Lawn Mower

Open four-knife cylinder. Tool steel knives, oil tempered. Bearings are extra long and adjustable. Best quality material used throughout its construction. Made with grass box attachment. This mower has been on the market longer than any other high-grade mower in the world.

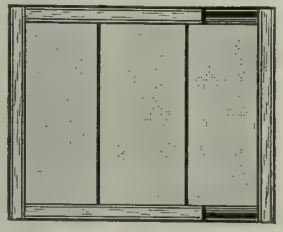
Strong, Well Made and Attractive



We use only carefully-selected, well-seasoned, dry pine.

Frames are held rigid by well-glued dowels. Stiles and top rail from 4 in. and bottom rail from 6 in. stock, finished 7/8 in. thick. Only the best grade of black wire cloth is used.

All doors are turned out of the Woodworking Department by special up-to-date machines, resulting in a fine, smooth surface, ready for our weather exposure fillers and varnishes. Inspection and packing are given the careful attention required.

Sanderson-Harold Extension Window Screens

Made of Beech Lumber, Mortised Frames, Glued and Nailed, Guaranteed Superior Quality.

Drop us a card for booklet. It shows the different styles and gives full details.

If you have not placed your order for **Refrigerators**, do not do so until you find out about the Sanderson-Harold—it's a good one, and very profitable, too. We'll be pleased to send particulars.

NICHOLSON MADE

Don't Forget Your NICHOLSON-MADE MOWER FILE STOCK!

Soon your farm friends will want Mower Files. From past experience you know that when they DO want them, they'll want them mighty quick.

While we're noted for extra quick deliveries, yet in your own interests we urge you to place your orders NOW.

All indications point to bumper crops this year. Mowers will see more than usual service —knives will need more frequent re-sharpening — extra quantities of Mower Files will be used.

As usual, 90% of the demand will be for the famous

Nicholson-Made MOWER FILES

NICHOLSON File Company

PORT HOPE, ONTARIO

Every progressive jobber carries NICHOLSON-Made-FILES in stock.

A Return To Ancient Virtues

Nearly every one has heard the virtues of "Old Time Irons" praised, and the fact that we do not have as efficient material now bewailed. The durability of "Old Time Iron" made it a very economical material.

It may be a surprise to know that a modern product made by scientific, rather than haphazard methods, possesses not only all the excellent properties of old-time iron, but others in addition.

TONCAN METAL —The Efficient Sheet Metal

In the manufacture of Toncan Metal we reach the acme of practical efficiency, resulting from the wisdom obtained from long experience, coupled with scientific knowledge. We furnish a ferrous metal in sheet form, and with all the virtues of the ancient products, plus the strength, ductility and general workability of modern sheets, and at a price within the reach of all who are willing to pay a small advance over the price of ordinary Steel Sheets. Durability in Sheet Metal is the great desideratum.

Corrosion, or the rapid destruction of an iron or steel product, may be reduced and its action prevented by proper and scientific methods of manufacture.
According to the well-established theory of chemical electrolysis, corrosion is due to an electrolytic action taking place between the groups of impurities scattered through the metal.
Toncan Metal has an almost infinitesimal fractional percentage of metallic impurities, and this small percentage of impurities is thoroughly and uniformly diffused throughout the whole sheet.
This is **one** of the reasons why Toncan Metal is corrosion-resisting.

WRITE TO NEAREST ADDRESS FOR "THE TEXT-BOOK ON CORROSION"—IT'S FREE.

Toncan Metal is made up into all forms of Roofing, Siding, Conductor Pipe, Eaves Trough, etc., besides the flat sheets, and is carried in stock by

The Pedlar People, Ltd., Oshawa, Montreal, Toronto, Winnipeg
General Distributers for Canada.
The Stark Rolling Mill Co., Canton, Ohio, - Sole Manufacturers

Steel and Concrete!

The combination of tension resisting steel, with fire, time and compression resisting concrete, has given man a new material—an alloy, as it were, with the advantages of both and the disadvantages of neither. And man, ever progressive, has not been slow to appreciate this gift—has not been tardy in utilizing this great discovery.

A walk around your town, will convince you of the enormous use there is for concrete; and therefore of the opportunities for big business in

Rogers' Portland Cement

because a few careful enquiries will prove to you, that Rogers' is the favorite of engineers and architects—that **Rogers' Cement is Standard.**

And our dealer co-operation plan enables you to get in on a share of this big business—to get some of the fine profits that the invention of ferro-concrete has made possible.

Briefly:—We want you to become our authorized dealer to go after the small contractors in your locality, to get his cement orders, that's all!

We don't want you to carry a big stock of cement, because we stand right back of you, ready to ship promptly as you tell us to.

This sounds a good proposition, doesn't it?

"You bet," you say. Well, write us then!

ALFRED ROGERS LIMITED, 28 West King Street, Toronto

MORRISON J. M. T. VALVES

J. M. T. Valves represent more than a means of merely closing a pipe-line. They are designed to fulfill every service a good valve should render. They have full pipe opening through the valve, offering a minimum resistance to flow. Built with extra heavy and rigid body enabling them to withstand strains due to expansion and contraction of the piping. Fitted with renewable "radium" or copper discs and a lock-nut device which permits the easy removal of old discs. They are made only of high-grade steam metal, carefully cast and machined to have all parts interchangeable. Each valve is subjected to a severe test before leaving our factory. **We make a J. M. T. valve or cock, in brass or iron, for every purpose.**

J.M.T. Every valve is stamped with our trade-mark, which is its guarantee of quality.

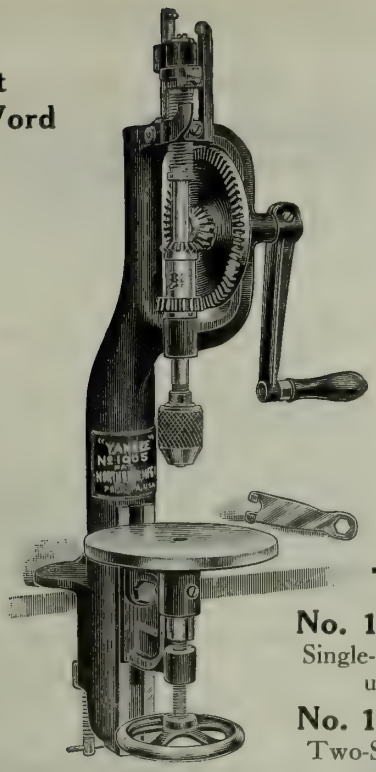
LUNDY SHOVELS

It isn't just by chance,

that Lundy Shovels have become a standard wherever shovels are used in Canada.

No, Sir! There's more back of it than that—it's their many points of superiority that have earned for them their enviable place. For instance—

The strap and blade point are made of crucible steel, and are extra strong, thus ensuring long service and durability, from those parts that usually give out first.



This is only one "Lundy" advantage. To fully appreciate their value as business-getters, you must handle them.

They'll be found at your jobber's, most probably; but if he hasn't got them write to us direct.

TACKLING THE PAINT MAN

He will be dropping in pretty frequently, just now, because the season for painting up has arrived.

So that, **you** will get a splendid opportunity to tell him about the advantages of Meakins' Brushes.

He'll be interested—his last year's brushes are lost or spoiled, and he's going to buy new ones somewhere.

You can tell him that Meakins' Brushes are as dependable as his favorite brand of paint. And you can rest assured that he'll find this to be true; the Meakins guarantee vouches for it

He will be a very satisfied Paint Man when he gets through; and will point, with pride, to his handiwork—unmarred by a single shed bristle. You will be a very satisfied dealer when he boosts you around the town as: "the man who sells **everything** reliable."

It's not a dream; it will come true, if you write and let us tell you how profitable is getting Sales-Satisfaction—the Meakins Way.

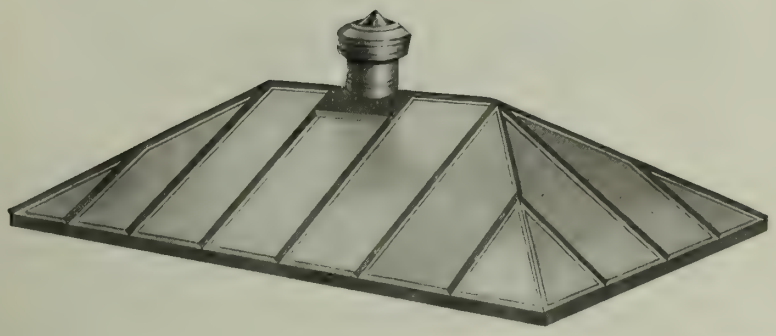
A salesman that never gets tired——

who will stand outside your store all day and never get cold—whose voice will not grow hoarse—and who asks no commissions on the goods he sells for you.

How about engaging him?

His name is "**the Sell-More Rack.**" He stands 30 inches high and the piece of the sidewalk that he occupies measures 35 x 17 inches. He hugs the front of your store so closely that he never contravenes the most stringent city ordinances; he is painted a fine attractive carmine red; and he is built so strongly that he will carry all you can load on him. He runs easily on substantial castors; his large flat platform is very useful for displaying small articles; and his weight crated is 35 lbs.



The only salary he asks is $4.50 f.o.b. Canton, when you first engage him. Most reputable jobbers stock him; but if yours hasn't got him he may always be found at his maker's.

Use a Barr Account Register

Save labor—time—money!

SPECIAL NOTICE.

The Barr Register is a bona fide Canadian invention fully protected by valid patents. There never have been any legal proceedings against above patents notwithstanding all competitors' talk to the contrary.

We make this announcement as we understand that some merchants have been imposed upon and induced to buy other account registers through such talk.

Signed, BARR REGISTERS, LIMITED.

¶ Push your credit sales, you are entitled to the money and the advantages you may reap from ready cash! Do it the "Barr" way and your customers will appreciate it.

¶ If you have set a limit of credit for your customer provide a full statement of account with each purchase; give your customer an opportunity to pay when convenient.

¶ The Barr Account Register System, **at one writing,** makes out purchase slips and completes all your book-keeping. Saves time and labor, stops the "leaks," and gets your money in—does it in a way that makes your customer feel you are giving the best service.

¶ Made in either counter cabinet or floor cabinet style to handle any number of accounts, the Barr Account Register will solve your credit account problems. You know the need—we are ready to tell you all about the register. **Write to-day!**

Let us tell you the reason,

that you should stock up with the Dana Peerless Freezer, **right now.**

The Peerless makes its greatest appeal in Summer. Although it's in demand all the year round—naturally, in the sultry months, the demand is greatest.

And the Peerless appeals irresistibly to those people—the Summer campers, the commuters who go to live, far from the stores, where good ice-cream is procurable.

If you have it in stock, good and early, you'll be able to show it to them before they go,—you'll have time to demonstrate it—to point out the tall, slender can—to show them how the dasher removes the cream from the sides as fast as it becomes solid. You will be able to let them crank it themselves, to let them discover that it is as easy to grind as a watch is to wind.

That's the reason you should stock the Dana Peerless **now.**

A mighty good reason, isn't it?

You'll think so, when we tell you about the profits.

So ask your wholesale hardware supply house about them now.

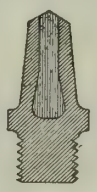
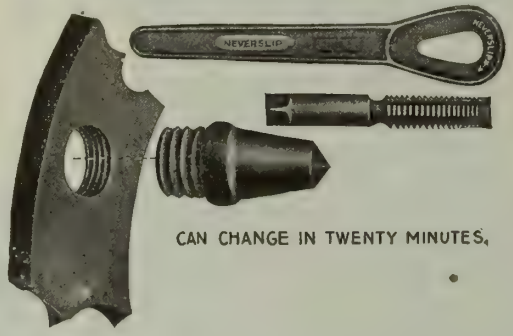
Red Tip CALKS



Let us tell you some of the reasons why RED TIP CALKS are rapid sellers and bring profit to the dealer.

MATERIAL—RED TIP CALKS are primarily a safety device and therefore there is no choice between them and cheap, unworthy substitutes. *Safety demands the best.* They are made by skilled labor, of the highest grade material, carefully analyzed and tested by schleroscope and are rigidly inspected before leaving the factory.



TEMPER—RED TIP CALKS are tempered exactly. There is no guesswork about it. The heat being regulated by electric pyrometers is even, and the last calks in the lot have the same temper as the first. Every box of 50 contains 50 *good* calks. Horse owners know this.

EFFICIENCY — RED TIP CALKS are made as here shown with a pin of high-carbon steel inserted in an outer shell of softer metal. Time has shown that this is the only way to make a calk.

LABOR AND TIME SAVERS—RED TIP CALKS when worn down can be removed and a new set inserted in 20 minutes by the aid of a simple wrench, thus eliminating long waits at the Blacksmith Shop.

COST—RED TIP CALKS cost far less than the old-fashioned way of sharpening, besides putting the user in readiness to travel at all times.

PROFIT—RED TIP CALKS pay a large profit to the dealer. They are quick, easy sellers, being widely advertised and as widely esteemed.

GUARANTEE—RED TIP CALKS are guaranteed to be as represented. They are guaranteed to wear sharper and last longer than others. They are guaranteed to be perfect in thread and temper. We market no seconds under any brand.

Genuine Neverslip Calks have Red Tips. Beware of Imitations.

THE "EMPIRE" SAP SPOUT

STRONGLY MADE OF MALLEABLE IRON, TINN AND DURABLE ENOUGH TO LAST THROUGH A GENERATION.

EVERY SPOUT GUARANTEED AGAINST BREAKAGE

THEY WILL RUN SAP EARLY AND LATE with a capacity fully one-third more than any other make.

THE TAPERED END GIVES THIS SPOUT A FIRM HOLD of the tree and the play of the wind on a full bucket of Sap cannot possibly loosen the spout after it has once been driven in.

IT DOES NOT LEAK, and is very easy to insert and just as easy to remove.

USE 7-16-INCH BIT WHEN TAPPING, and it will be found that with the **"EMPIRE" SPOUT** every severed grain of wood within the hole is left perfectly free to run Sap—and the increased amount thus obtained will pay for the Spouts in less than one Season.

NO ROSSING OF THE TREES NECESSARY and therefore no injury to the bark.

BEAR IN MIND DURING THE BUSY BUILDING SEASON

That the best Furnace value can only be secured from experienced manufacturers.
That a reputation for quality is only gained by selling Quality goods.
That to the builder or architect who is seeking the best Furnace of quality reputation

McClary's
SUNSHINE FURNACE

will instantly appeal

BECAUSE

The Dome and Radiator is now being made of American Ingot Iron, 99.84% purity. This iron has never been known to wear away, a feature of incalculable value when talking Sunshine durability and strength.

The Water Pan is just where it should be, above the radiator, near the dome, where the heat absorbs just the necessary amount of moisture to humidify the air.

The Grates are heavy, strong and durable, and have three sides, which gives them three times the endurance of one-sided grates.

There is no dust nuisance — the dust flue carries all the dust up the smoke-pipe.

The Firepot is made of McClary's famous semi-steel and is in two pieces—absolutely gas, smoke and dust-proof.

The large feed doors make firing easy.

There are many other features, too.

Write our nearest Branch for advertising literature—it will help you to make sales.

Quality is the Keystone of all Enterprise Products.

The only effective business is that run on a "QUALITY GOODS" BASIS.

Quality sells the goods and price is not a determining factor, unless quality is considered.

THE ENTERPRISE BLAZER

is a hot air furnace of the very **highest quality,** in the true sense of the word.

There's both profit and satisfaction in pushing the Blazer, because the minute you begin to talk to your customer you break him away from all thought of putting up with a cheap, skimpy, short-lived and wasteful furnace. Your sale comes easily because you are armed not only with strong claims, but still stronger proofs, and the help that we can give you will make it very much easier to make sales.

Made in four sizes.
With fire pots, 18", 20", 23", 26" diameter.

The Blazer is a very powerful heater. It burns little fuel and is wonderfully durable. It's also particularly easy for you to case and instal and much time and money can be saved in that way.

Perhaps its most prominent feature is the Patented Fire Pot.

PATENT FLANGE

GREAT WEIGHT

This fire pot weighs from 135 to 375 lbs.—the heaviest in any furnace. It's made in two sections and the upper section has a flange cast on. This flange projects up into the steel radiator, and protects the steel just where most furnaces burn out.

There is a great deal more in this furnace proposition than we are able to show you in this ad. It will be well worth your while to find out more about it. An inquiry from you will put you under no obligation whatever. Write to-day.

Progress in Hardware Store Improvements

Canadian Retail Hardware Stores Have a High Standing—Many Exceptionally Fine Stores Are Located in the Smaller Towns and Cities—Descriptions of Two Retail Stores.

THAT Canadian retail hardware merchants appreciate the value of spacious and well arranged hardware stores is clearly evidenced by the large number of exceptionally fine stores which are described and illustrated in Hardware and Metal from time to time. Particularly during the past few years have new and handsome stores been erected or old ones remodelled.

It is safe to say that during the past twenty-five years more progress has been made by hardware merchants in the matter of store improvements, than in any other line of retail merchandising.

This is an age of progress and retail hardwaremen—at least a good many of them—are keeping right in step with progress. The progressive merchant realizes the necessity of up-to-date premises in which to do business, and he is not satisfied until his store ranks among the top-notchers.

In the accompanying illustrations are shown interior views of two retail hardware stores located at opposite sections of Canada. One store is located at Amherst, N.S., and the other at Grand Forks, B.C. It will thus be seen that the attractive stores are not all located in the large cities.

There is one thing of which Canadian hardwaremen should be proud, and that is the exceedingly high, average standard of the retail hardware stores located in the small towns and cities in this country. There are hundreds of hardware stores, located in towns of from three to eight thousand population, that would be very creditable stores for many of our larger cities. Travellers from other countries who have had occasion to visit some of the small towns of the Dominion have often been heard to remark on the hardware stores located in the smaller places. One of the accompanying illustrations shows an interior view of the retail hardware store of Douglass & Co., Amherst, N.S. This store is a model in many respects. It is neat and compact. The goods are exceedingly well displayed and there is plenty of room for customers to move around and examine the stock.

The cutlery department is located near the front of the store and two silent salesmen are used for displaying cutlery,

Interior view of Douglass & Co. store at Amherst, N.S.

silverware, etc. The tool department is loacted on the left side of the store. Shelf boxes are used and samples are shown on the ends of the boxes. A number of open shelves have been constructed above the shelf boxes, to hold surplus stock. Salesmen have access to the top shelves by means of a store ladder which runs on an overhead track.

The office, from which a general view of the store can be had, is located at the rear.

The paint department occupies a very prominent position on the right side about half way down the store.

Immediately following the paint department is the harvest and garden tool department, where tools are shown on specially constructed racks.

Paint brushes are neatly displayed in a wall display case. The ceilings of the store have been nicely decorated.

Great care has been taken in arranging the samples in the shelf boxes and this feature adds greatly to the appearance of the store. The town of Amherst has a population of about 9,000.

The store of W. K. C. Manly is located at Grand Forks, B.C., a town of about 2,500 population. This store is in an entirely different section of the country, being several thousand miles west of the Douglass store.

In this store, which is a very roomy one, is a large assortment of merchandise, including general hardware, stoves, refrigerators, buggies, wheel hoes, horse collars, etc. The metallic ceiling is a commendable feature and adds greatly to the appearance of the store interior. The store is equipped with sliding ladders. The office is elevated, and is located at the rear of the store. This firm carries a large assortment of household goods as well as a large range of merchandise in which the farmers are particularly interested.

LABELS ON BINDER TWINE.

An Act to amend The Inspection and Sales Act.

HIS MAJESTY, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. The Inspection and Sale Act, chap-85 of the Revised Statutes of Canada, 1906, is amended by repealing section 347 and substituting the following therefor:—

"347. Upon or attached to every ball of binder twine sold or offered for sale in Canada there shall be a label with the name of the dealer and the number of feet of twine per pound in the ball marked or stamped thereon.

"2. Binder twine manufactured for export only and not to be used in Canada need not be so labeled. The onus of proof that any unlabeled binder twine is manufactured for export only shall rest upon the manufacturer, dealer, carrier or other person in whose possession the binder twine is found.

"3. The Minister of Trade and Commerce for the time being may make such regulations as he deems necessary to prevent the sale or use in Canada of unlabeled binder twine manufactured for export only and any person violating any such regulation shall be liable upon summary conviction to a penalty not exceeding fifty dollars, and for each subsequent offense to a penalty not exceeding one hundred dollars."

A PECULIAR IDEA.

There are some merchants who have peculiar ideas as to what constitutes advertising. Recently a hardware dealer in Columbus, O., caught a number of rats alive and placed them in his shop window. It was then announced that the rodents would be liberated at a certain time and a pocket knife would be given to every youngster who succeeded in killing one of them. Naturally a crowd collected and the rat-killing was pulled off according to schedule. It wound up in a successful dog fight.

Western Merchants on Trail of the Dead Beat

Some Lively Discussion at Big Moose Jaw Convention on This Important Subject—Banking, Another Problem Dealt With

Moose Jaw, Sask., March 25.—Some four hundred delegates from all parts of the province are in attendance here at the annual convention of the Retail Merchants' Association, Saskatchewan Branch. Up to last night the discussion was lively. Particularly so has this been the case on the paper read by W. F. L. Edwards on the subject of Credits. This is one of the livest questions in the West, and the merchants during the last couple of years are working more determinedly to eliminate the vast losses caused by people who will not pay their bills.

J. L. S. Hutchinson, of Saskatoon, spoke on banking, collateral security, etc.

Invitations for next year's convention came from Swift Current and Saskatoon, and considerable discussion took place on this. At time of writing this question had not been settled, but a full report will be forwarded for next week's issue.

Work of the Past Year.

The Saskatchewan branch of the Retail Merchants' Association was organized a year ago at a large convention in Regina, Sask., with F. J. Bole, Regina Trading Co., as president. Other officers elected were: T. J. Agnew, of Agnews, Ltd., Prince Albert, as first vice; W. W. Cooper, of Cooper & Co., Swift Current, as second vice, and J. L. S. Hutchinson, of the Saskatoon Hardware Co., as treasurer. F. E. Raymond, of Saskatoon, was made provincial secretary.

During recent months the association had two organizers in the Province, one of whom, J. M. Brayley, took up the work in August last, but as it would have taken a great deal of time to cover the Province with only the one organizer, it was decided to place another on the field. R. M. Jewell was therefore engaged in November last, and as a result, there are in Saskatchewan alone over 1,400 members and the organizers have been adding to these at the rate of from thirty to forty every week.

The way the organizers have been working has been to call a meeting at the largest of several towns in easy reach of each other and appoint officers to form a local branch. The merchants then in the towns which come under that local branch, turn in lists of their customers, with their ratings on each to the local secretary, who, in turn compiles a list of all the names he has with the rating on each, and hands a copy of that list to all members. In this way it is possible to keep track of those parties who live within reach of several towns or villages, and who exhaust their credit in one place and then go and repeat the performance elsewhere.

In addition to this there is the credit reporting department which is situated at the provincial head office in Saskatoon. This department issues collection letters to all the members who apply to them. These letters are in two portions and the member fills in the stub giving all the particulars as called for, and sends the other part to his debtor. In many cases the first letter is sufficient to bring in the money or at least to have arrangements made for payment, but where this is not done the stub is turned in to the Saskatoon office and a second letter is issued from there. This second letter gives the debtor fifteen days to arrange settlement, and if at the expiration of that time no adjustment has been made, the debtor's name is reported to Toronto, for publication on the list of delinquent debtors, a copy of which list will, in due course be placed in the hands of every member in that Province.

Since the first of November last up to the 15th of February, there have been reported to the officials as being paid through the results of the collection letters issued by the Credit Reporting Department no less than 411 accounts representing a total amount of $15,968 and during the same time there have been reported to Toronto for publication on the list of delinquent debtors some 1,470 names representing a total amount outstanding to the members of $64,114.

Much Outstanding Money.

These figures are just three months' work of the credit reporting department, and from less than 20 per cent. of the present members of the association. If every member had sent in his collection letters' stubs, these figures would at a low estimate have been trebled. Even then that would only have represented less than 15 per cent. of the merchants in the Province. With these figures to work upon, it does not need a great deal of reasoning to realize the money which must be outstanding on the books of Saskatchewan's merchants. The genus "dead-beat" is evidently abroad in the land all the time and in ever increasing numbers.

Through the efforts of the association the first piece of legislation ever obtained by the merchants of Saskatchewan as a body came into force on the 15th of February last. This was the Small Debts Act and while this is claimed to be a great improvement over pre-existing conditions, it was hardly what we wanted. Still it is recognized as a start.

At the next sitting of the Provincial House there will be several matters brought up such as Continuous Garnishee, Unfair Advertising, etc., etc.

Saskatoon has alone a membership of 105, and has a rating system whereby any member who is approached for credit, has just to telephone to the office of the association, and if the particular party is not rated, within a very short time the applying member can be assured that he will receive authentic information to guide him in his judgment as to granting the credit or not.

The Saskatoon branch at the present time has several matters before the city council such as licensing transient traders and improving the city market, and is taking up the question of free telephone service to nearby towns, rural free mail delivery, and numerous other items of interest to the local retail merchant.

F. J. BOLE, REGINA, SASK.
Who Presided at the Big Convention in Moose Jaw.

HARDWARE AND METAL

VOL. XXVI. No. 13 Toronto, Canada, March 28, 1914 Two Dollars per Year

Our Annual Spring Number

HARDWARE AND METAL feels a justifiable pride in the special number issued last week. For the past twenty-five years, a special has been issued at this season with the object of assisting the merchant in his spring campaign. Each year has seen a healthy growth in the spring special, denoting a growing appreciation of its value. But with the present year, the rate of growth was very decidedly accelerated and the number broke all previous records in remarkable style. It was, in fact, the largest issue of a trade, technical or class publication ever published in Canada.

That readers have appreciated the splendid number compiled for their use is evidenced by the opinions which are pouring in with each mail. One man writes: "I almost thought, at first, that a bound-up edition of Hardware and Metal for some time back had been sent to me." From many sources have come words of appreciation of the editorial and the advertising contents.

It will be the aim of the staff of Hardware and Metal to keep the paper throughout the year up to the high standard set in our special number. Arrangements are being completed for new series of articles of direct practical value, and in every way the editors are striving to bring their work closer to the needs of the retail hardware trade.

Courtesy in Business

TRUE courtesy is part of a man's character. Some men wrongly think it is something to be made use of on occasions and discarded when not absolutely necessary; for instance, the business man who has an entirely different manner for the buyer of goods to that which he displays when the positions are reversed and he himself is the prospective purchaser. Sometimes one would scarcely recognize him as the same individual. In the one case—suave, affable, obliging, considerate—radiating courtesy and good nature throughout the entire transaction. In the other case—blunt, gruff, ill-tempered, ungentlemanly—giving one the idea of a bear with a sore head. Yes, we know we have pictured an extreme case—a sort of Dr. Jekyll and Mr. Hyde personality in business—but we know, too, that there are a great many business men to whom the dual picture applies, if not in degree, at least in principle. Just why this should be is hard to understand. The generally accepted, twentieth century, definition of a contract or bargain is one which is mutually beneficial to all parties to it. If, then, the retailer is a beneficiary of the commercial traveler and of the house he represents, as indeed he is, why does he not treat them with the same degree of courtesy as he gives to the purchaser of his goods? Simply because of an antiquated and entirely wrong impression of his position in both transactions. If he is honest—and all truly modern business is honest—he is, in both cases, one of the parties to a mutually satisfactory and profitable transaction, and there is no reason why that brilliant jewel of character which we call courtesy should be made use of in the one instance and not in the other.

The same principle applies with equal force to a transaction between an employer and an employee. The discourteous manner, the hasty judgment, the neglect to reply promptly to a courteous application for employment—these are not only unprofitable and unbusinesslike, but are certain to be reflected in your employees also. Ofttimes we regret carelessness and thoughtlessness of manner, but it avails us little. Words once spoken are no longer our property and cannot be recalled.

> Boys flying kites pull in their white-winged birds;
> You cannot do like that when you are flying words;
> Thoughts unexpressed will sometimes fall back dead,
> But God Himself can't kill them when they're said.

In this age of democracy and constant reversion of fortune, it is well to remember that the employee or the commercial traveler of to-day may be the big business man of to-morrow. Even some men whom we are prone to despise and to whom we are habitually discourteous, may some day rise to the top of the ladder of fame and fortune.

But despite all we have said, we believe conditions are improving—we believe that business men generally are becoming more truly and sincerely courteous, and that it is a sign of stagnation and out-of-dateness to be otherwise. And we have written this in order to rouse and encourage the splendid men engaged in the hardware trades throughout the Dominion to a fuller sense of their privilege and responsibility in dealing with their fellow-men.

The Business Situation

THE advent of spring has given rise to a feeling of optimism among hardware merchants. Domestic trade, eliminating some of the larger industries, is regaining some of the lost activity and it will continue to become more buoyant as the spring season advances. Booked orders for spring delivery are moving out in a satisfactory manner, and in many cases are equal in size to the orders placed last year. Business, particularly in the smaller towns and cities, is picking up splendidly. In some of the larger centres trade is not yet as good as expected, but a gradual improvement in conditions is noticeable.

In the metal markets the general condition has not been altered much, although a slight feeling of optimism prevails. Buying is of a hand-to-mouth character and very few large orders are being placed. Collections, while not as good as might be desired, are showing slight improvement. Hardware jobbers expect that the month of March will compare favorably with the corresponding month of last year. In some instances February business fell behind that of last year. Paint manufacturers report that business with the hardware trade is fully up to that of last year. Trade has fallen off to some extent with the large manufacturing plants who use paint in their products. There have been a number of price reductions on hardware lines, although it is generally believed that these reductions will be of a temporary nature. Talk of tariff changes has had a depressing effect on some lines in which there will not be a revival until the Finance Minister announces the changes which the Government has decided upon in respect of the iron industry. The Financial Post commenting on the business outlook says in part:

As to the money outlook, the demand for commercial accommodation is undoubtedly considerably less than it was a year ago at this time, and that the demand would likely tend to fall off a little more as the year advanced. This, of course, would mean the return of funds to the banks and a piling up of resources. However, we are loath to believe that there will be anything approaching easy money in this country for some months to come. We may also point out that funds accumulate at an enormous rate in Great Britain, and that such accumulations would perhaps rectify the condition of over-extension more quickly than might otherwise be looked for. The lessening in the demand for commercial loans should ultimately benefit stock brokers, but the banks are not likely to give any countenance to speculation in any kind of securities while there is any factor in the world's money outlook of a serious nature.

Aside from the larger requirements of the Dominion in the form of loans for railroads and possibly further borrowing on the part of the Government, there is not going to be a pronounced demand for money. If there was one, it would not be met, as we have already pointed out. Banks will remain cautious, and their attitude in this respect has been accentuated by the tragedy in Paris and the Ulster crisis. For a time Mexico is not so serious a factor, and Brazilian trouble is passing away; all that is left of it of a serious character is some speculation in that country's securities. Ulster and Paris are very close to the quick in respect of our capital supplies, and naturally the trouble at these points has a depressing effect.

It is satisfactory to note that Canada's exports are gradually moving toward a closer approximation to the amount of exports. This is no doubt due to the changes in the United States tariff. How these changes will eventually affect the Dominion is becoming apparent, and our information is to the effect that the changes will direct industrial enterprise towards the Dominion. During the present year, if trade in the United States improves, we are confident that the effect on Canada will be very marked.

Sheldon and Salesmanship

SHELDON says that salesmanship consists in selling goods at a profit and Sheldon has given a good deal of thought to the question.

Salesmanship is therefore not cutting prices. It does not mean the selling of goods for 99 cents that cost a dollar. Neither does it mean the selling of an article that costs a dollar a dozen for 10 cents each. When overhead expenses are taken out the profit has vanished.

What Mr. Sheldon means is this: In order that there be the element of "Salesmanship" in the passing of an article from one to another, the seller must have a definite margin of profit above the total cost.

How easy it is for cut-rate drug stores, for instance, to have extensive turnovers! Many dealers and clerks have erroneously got the idea that they are salesmen because they sell large quantities of an article, the regular price of which has been cut in two. Anybody can do that. But when a dealer sells an article at a cent above his competitor he must be classed in the ranks of the salesmen.

A Well-Equipped Retail Hardware Store

Attractive Fixtures in the Brandon Hardware Co. Store, Brandon, Man. — Advantages of Having Goods Well Displayed — The Healthy Store.

ONE of the best examples in Western Canada of the effective use of modern hardware store fixtures is seen in the store of the Brandon Hardware Co., Brandon, Man. That each shelf can be made an effective display medium has been clearly demonstrated in this store.

The firm had the fixtures installed ten years ago and during that time many sales have been made as a result of this method of displaying goods. The accompanying illustrations show sectional views of the household goods, and tool and cutlery departments.

It can be seen from the cuts that the ceiling is exceptionally high. In the household goods department the shelving is adjustable. Each shelf can be placed as high or low as desired to accommodate the various lines of goods which it is necessary to carry in this department.

Enamelware, aluminumware, etc., shown in this manner present a very attractive appearance that will appeal to lady customers, especially those directly interested in kitchen utensils. The high shelves are reached by means of sliding ladders.

In the cutlery and tool department shelf boxes are used. Each box or drawer has a glass front and samples are displayed on a board, immediately behind, covered with red felt which with the sample shows plainly through the glass front. These fixtures were installed in 1904, and a number of the samples look almost as bright to-day as they did when they were installed ten years ago.

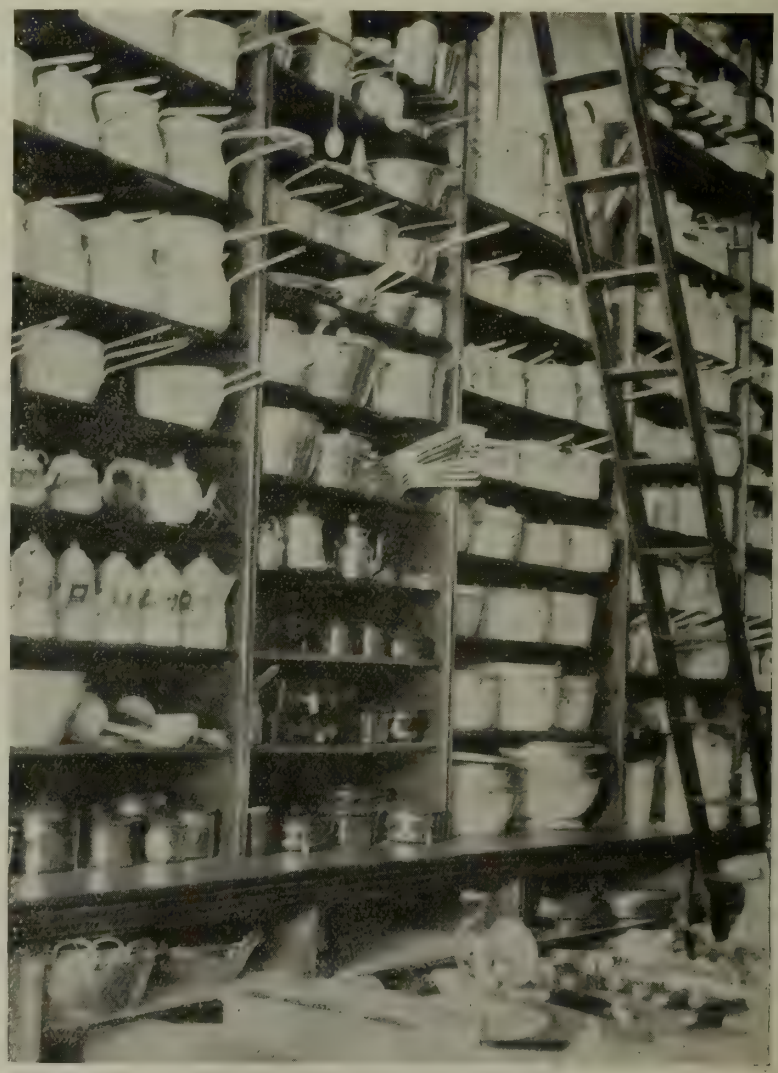
A large number of lines are displayed in silent salesmen.

A number of household lines are shown on tables which have been placed in the household goods department. One of the commendable features in this store is the fact that the store does not look overcrowded. Ample display space is given to each line of goods.

Many of the heavy lines of goods are shown upstairs.

Oils are stored in a special fire-proof room in the basement and are supplied to the store above by a battery of self-measuring pumps.

A visitor to the store is struck by the neat appearance of the stock, and neatness is one of the predominating features throughout the store.



The ceilings in the store are very high and one of the commendable features is the attractive metal ceiling.

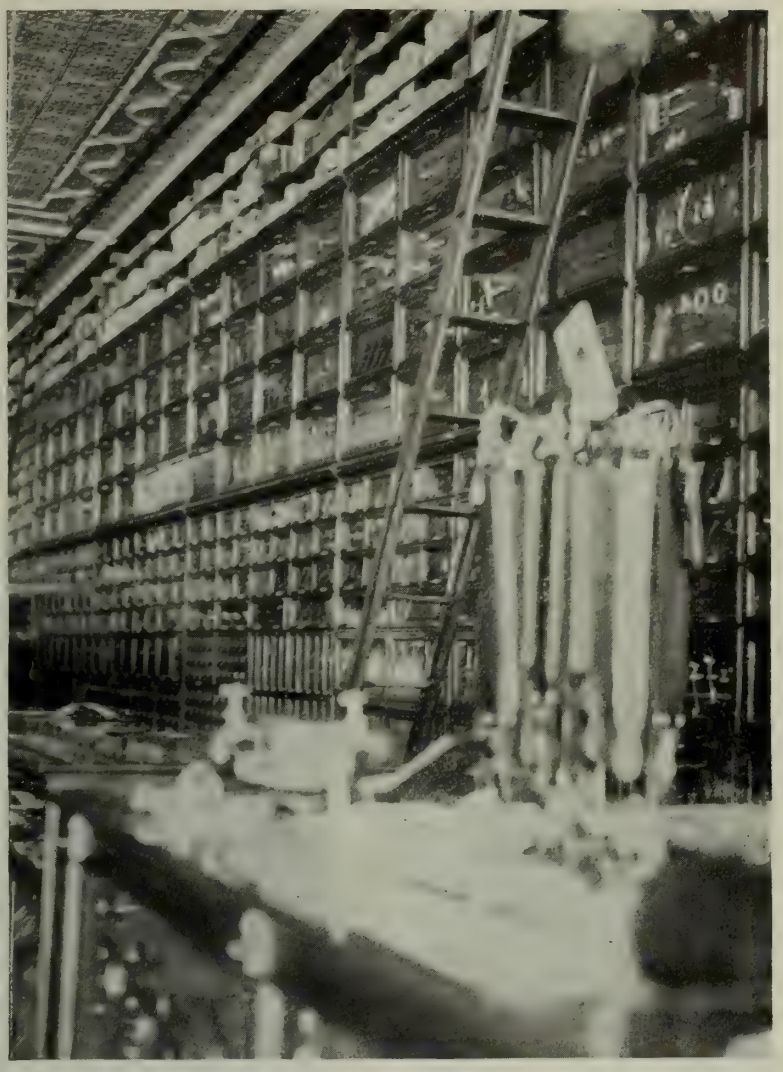
There is a marked tendency on the part of retail hardwaremen in many parts of the country to install modern equipment. During the past few months several retail hardware firms have informed Hardware and Metal that it is their intention to install modern display equipment. Many styles of display fixtures may be purchased by the retail hardwareman. There are many novel methods which may be used, not only to display the goods, but also to save space. In many of our retail stores space is at a premium and the retailer has difficulty in properly displaying his wares. Practically all retailers agree that samples of all lines should be on display. Customers entering a hardware store like to see a nice array of samples—in fact, they expect to see it—they also like to see everything in the store in a nice orderly condition. A recent issue of Plymouth Products refers to the healthy store as follows:

"His store is healthy, that is why I trade there," said my friend, the builder.

"Why do you use the word healthy?" I asked.

"Listen! Dirt is nothing but matter out of its proper place. Disease is nothing but dirt. A healthy body is clean, wholesome, radiant, active, intensely alive. Every fiber is of the right quality, and is in the right place. Every part does the work for which it was

View of section of household goods department in Brandon Hardware Co. store, Brandon, Man.



created. It is built to serve, to work efficiently, and it does.

"Now, let's look at that store of Henderson's. The outside is inviting. One would think that he had been trained in one of those high-grade candy stores where they sell bon-bons for two dollars a pound. He has somehow performed the miracle of making uneatable things look appetizing.

"Inside is order. There is a place for everything, and everything is in its place. The salesmen and the customers do not have to stumble over odds and ends. He has made the place like a home that radiates hospitality. Henderson is like the fellow who owns the Mission Inn out in California, and who puts cut flowers and baskets of fruit in the rooms of his guests every day. He makes the visitor feel welcome. When I go in there he makes me feel that he wants to serve me, but that he is not vitally interested in selling me things. There is a difference, you know."

There, you have it! You are interested in one thing—to sell your goods at a profit to the satisfaction of yourself and customer. Healthy, laughing, radiant folks attract friends, make them feel at home, fill them with comfort, and they, without your urging, buy your goods. You want them to buy your goods, therefore you make your store healthy, clean, orderly.

Ingersoll used to say that the time would come when people would see that health is just as catching as disease. Employ healthy clerks, treat them so that they will remain healthy, keep your store clean, wholesome, orderly, make friends of both clerks and customers, and you will find yourself blessed with all the business you are equipped to handle.

Sectional view of cutlery and tool department in Brandon Hardware Co. store, Brandon, Man.

WALTER C. ALLEN ELECTED VICE-PRESIDENT.

At the meeting of the Board of Directors on March 12th, 1914, immediately following the annual meeting of the stockholders of the company, Walter C. Allen was unanimously elected a vice-president, all of the other officers being re-elected for the ensuing year, the list of officers thus standing as follows:

President—Mr. Henry R. Towne.

Vice-Presidents — Schuyler Merritt. Walter C. Allen.

Secretary—J. H. Towne.

Treasurer—John B. Milliken.

For the past five years Mr. Allen has held a position of general manager, and as such has had charge of the sales policy and management in all departments of the business, at home and abroad, excepting the bank lock department. With the title of vice-president and general manager, he will continue to perform the important duties thus implied.

Mr. Allen was born in Farmington, Conn., but came to Stamford when about eight years old, and has lived there ever since. He entered the company's service in 1891, securing a minor position, on his own application, and retaining it by proving his merit. Within a year he was promoted to a clerical position, which he soon resigned in order to enter himself as an apprentice in the tool and machine shop, where he served for three years and thus gained a mechanical experience which greatly aided him in his subsequent career. During the next three years he worked as a draughtsman, in the company's drawing office, and in 1900 was placed in charge of certain important work in the bureau of costs. In 1905 he was appointed asst. general superintendent under the late Fred T. Towne, and on the death of the latter in 1906 was appointed his successor. In this position he had the direct and responsible management, under the president, of the entire Stamford plant. In 1909 he was transferred to the general offices of the company in New York City, and, as general manager, was placed in charge of the commercial and sales division of the company's business. His election as a vice-president of the company is a significant recognition of his successful discharge of the large responsibilities which have been intrusted to him.

The men at the head of the three broad divisions of the business, responsible directly to the president, are:—

Walter C. Allen, vice-president and general manager.

Joseph A. Horne, general superintendent of works.

John B. Milliken, treasurer (finances, accounting and statistics).

To Carry Stock in Winnipeg.

The Onward Mfg. Co., Berlin, Ont., announce that in future they will carry a stock of Onward Sliding Shoes, vacuum cleaners, etc., in Winnipeg. Orders will be filled by the firm's Western agents: Moncrieff and Endress, Ltd., Scott Building.

Steady Expansion in a Small Town

Methods Adopted by N. Langevin, of Valleyfield, Quebec—How He is Using His Premises to Increase His Revenue—System of Training Clerks—$80,000 Turnover in Year.

"YES, sir, it is over 30 years ago since I started my business in Valleyfield," said Mr. N. Langevin to a representative of Hardware and Metal recently, "and during that time I have branched out and added to my premises until you see where I am to-day."

When asked by Hardware and Metal how he accounted for his success and what methods he had adopted, Mr. Langevin replied: "I have simply kept the stock, always been right with my customers and have made my business by honest efforts."

About 30 years ago Mr. Langevin started business in Valleyfield in a very small way. He used to dabble in leather to a certain extent, but gradually dropped this and gave all his attention to hardware.

Ten years ago it became necessary to enlarge his premises as the business had now grown to such an extent that more space was needed to carry the stock.

The accompanying illustration will show the new premises, which were erected.

Additional Revenue.

As these plans would run into quite a sum, a little more was added to the original figure and a first class hall was included which consists of the top flat. This is rented to different lodges and also for dances, etc., and brings in quite a nice sum during the year, which helps reduce the overhead expenses. The second floor is divided into two sections, the back being used as a store room, while the front is rented for office space. This also reduces the overhead expenses.

Store Quite Spacious.

The outside appearance of this store is very deceiving and it is not until one enters that its true size is realized. The measurement is 35 ft. wide x 100 ft. long with a 16 foot ceiling. This allows abundant room for display purposes.

Store Room Used.

At the back of the store a large warehouse has been built for stocking the different lines carried. This is also quite spacious, the measurements being 30x68. Then again another storeroom has been built down close to the railway tracks where cement, coal, lime and so forth is stocked.

Mail Order Business.

The surrounding districts are depending on the merchants of Valleyfield for supplies, and Mr. Langevin handles considerable of this trade. When asked how he held this trade, Mr. Langevin replied: "Simply, by fair treatment and 'delivering the goods.' A man in a small town, to get along, must have a good name it it is always my policy to protect the name of Langevin as it has stood up for quite a number of years now."

"I don't advertise at all, because I can't see where it would pay me. My business is carried on successfully to-day because we never go back on our word and always carry a full assortment of the best lines."

Breaking in New Men.

When asked by Hardware and Metal what policy he followed when starting

(Continued on page 40).

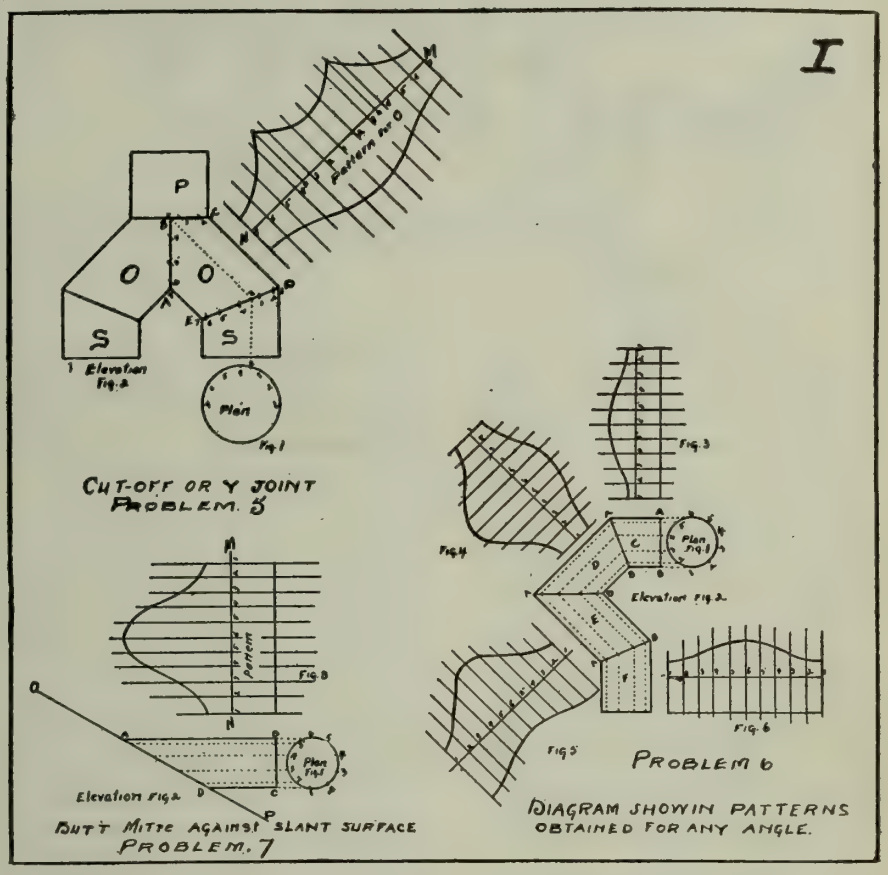
Exterior view of N. Langevin's store at Valleyfield, Que.

Problems in Sheet Metal Work

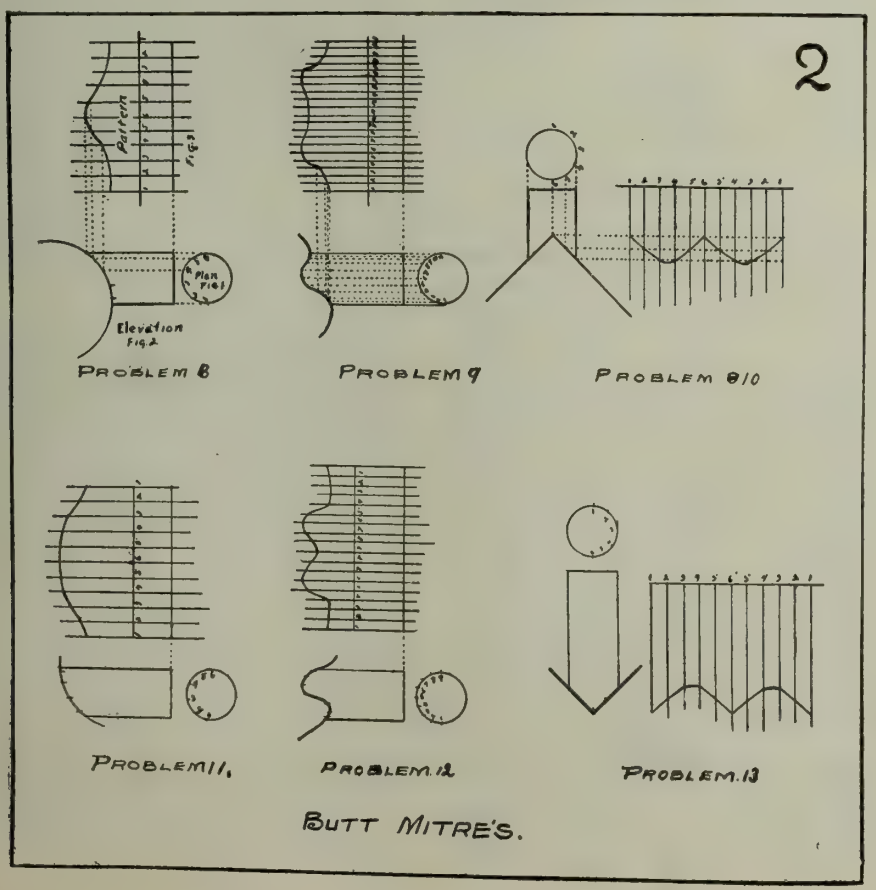
PROBLEM 5, plate I, illustrates a Y-joint in pipe. This can be a cut-off for a small conductor pipe, or a Y-joint for a large blower pipe. The size makes no difference.

The top piece P is straight and necessitates no pattern.

The pattern for the bottom is developed as explained for problem 7, Fig. 3.



The gore piece O, is very similar to the gore piece C, problem 3, plate 12, and is developed in practically the same manner.



Lay out the plan, Fig. 1; then the elevation Fig. 2; keeping one arm of the elevation in line and directly above the plan.

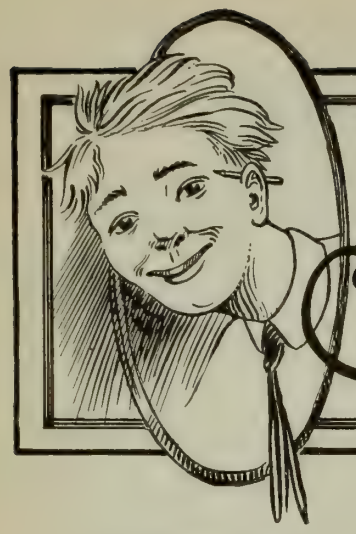
One half of the plan is then stepped off and numbered as shown and vertical lines are carried from the numbers to the first mitre line E D, then parallel to C D, to the next mitre line A B C.

The stretchout N M, is then laid out at right angles to the line C D, and the usual measurement lines drawn.

The T-square is then placed so it will run parallel to N M. Bring it against each one of the points on the mitre lines, and cut the corresponding measurement lines.

In measuring off the plan of a Y-joint, it seldom happens that any of the regular lines come into the point B on Fig. 2, therefore to get the pattern extended up to this point, we draw a line from the point B parallel to the line C D, until it touches the mitre line E D. Then we drop it vertically to the plan Fig. 1, to get its position for the stretchout line.

We call this line "x" or anything to distinguish it from the stretchout line.



It will be noticed in this case that it comes between 3 and 4 on the plan.

Now we want a line on the stretchout to correspond to this line, to have the same position on the stretchout that it has on the plan, so we transfer the space X3 or X4 from the plan to the stretchout and draw the measurement line X.

Then place the T-square parallel to the line N M, bring it against the point X or B on the elevation and cut out the measurement lines X on the stretchout. A line traced through the points on the measurement lines completes the pattern.

Problem 6, plate I, shows elbows running in different directions. This example is intended for practice on what

(Continued on page 50.)

THE JUNIOR CLERK'S PAGE

BUSINESS MEN.

"A business man is one who decides things quickly and is sometimes right. He knows that honesty, or the truth, is the best way to make money, and if he knew a better way to do it he would adopt it. Business men must be honest, for that is the only way they will have friends, and you will all know that we make our money out of our friends, because our enemies will not trade with us.

"One fact we must all bear in mind, business men and others: that fact is that we are here. The scientists tell us where we come from, and the preachers let us know where we are going, but the one hard fact is that we are here, and we cannot get out gracefully without making a mess that someone else will have to clean up.

"So we are going to help people all we can; we are not going to make things unpleasant; we are going to give away all the best things we have, good will, a smile, a helping hand. Our modern business is proof of the improved adage that 'bread cast on the water will come back buttered.'

"We are all in the game of hard work, mixed with play. The man who cannot play cannot work, and his nerves will soon get on the outside of his clothes. I have always found that the more work a man does the better his body is for it, and his 'think tank' improves correspondingly.

"I have heard of men retiring from business for a 'good time,' but let me say to you Rotarians that a man who does not have a good time in his business should be out of it. And your mission in life is to help others, to make two laughs grow where but one grouch grew before.

"A new phrase I have heard of late is 'survival value,' and I have come to think it is the only thing worth while. Everything in life ought to cast a purple shadow. If men had no other object than making money, the survival value would be very small, but he builds to help those who live with him and those who will come after him.

"The cold fact remains, we are here. And the best way to show our love of God is to think of the man around the corner or across the street. The best way to prepare for the life to come is to live up to our highest and best and the Gods will look out for us up there.

"But I am to talk about getting together and I will take of that man who has done more to help the world get together than any other, Thomas A. Edison, who by his inventions, brought the world to know the world.

"The three jewels may be Faith, Hope and Charity, but there are three others which I think just as important. They are Mutuality, Reciprocity and Co-operation. We have passed out of the stage of competition into the era of co-operation and the Rotary Clubs symbolize this fact. The science of business is the science of human service."

STEADY EXPANSION IN A SMALL TOWN.

(Continued from page 38.)

in new clerks, Mr. Langevin replied, "Every man who comes to me must start in by handling the delivery waggon, unless, of course, he has had previous experience. As soon as we find business heavy enough we move every one up a peg and bring the delivery man inside to the warehouse to look after the stock. The man in the warehouse is brought out to the store and given a chance to show his ability. During rush hours we sometimes find it necessary to bring in all the warehouse men and in this way we are able to pick out the salesmen. When the rush season is on, my staff will number eight and the men who show the best selling ability are kept in the front to look after the customers."

Cash System.

Every article purchased in this store must be accompanied by a bill made out by one of the clerks and the cash is carried to the cashier's wicket in the back of the store by a cash carrier.

Stove Business Also Good.

The stove department occupies the middle of the store and a display is made of all different sizes and makes on an elevated platform. The customer, upon entering the store, cannot help but see these displays, and Mr. Langevin claims that this feature alone has helped swell his stove turnover, which amounts to over $6,000 in a year.

All smallware and builders' hardware is stocked in drawers running the full length of the store and within two feet of the ceiling. A ladder which runs along on tracks is used in gaining access to the top drawers.

Oil Pumps Used.

"Yes sir, I installed those pumps some time ago and if my business warranted more of them I would not be without them, as they save the time of two men during a rush." This is the answer given by Mr. Langevin to Hardware and Metal concerning pumps used for pumping oil from the basement to the store. This store is equipped with three of them and, as stated, if more were needed the firm would not hesitate to install them, as they are time savers.

Window Displays.

Owing to the extremely cold weather in that district during the winter months very little attention is paid to window dressing, but during the summer they are changed generally every two weeks, as Mr. Langevin claims this is one of the best methods of securing business. "A good window is an asset and although it takes time, it is well worth it, as it not only displays the goods but often reminds the transient of a needed article."

Like all country dealers, Mr. Langevin is obliged to extend quite a lot of credit, but he judges his clients carefully and sets a mark as soon as they reach his figure, then credit is stopped, until the account is straightened out. A few customers have been lost in this way, but Mr. Langevin claims that it is the system to avoid bad debts.

"Salesmanship"

Extracts From an Address Delivered Before the Sales Managers, Salesmen and Purchasing Agents of the Pittsburgh District, Under Auspices of the Pittsburgh Industrial Development Commission.

By Col. H. P. Pope, Chairman, Pittsburgh Industrial Development Commission; Vice-President and General Manager of Sales, Carnegie Steel Co.

IT seems to me almost a work of supererogation to address such a body of men as is before me, on the subject of Salesmanship. The fundamentals have been the same in all ages, and their application has been changed only in regard to the changing conditions of trade. Nor is salesmanship a thing of recent growth, as is evidenced by an incident related to me by a friend of mine, some months ago, when he told me briefly that his study of the history of Egypt showed that the first traveling salesman was sent out by one of the early Pharaohs to the upper regions of the Nile, to exchange th product and manufactures of Egypt for the gold and ivory of the Upper Soudan.

I have often wondered what were the methods adopted by the great merchant princes of the Roman period. Men like the Princes of Hur, whose caravans and whose fleets visited all the known portions of the world. Of course trade in those days was largely in kind. The man who had a surplus of one product exchanged it for what he needed of the surplus product held by another man; and it was a contest of wits purely in determining values of the articles so bartered.

As the nomadic tribes ceased to wander and became fixed in permanent communities and these communities in time joined hands and formed state and nation, it became necessary to find a medium of exchange to determine the values of the articles so bartered, and hence money in its various forms became known. Gold, as the most valuable of the precious metals, for many reasons, was, and has been, used ever since as the great standard of value, and in that particular respect it has been the great, civilizing influence of the ages. While its forms are not so many and its use not so great as the commodity in which we deal to-day, and which is known as "steel," and which in many respects is the greatest non-human civilizing influence that the world has ever seen, money has played a most important part in the development of trade and commerce. These relations having been established, it became necessary to place the relations of trade in the hands of salesmen, and I have no doubt that the qualities of true salesmanship have been common in all ages.

Honesty First Requisite.

The first requisite, in my judgment, of the real salesman is honesty; honesty in the presentation of the articles he has to offer. A salesman's statement should be as good as a bond. There should be no misrepresentation in price, quality or delivery of the articles he has to sell, for while misrepresentations may obtain a customer, they never retain him. There may be some feeling like that expressed by David Harum, to "do unto others as they would do unto you, but do it first;" but what may be right and proper in a horse trade would be undignified and out of place in the great relations of trade to-day. These relations have become so large, so important, that it takes something more than a small man to represent a great institution. A salesman should establish such relations with his customers that his word becomes unquestioned. When this occurs he is always welcome, and he establishes such connections as make for his own advancement and for the good of the institution he represents, for having established a clientele, which, while it is retained by the service back of the sale, is nevertheless a part of the personal asset of the salesman himself.

As to the next quality of salesmanship, I should designate knowledge of the articles sold. This is of supreme importance. A customer can have no confidence in the statements of a man who does not know the character, value and quality of the articles he proposes to dispose of. So much has this become the case that in our own organization we have established a school of salesmanship in which our people are brought to the mills and given a thorough course of instruction in methods of manufacture and operation, so as to fit them to talk intelligently to their trade when called upon to do it.

The third qualification I would suggest, is a thorough knowledge, within reasonable limits, of the business of customers. They should know all that can be obtained in an honest, business-like way, of the amount of material or goods used; character, quality and methods of manufacture, if customers are putting material they purchase through a process of manufacture before resale. Such knowledge, coupled with similar information about the goods he sells, will enable a salesman to be of great assistance to his customers; and it is not out of the way, nor does it show a sense of trying to tell a man what his business is, or should be, if a salesman can in a proper tactful way, assist him in cheaper production or better distribution of his goods.

Ambition and Energy.

The fourth qualification is, of course, ambition and energy. Someone has said that he had no use for a man who was so satisfied with his position and everything pertaining to it that he had no ambition to rise beyond it, and this statement contains a great deal of truth. It is true a man may become so restless that he unfits himself for the proper filling of duties which have been assigned to him, but at the same time no man ever suffered from the restlessness which comes from a desire to better his situation and which has been justly called the "Divine discontent." It is this feeling which has led to all benefits in this world. It has inspired the explorer, the inventor, and all men desirous of bettering themselves and the world by what they could do. It is an amiable quality because it is not accompanied by a desire to ruthlessly tear down the positions of those above them, but simply the wish of the man who has this feeling to fill a wider place when the opportunity comes to him.

And with this we should associate tact. No quality of the salesman is more essential in the handling of his business than a tactful method which may largely continue his own personality. For example, if the salesman calls upon a man who has suffered recent bereavement, or is in serious financial difficulties, or is so troubled with domestic matters or other causes which make him unfit for business, a tactful

(Continued on page 47.)

Current News of the Hardware Trade

Business Changes.

Sherbrooke, Que.—Jos. Lacombe has been succeeded by Jos. Lacombe & Fils, Inc.

Death of D. K. McLaren.

Montreal, Que.—After an illness of about four years David Keay McLaren, president of D. K. McLaren, Limited, died recently. Mr. McLaren, who was a native of Perth, Scotland, had been a resident of Montreal since 1864 and was interested in manufacturing enterprises until a few years ago.

Mr. McLaren was born in 1835 and came to Canada in 1852. He was associated with his brother the late J. C. McLaren, in the belting business for about 18 years. In 1896 he founded the present business house, which was incorporated as D. K. McLaren, Limited, in 1907, and was president of the concern up to the time of his death.

Companies Incorporated.

Metallic Tire Expander Co., head office, Montreal, Que., capital stock, $250,000.

Self-Sanitary Closing Cans, Ltd., capitalized at $50,000 with head office at Calgary, Alta.

A Aubry & Fils, Limitee, caital stock $150,000, to mine, smelt, cast, forge, enamel coat and plate metals, etc., with head office at Montreal, Que.

Liquid Fuel Utilities Co., capitalized at $50,000 with head office at Winnipeg. Incorporators: A. H. Shields, L. W. Hagg, R. S. Beattie, Jas. Kay, Albert E. Bowles.

Kingston Iron and Tube Co.

Kingston Iron & Tube Co., Ltd., Kingston, Ont., capitalized at $1,000,000 has been incorporated for the purpose of manufacturing and dealing in all kinds of goods, wares, etc., and more particularly in iron, steel, nickel, galvanized and lead pipes, tubing and other kindred products. Incorporators: J. E. Dey; J. M. Ferguson; E. F. MacDonald, J. P. Walsh; Eileen Jameson.

Increased Capital.

The capital stock of the J. C. McLaren Belting Co., has been increased from $75,000 to $150,000.

Addition to Plant.

The L. Martin Co., has recently completed a large brick addition to its plant in Philadelphia for the manufacture of high grade lamp black exclusively. Plans have been laid for a still further increase in the plant. An addition to the London, Eng., plant is also under consideration.

Personals.

J. W. Gaede, manager, Buckeye Saw Vise Company, Cleveland, was in Montreal during the week.

Gordon C. Seybold, general manager, Cochrane Hardware Company, Sudbury, Ont., was in Montreal this week on a business trip.

Among the business visitors in Toronto last week were: G. W. Ecclestone, Bracebridge; Jno. Harnsworth, Berlin; Thos. Lochart, Galt.

The Soo Hardware Co., Ltd., of Sault Ste. Marie, has lately been reorganized. Edwin Keys and Jas. S. Reynolds have secured an interest in the business which in future will be conducted by them.

Jas. S. Reynolds, formerly manager of Plummer-Ferguson Hardware Co., Sault Ste. Marie, Ont., for the past ten years, having secured an interest in the Soo Hardware Co., Ltd., of that place, recently assumed the management of the latter company.

Among the representatives calling on the Montreal hardware trade during the week were: J. H. Cameron, Winchester Repeating Arms Co., New Haven; Alfred Hahn, Stratford Brass Co., Stratford; Scott. C. Ball, Sargent & Company, New Haven; H. P. Hubbard, E. C. Atkins & Co., Hamilton; J. Herbert Porter, Bissell Carpet Sweeper Co., Toronto; Clive Hatch, Martin Manufacturing Co., Whitby.

New Firms.

Montreal, Que.—Wm. Patterson & Co., hardware, have registered.

Galt, Ont.—It is expected that a new industry, the Rion Silverware Co., Ltd., in which Toronto men are interested, will locate here in the near future.

The Canada Malleable Steel Range Mfg. Co., Oshawa, Ont., are reported contemplating opening stores at Regina and Moose Jaw, in the near future.

Changes Firm Name.

Burlington Steel Co., Ltd., formerly Canada Steel Co., Hamilton, Ont., have sent out the following announcement:—Owing to the similarity of names of several companies in our city and the confusion resulting therefrom, we have determined to change our name from the Canada Steel Co., Ltd., to Burlington Steel Company, Ltd., under which name we will in future transact our business.

Additions to Staff.

The Canada Paint Co. announces the addition to their staff of traveling representatives of Albert C. Watson Soper. He will look after the Cobalt district, North Bay to Fort William, Sault Ste. Marie and Manitou Islands. For the past ten years Mr. Soper has been traveling for the Ogilvie Flour Mills Co. He knows the territory well and is very popular. Mr. Soper was born and educated in London, England. When the first Canadian contingent was formed in 1900. Mr. Soper enlisted at Winnipeg, and after active service during the war returned to Canada.

R. I. Sirman, a native of Toronto, who has been with The Canada Paint Co. for the past eleven years, has been appointed to cover the territory immediately west of Toronto. Mr. Sirman very quietly got married three weeks ago. With such good fortune, we are sure that Mr. Sirman will make many friends in the trade, and will find his new territory will come up to his expectations.

Western Notes.

A. Bachmann, a pioneer hardwareman of Killaley, Sask., was in Winnipeg last week.

J. Mohr, hardware buyer for the Marshall-Wells Alberta Co., Edmonton, was in Winnipeg on business last week.

Elfros, Sask.—H. P. Bole, hardware and implement dealer has sold his hardware business to the Elfros Hardware Co.

H. J. Clare, manager of Clare and Brockest, Ltd., Winnipeg, has returned from Preston, Ont., where he was delayed for a time by illness.

G. F. Stephens and L. C. Stephens, of the G. F. Stephens Paint Co., Winnipeg, Man., have gone on a business and pleasure trip to the Pacific coast.

Edward Johnson, Brandon, Man., one of the best known hardwaremen in the West, has been in the hospital for several weeks. He has been operated on, and is recovering.

The Major Trading Co. have opened at Major, Sask., and are handling hardware. Their store is not yet quite completed. The proprietors are Messrs. Sutherland and Watson.

G. Darling, advertising manager for the G. F. Stephens Paint Co., was in Moose Jaw last week, attending the annual convention of the Retail Merchants' Association of Saskatchewan.

Weyburn, Sask.—A partnership has been arranged between D. Gallagher, late of Gallagher & Walker and D. Lythgoe, under the name of Gallagher & Lythgoe. The new firm will engage in the heating and plumbing business.

A. Kinnemann, Kindersley, Sask., was in Winnipeg during the week buying a new stock of hardware. He has been located in the above town for four years, and is one of several hardwaremen there. He is not buying heavily, being of the opinion that last year's crop was not so good as reported. He says he has a lot of people on his books who have never asked for credit before, and for that reason he is going slow.

Mr. Bradley, secretary-treasurer of Hood Limited, Prince George, B.C., was one of the interesting visitors to Winnipeg during the week, placing a large order for spring goods. He reports that prospects are excellent in Prince George now that the G. T. P. have their trains running through. He is one of the pioneers of Prince George, and walked sixty-five miles to locate there, and trucking his stock in trade. They have a baby at home, and there is only one cow in the vicinity. Milk costs 50c a quart, and a special teamster has to be sent for it.

APPRAISERS' BULLETIN NO 786

The following changes appear in a recent appraisers' bulletin for the guidance of customs officers:—

Correct Bulletin 630, page 16, heating pads, electric, should read 27½ per cent. instead of 35 per cent.
File No. 69575.

Tariff item 403A. provides for free entry of "wire rope for use exclusively for rigging of ships and vessels—under regulations by the Minister of Customs."

Wire rope for use as follows is held to be dutiable and is not classed as rigging, viz.—

Wire rope lines to be used as cables.

Wire rope lines for use as tow lines.

Wire rope lines to be used for moving the vessel or for holding the vessel in position.

METAL DISPLAY SIGN.

Canadian Yale and Towne, Ltd., St. Catharines, are offering the trade a new metal display sign made up in attractive colors and measuring 17x22 inches. The sign will make a handsome addition to any display, as well as a permanent store card.

These signs have already been distributed to a large portion of the trade, but those not having received one can do so by communicating with The Canadian Yale and Towne, Ltd.

HARDWARE LETTER BOX

Correct Address.

J. L. Demers, Thetford Mines, Que.—"Please advise me through your paper the correct address of the Barnum Wire & Iron Mfg. Co."

Barnum Wire & Iron Mfg. Co., Detroit, Mich.—Ed.

Ventilators.

Garnier & Henderson, Saskatoon, Sask.—"Can you advise us of firm manufacturing ventilators, stationary and rotary?"

A. B. Ormsby Co., Toronto; Metallic Roofing Co., Toronto; Wheeler & Bain, Toronto.—Ed.

Gasoline Irons.

Dan Shannon, Marmora, Ont.—"Would you kindly give name of manufacturers of gasoline irons for tailors' use?"

The following firms make gasoline sad irons; we are not sure, however whether they are specially designed for tailors' use or not. Taylor Forbes Co., Guelph, Ont.; Royal Iron Mfg. Co., Big Prairie, O.; Globe Brass Works, Detroit; Imperial Brass Mfg. Co., Chicago, Ill.—Ed.

Contractors' Levels, Telescopes, Etc.

W. Wallace, Comber, Ont.—"Please advise us what firms make contractors' levels, telescopes, etc."

L. S. Starrett Co., Athol, Mass.; Hughes, Owens & Co., Notre Dame Street, Montreal; Eugene Dietzgen, Ltd., Toronto; F. H. Hopkins Co., Montreal; Mussens, Ltd., Montreal; Bostrom & Brady, Chicago.—Ed.

Twenty Years Ago
In the Hardware Trade

The following items were taken from the issue of Hardware and Metal, March 31, 1894:—

"Five hundred barrels of crude oil was forced the other day from Oil Springs to the Alpha Refinery, Sarnia. The Alpha pipe line, though laid for many years, and unused, worked splendidly, the total length of oil piped being about twenty-three miles."

* * *

"The long-expected new tariff was brought down on Tuesday by Hon. Mr. Foster, minister of Finance. The most radical change is probably in regard to nails. On cut the reduction is 25 cents per keg, and on wire 75 cents per keg."

Editor's Note.—The March 31, 1894 issue of Hardware and Metal contained six pages of information, regarding the new tariff, including reports of interviews with many of the most prominent Canadian manufacturers in the hardware line.

* * *

An announcement is made in this issue of a prize competition conducted by Hardware and Metal. Three prizes were offered—$20 for first; $10 for second; and $5 for third, for the best essays on the subject: "Causes of failure in the hardware business and how to avoid it." The five essayists ranking in order after the prize-winners were to receive Hardware and Metal for one year. The contest closed May 1st.

DEATH OF T. M. PIPER.

The death occurred at Fort William on March 22 of T. M. Piper, a member of the hardware firm of J. & T. M. Piper. Death came unexpectedly, and followed about three hours after an operation had been performed. While the late Mr. Piper had been feeling unwell for short intervals during the winter, yet he was strong enough to walk to the hospital the day before he was operated on.

Thomas Moore Piper was born at Wardsville, Ont., in 1878. In 1885 he went with his mother to Fort William and resided there until the time of his death. At the age of eighteen Mr. Piper and his brother formed the firm of J. & T. M. Piper, which has been carrying on a successful business since 1896, opening at first in a little building, and later moving into the premises which they now occupy in the Piper Block. The late Mr. Piper took an interest in municipal affairs, and had occupied several civic offices. He also took a keen interest in sports and was an enthusiastic curler. The funeral was held on March 24 under Masonic auspices.

YOUR CUSTOMERS.

The hardware business doesn't differ in any essential feature from other retail enterprises; and the very same laws and principles that make for success in other lines of merchandising make for success in hardware. The people who buy hardware are just folks—not a unique order of beings at all—just folks, with the likes and dislikes, the follies and foibles, the strength and the weaknesses of other people.

New Goods Offered Canadian Hardwaremen

ICY-HOT HALF-PINT BOTTLE.

The Icy-Hot Bottle Co., Cincinnati, U.S.A. are placing on the market a new model vacuum bottle in the form of a half-pint bottle that can be carried in the pocket. It is designed to be particularly useful for workmen to carry in the pocket.

The makers claim that the bottle being of pocket size a great many workmen and school children carry it with

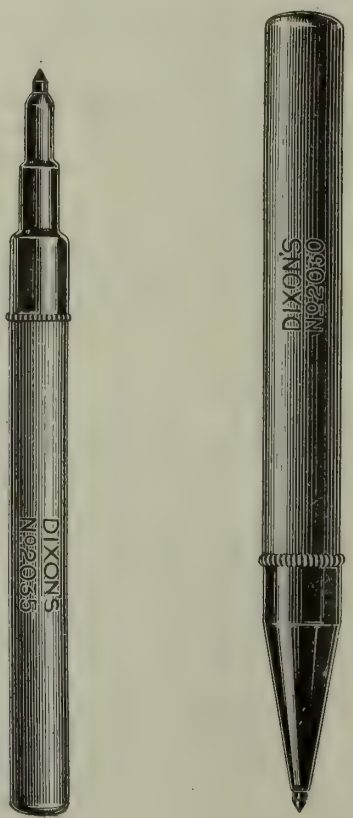
Icy-Hot ½-Pint Bottle.

their lunch, thereby providing hot soup or coffee to an otherwise cold meal. This bottle keeps hot liquids hot 24 hours, or cold liquids cold three days the same as the larger sizes. With careful use this bottle will last a life-time, as the chances of breakage have been reduced to a minimum by padded springs and rubber cushions which absorb all jars and jolts caused by dropping or falling over.

CEMENT COATING AND AUTO-FINISHES.

Pratt & Lambert, Inc., Bridgeburg, Ont., are offering the trade two new products which they have recently produced.

One line of automobile finishes consists of Effecto Auto Black Enamel, Effecto Auto Body Finishing, and Effecto Enamel Top Dressing.



The first is a black enamel varnish that hides disfiguring marks and scratches, and can be used over an old car in bad condition, black or other color, to give it an up-to-date black finish. The second is a clear varnish used to restore the lustre of an old finish which has become dulled through age, but is otherwise in good condition. The third is a finish to preserve automobile tops. These specialties are said to be very easy to apply.

The firm have also produced Vitralite Cement Undercoating, an undercoating for cement, which it is claimed the most practical and severe tests have proven to resist alkali. While the new coating was produced particularly so that it could be used as an undercoating for Vitralite for large cement and concrete construction jobs, it is said that it can be used underneath any paint.

PROPEL AND REPEL PENCILS.

The Joseph Dixon Crucible Company, Jersey City, N. J., has brought out what are designated as the "Propel" and "Repel" pencils for vest pocket carrying.

The larger size is ⅜-inch (No. 2030) in diameter, there being also a size ¼-inch (No. 2035) in diameter, respectively 4¼ and 3¾ inches long. The leads are gripped in the usual way and by a twist of the fingers advanced or receded as

Repel and Propel Pencils.

required. The pencils are made in red, white, blue, green, yellow and black enamels, all with black tips. They are put up twelve in a box either single or assorted colors as desired. There are six boxes in a carton and a box of extra leads goes with each pencil.

UNION AUTO JACKS.

The Richards Wilcox Canadian Co., London, Ont., are offering the trade the No. 328 Union Auto Jack which they have just produced.

Union Auto Jack.

The jack is composed of five malleable iron pieces. The foot of jack is extra large and the lifting bar is equipped with two lift brackets for use on high and low cars, or when the cars are sunk in mud. Height of first lift bracket in low position is 7¾ inches; height of second lift bracket in low position is 12 inches; lift 6½ inches.
specialties.

CATALOGUES AND BOOKLETS.

Roofing and Siding.

McFarlane, Douglas Co., Ottawa, Canada, have issued a 64-page catalogue of illustrations and suggestions about roofing and siding. The book is well illustrated and contains much information concerning the manufacture and erection of metal shingles, sidings, corrugated iron, eavetrough, conductor pipe, etc.

Home Creamery.

Home Creamery Mfg. Co., Oeratouna, Minn., have issued a 48-page booklet, on dairy farming, which is being distributed by their Canadian agents, Henderson & Richardson, of Montreal. The booklet also features the Minnetonia Home Creamery, a churn made in eight home and farm sizes.

Weekly Report on Market Conditions

Statements From Buying Centres on Prices and the Trend of Demand—Full Reports Dealing with Hardware, Metal and Stove Lines.

THE MARKETS AT A GLANCE.

March business in hardware lines has been brisk and jobbers report that a large volume of business is passing. The advent of spring has caused a feeling of optimism which is having a good effect. Paint manufacturers are busy and repeat orders have been received from some districts. In the metal markets trade is quiet. Lead has declined in price. Copper and tin have advanced. Iron and Spelter remain unchanged. O and A and brass and copper wire have also declined in price. List prices on clothes wringers have been lowered. Wire nails remain unchanged and it is not expected that a change will take place until after the Finance Minister announces the changes which the Government has decided upon in respect to the iron industry. The announcement will in all probability be made next week. It is not certain that there will be a change in wire nail quotations, but many of the makers claim that there is no profit in nails at present quotations.

There is no change in quotations in oil, paints, lead, turpentine, etc.

MONTREAL.

MONTREAL, Mar. 25.—The market this week has taken on a more active feeling and orders are coming a little more freely than last week. The Maritime Provinces are ordering quite heavily at present and the goods shipped there are mostly for spring and summer trade. Judging by the quantities ordered, there is apparently little doubt in the minds of the Easterners as to the future and their orders are even greater than last season.

Collections have not changed to any great extent from one week ago, and although they are steadily improving, there is still a lot more room left. The larger centres have not yet started their ordering, as the weather has been decidedly against this. At present there is still a feeling of winter in the air and this has kept the orders back. As soon as the sun becomes warmer and the snow disappears there will be quite an active trade in all spring lines.

Country merchants have also stopped buying to a great extent, although it is thought that the reason for this is the fact that the roads are now breaking up, which makes the carting quite heavy. As soon as this can be overcome that business will again pick up.

Reduction in Brass and Copper Wire.

There has been a reduction in both brass and copper wire during the week. The discounts have been increased to 50-5% and 50-2½% respectively, as against 45-2½% and 45% respectively.

Hose and Lawn Tools.

The demand at the present time is very good for all these lines and shipments are going forward to all centres daily. Hose, corrugated, is still quoted at 13½ for ½-inch, while 16 is being asked for the ¾-inch.

House-Cleaning Goods.

There is a splendid demand for all goods used in house cleaning and to say that the dustless mop is in favor here would be to put it mildly. There are a number of orders and some repeats being received for this article and it is certainly gaining favor with the housewife. Most dustless mops are quoted at $12.00 per dozen.

Brushes.

Although this might be included in the house cleaning line, it is certainly causing quite a lot of figuring as to the future. As we have been reporting for the last few weeks, the situation in rice root is rather firm at present and it would not be at all surprising to see an advance here. The retail trade seem to realize this fact as the orders being received now are quite heavy and for large quantities.

Roofing.

There is still improvement being shown in this department and orders are coming quite freely from all centres, principally the country, for good-sized quantities. There will likely be quite a lot of repairing started in the very near future, as all orders coming to hand are for immediate shipment.

Builders' Hardware.

The improvement noted last week in this line was not of a temporary nature as there has been a heavier movement noted this week again and it might be said that business is on the increase at present, although not yet what it was at the same period last year. This, of course, is accounted for by the fact that there is not the same amount of business going on at present as there was for the corresponding period last year. However, the way things are shaping up at present there seems to be a general feeling all through the east that business will go ahead again this year just the same.

Maple Tools.

There is still a very good feeling in this line and business has not slackened up a bit since our last report. All lines are moving out freely and as the sugar season is about to start, there is still good business looked for.

Driving tools are also moving out quite freely, and it is thought that the milder weather will stimulate this business greatly.

Enamelware is not too active but manufacturers are getting their stock into shape.

Refrigerators have shown some movement to date but were dead issues during the past week and have not shown much favor.

Metal Market.

The past week has seen little or no change in the local situation. Very little business is passing at the present time and with this featuring little can be expected until the buying commences.

Tin.

The quotation this week is the same as that of one week ago and given at 44 to 44½ cents per pound with open prices for quantity lots.

The New York market is stagnant while London seems to be quite active.

Spelter.

Locally, the situation is unchanged and as we reported a weak market last issue with a range of 6.00 to 6.25 as the quotation this still holds. The amount of business passing at present is practically nil.

London and New York both report a very dull market.

Lead.

The local situation is still quite weak and $5.25 to $5.50 is still being quoted. The business which is passing at present would warrant present conditions as it is quite limited.

Both London and New York report their markets as being "dull and uninteresting."

Copper.

Nothing has happened since last week and the same quotation of $16.50 is given by the local dealers. The market is considered to be easy at this figure with very little business passing.

Antimony.

There is very little business here, with $9.00 still quoted by an easy market.

Iron.

Here also business is quiet and the market is not considered to be too firm. The quotation of $19.00 per 100 pounds is still in effect.

Stoves, Etc.

There is no change from one week ago and as reported then business was quiet. Gas stoves are starting to move but this is not very heavy yet. Ranges are not moving at all, but business is only waiting for the weather now.

TORONTO.

TORONTO, March 28.—Trade in hardware and kindred lines continues to improve and it is expected that March business with Toronto hardware jobbers will surpass the business of the corresponding month of last year.

In some sections of the country there has been a tendency on the part of some retailers to hold back spring shipments, but this is not general. Collections are fair.

The Metal Market.

The advent of spring has given rise to a slight feeling of optimism, although the general condition is not altered much. Tin has advanced ½ cent per pound and there is a better feeling in the primary markets. Copper has advanced 25 cents per 100 lbs., while lead has declined 10 cents per 100 lbs. Iron and spelter remain unchanged. Buying is still of a hand-to-mouth character, but a steady improvement is expected from now on. Collections are only fair at the present time and have not shown the improvement which was hoped for.

Wire, Nails, Etc.

Some lines of wire, particularly O. & A. have declined 10 cents per 100 lbs. Sizes up to No. 9 are quoted at $2.30; No. 10 at $2.36; No. 11 at $2.42; No. 13 at $2.60; No. 12 at $2.50; No. 14 at $2.70; No. 15 at $2.85.

No change has taken place in the price of wire nails and quotations are still $2.15 base. It is not expected that there will be any developments until after the budget speech next week. Competition on wire nails has been very keen and price-cutting has been quite evident during the past six weeks. It is claimed that nail manufacturers are not making any money at present prices and it will be interesting to watch developments during the next few weeks.

Wood Screws.

Quite a number of retail merchants have stocked up heavily in screws during the past few weeks on account of the low prices which have prevailed, and which, it is claimed, have been caused by foreign competition. Quotations still remain the same as last week and are as follows:

Flat Head, Bright....85-10-7½-10-10%
Round Head, Bright..80-10-7½-10-10%
Flat Head, Brass....75-10-7½-10%
Round Head, Brass....70-10-7½-10%
Oval Head, Bright....80-10-7½-10-10%

Rope, Twine, Etc.

Twine has been more active since 1914 prices were announced. Booking for rope is fair although some merchants appear to be of the opinion that there will be developments in the rope market. Present quotations on rope are as follows:

Best Pure Manilla .....15c. lb. base.
British Manilla .....11c. lb. base.
African Hemp .....11c. lb. base.
Sisal Rope .....10½c. base.
Lath Yarn Single ..... 9¾c. lb.
Lath Yarn Double .....10¼c. lb.

Other lines are shown in Current Market Quotations.

Binder twine prices are: 650 ft. twine—13½c. lb; 600-ft. twine, 11c. lb; 550-ft. twine, 9¾c. lb; 500-ft. twine, 9¼c. lb; ⅛c. per lb. allowance on 5 tons and over; ¼c. lb. allowance on 10 tons and over; delivery allowed on 300 lbs. and over.

Clothes Wringers Decline.

List prices on clothes wringers have been changed, the new prices being lower than those which have been in effect for some time past. The new list prices will be shown in Current Market Quotations next week, a complete list not being available for this issue.

Stoves, Ranges, Etc.

With the opening of spring and the advent of finer and milder weather the demand for gas ranges has become more pronounced. Prospect at present are that in this line at least, there will be a heavy demand, and manufacturers are looking forward to one of the best years on record in the gas stove business.

There is a fair and steady demand for enamelware, aluminum ware and household goods.

Building Materials.

A very fair amount of building is now under way in various sections of the Province and the demand for building materials is growing. Cement and cement workers' tools are in very fair demand. Quotations remain as follows:

Portland cement, $1.55 per barrel, f.o.b. cars; $1.63 per barrel in car lots delivered. Less than car lots, $1.85 per barrel delivered.

Fruit Jar Rings.

Rubber rings are offered at 35 cents per gross for pint size and 40 cents per gross for quart size.

WINNIPEG.

WINNIPEG, March 22.—There is not a wholesale hardware house in Winnipeg that is not working full time in an endeavor to cope with the large spring orders that are coming in. This is in marked contrast to the condition of the hardware trade a month ago. The manager of one of the largest houses stated this week that notwithstanding the slackeness of trade of January and February, there is every indication that this will be a good season as soon as the weather settles.

One of the most important happenings this week was the coming together of dealers in stoves to agree on terms for selling stoves in Western Canada. The following were the terms agreed upon:

Spring Terms.

Stoves and ranges shipped between January 1st and March 31st, may be dated March 31st, sixty days net, due June 1st or 2 per cent. if paid on or before April 30th.

Midsummer Terms.

Stoves and ranges shipped between April 1st and June 30th to take regular dating at 2 per cent. cash, 30 days or sixty days net.

Fall Terms.

Stoves and furnaces shipped between July 1st, and August 31st, may be dated August 31st, sixty days net, due Nov. 1st or 2 per cent. cash, if paid on or before Sept. 30th.

One house reports business as good as March last year, while another reports an even better month than last year. There is a big demand for agricultural hardware, and a large business is being done in pumps. The demand for heavy goods is not so marked, especially for building material on large contracts.

A firm of eastern sheet metal dealers report that their Western business has been better in the past ten days than for two months. The recent thaw has cleared the air, and there has been a call for all kinds of building material, though the real summer demand has not commenced. Indications are that the demand is for smaller building supplies.

Regarding the statement in last week's Hardware and Metal that the Sarnia

Fence Co. would do business in the West through the Grain Growers' Association, the large wholesale houses are convinced that they can hold their own in the fence business.

Bluestone, which has had a big sale during the past month, will not be in demand again until next January. The business in this product usually lasts about a month. Formaldehyde is said to be replacing bluestone in the West.

During the past few weeks competition from small manufacturers in wire nails has been very keen in Winnipeg, and it would not be surprising to find a general reduction in price west of the lakes.

Some nice spring orders for stoves are being filled, but dealers are later than usual this year in ordering stocks.

In the paint trade, spring goods are still moving out very freely, and have been for the past three or four weeks. This is the heaviest time of the year. In two or three weeks, sorting business is expected to be in full swing.

A TRADE VIEW ON THE IRON AND STEEL SITUATION.

A recent issue of the American Metal Market gives the following on the iron and steel situation:—

A member of the trade reviews the situation as follows:—The steel industry is operating at between 70 and 75 per cent. of its full capacity, the rate not having changed in the past thirty days. New buying reached its height the last week in January, and decreased rapidly in the first week or ten days of February. Specifications on contracts, involving the actual shipping instructions, were very good until the middle of February, when they began to decrease. By the early part of March they had decreased to very small proportions, and now the condition is, that there is hardly any new buying, while specifications are relatively light, very materially less than the current rate of shipments.

While shipments of steel are maintained at as good a rate as at any time in this movement, in practically all branches of the finished steel trade, the outflow in shipments is much greater than the inflow in actual orders and specifications, so that the mills are losing in actual shipping orders. On an average they have enough business to maintain the present operation for about thirty days, not longer, with a considerable back-log business extending over a longer period.

The lull which began in February was expected by the steel industry, for it was recognized that the January burst of buying was largely to replenish badly depleted stocks, and no important additional buying could be expected until spring should bring an increase in consumption. During the extremely bad weather of late February the poor buying was attributed to the weather, but since then quite favorable weather has come in company with still poorer business.

The steel industry can find nothing wrong with its technical position. Stocks cannot be large; it is only recently that they were regarded as exceptionally small and buyers are urging quick deliveries on material ordered. Since the orders have not already been placed, spring should be bringing a great influx of business. Prices are not unreasonable or unhealthy; they do not average as much as $2 a ton, perhaps not more than $1 a ton, above the recent low level, and the mills would hardly let that stand in the way, but the buyers are not giving them an opportunity to negotiate.

The steel market finds nothing wrong with itself; the condition is healthy in itself. Whatever is wrong with the steel market is wrong to a greater extent with the markets in general. The steel industry is in better position itself with relation to the general state of trade than has usually been the case in the past. In the past fifteen years the steel industry has operated at 90 to 100 per cent. of capacity not more than half the time; operating now at 70 to 75 per cent. of capacity, it is doing better than would be expected, considering general conditions.

"SALESMANSHIP."

(Continued from page 41.)

salesman will not push his goods, but will express his sympathy over it so far as it can be extended, and lay the groundwork for strong friendship and subsequent business. It is one of the great opportunities of the salesman that he has occasion to study human nature, and the closer this study is made the better for the student. It teaches a man to be sympathetic, to be kindly and broad in his judgment, and while this need not necessarily take away shrewdness or ability, it tends to complete a rounded character, which has no sharp corners, and by means of which the salesman makes his greatest successes.

Another quality is patience, and this is particularly desirable in the younger man who is making his early rounds, because, with the experienced man, it is a quality which comes of itself. Experience in the handling of goods produces patient selling. It is not always a man makes a sale the first time he calls upon a customer. Indeed, he may make many calls before he obtains his object, but patience and perseverance, coupled with the qualities I have already recited, are bound to produce results in the end. Patience with a man's failings is not so easy to acquire; in fact patience generally is not a common quality in man, but it can be cultivated and should be made a part of a salesman's qualifications.

CONSUMPTION CONTINUES AT FAIR RATE.

Cleveland, O., March 26th.—The Iron Trade Review to-day says:

Consumption of pig iron and finished materials continues at a fair rate, but new buying is extremely light, and it is evident that unless conditions improve soon many mills will be compelled to close entirely or curtail operations. The most discouraging feature at the present time is the almost entire absence of anything to indicate that improvement will set in at any time in the near future.

Prices of pig iron are being firmly maintained in the north, but in the south, there is considerable weakness. Buying by agricultural implement manufacturers and railroads continues very light.

"THAT TIRED FEELING."

The mood of the financial community at this particular period of the year, is rather apt to resemble the physical conditions of the community at large, in the same season. It is the last of a prolonged and tedious winter season; the vitality of the individual has reached low ebb for the twelvemonth. In much the same way, the natural activities of trade, finance and industry are moving at their slowest pace. It is the end of one season, and the other has not yet begun. An atmosphere of something like weariness surrounds us. In the affairs of general business, as in the every-day actions of people who participate in it, slackening energy and want of initiative are the familiar characteristics.

It would not seem unreasonable to ascribe to these well-known facts at least something of the despondent state of mind into which Wall Street, and with it a good part of the business community, has lately fallen. Whether that mental condition does or does not have a bearing on what is legitimately to be expected for the future, may doubtless be debatable; but what is hardly open to debate is the fact that some such mood always descends on the financial community at about this time of year.—Evening Post, (N.Y.).

Methods of Retailing Paints and Varnishes

A Waste of Advertising Material

An Observant Paint Traveler Finds That Some Retailers Make Poor Use of Advertising Material — Methods Adopted by a Successful Paint Retailer.

A PAINT traveler recently drew the attention of Hardware and Metal to a practice which is prevalent among some hardware merchants. He stated that it was not uncommon to find expensive color and display cards, enameled signs, etc., nailed up in rear warehouses, and very often in stables. He cited one instance in which he was particularly interested. Some time ago the firm he represents sent out a large number of expensive metal signs for the hardwaremen to use in drawing attention to a certain paint product which is sold in many stores. He found that a great many of the retailers in his territory did not take the trouble to have the signs put up. One merchant took him out to the stable to see a new horse which had been purchased for delivery purposes. On looking around the interior of the stable, the traveler was surprised to see nailed on the wall, along with many other advertising signs, the metal sign issued by his firm. When the sign arrived at the store the driver had taken charge of it, and used it for helping to decorate the interior of the stable. Conditions of this kind are to be regretted, and no doubt merchants who are as careless or thoughtless as this one are in the minority.

Despite the fact that advertising matter is being used to better advantage today than it ever has been in the past, there is still a large amount wasted. Merchants do not relegate advertising matter to the waste basket intentionally. It is generally thoughtlessness that is at the bottom of this waste of valuable advertising matter.

The only manner by which the retailer will get the best results, from the advertising matter which he receives from the manufacturer, is to have a regular system of distribution.

If used properly, circulars, color cards, road signs, etc., will bring business to the retailer. I know of one retailer who receives advertising matter in the same manner as he receives regular stock. The receiving clerk keeps a record of all advertising matter received. The matter is then passed on to another clerk, whose duty it is to see that the cards, etc., are properly distributed to customers. Color card racks are always kept filled, and circulars for distribution to customers are placed in convenient places on counters, within easy reach of clerks when they are wrapping up parcels. When an assortment of road signs arrives they are sent out immediately, and put up at prominent places along the main roads leading to the city.

Window displays are always kept intact, and after once being used are put in safe keeping for future use. This dealer gets excellent results from his window displays and other advertising matter, and many sales are made as a result of the good use to which the dealer puts all free advertising matter which he receives from the manufacturer.

Paint season is now here. Large quantities of advertising matter have been sent out during the past few weeks by manufacturers. What have you done with yours? Have you made good use of all the large posters which have been sent to you? Have you a system whereby all the color cards will be distributed judiciously? Do your clerks realize the value of color cards and the cost of production? In last week's issue of Hardware and Metal an illustrated article appeared showing the care and expense to which paint manufacturers go in preparing advertising material. They deserve your co-operation. With the proper distribution of color cards and other advertising material business is sure to follow, and with the business comes profits for the retailer. Color cards, if used properly, will pay good dividends, but if not used in the proper manner, they represent a loss not only to the manufacturer, but also to the retailer.

PAINTING IS CLEANLINESS.

Often the dealer overlooks one of the essential points about painting or varnishing—its cleanliness. Isn't it a fact that too much attention has been given to paint or varnish beautifying, and not enough to its being a sanitary covering? Take a floor in a kitchen that is in daily use and supposed to be kept immaculate, but is it? Just start to varnish or paint it immediately after it has been scrubbed if you will, and what will you find? Dirt. Any painter or person who has ever had personal experience knows this, so why would it not be a good plan to make a few temporary changes in advertising and selling methods?

The dealer can get considerable good out of some local advertising, built on this subject. Take laundries, they advertise cleanliness; why not the paint and varnish dealer? Of course, it can't be the same copy as applied to cloths, but it can be arranged for floors, walls, woodwork, furniture, etc.

In the first place, there is the subject:—Around it should be built advertising copy and illustrations about paint and varnish being sanitary. One suggestion is a window display, showing a well varnished floor, with some freshly-enameled chairs, a varnished table, then a figure of a woman in a neat house dress. Small cards could be used to illustrate different points made by the display which would really be short talks about paint and varnish creating cleanliness as well as preserving and beautifying.

The question of local store service, prompt delivery, quality of goods, etc., could all be omitted. These have been emphasized in many ways in the past. The point now to be discussed is that paint and varnish make for clean, healthy homes. With the spring housecleaning season approaching, no better time than the present will ever present itself.

Get the spirit of paint—varnish and cleanliness. Talk it to the store salesmen and see how much good it will do towards increasing the spring paint and varnish sales.—Paint and Varnish Record.

SELLING AT COST.

Unless you know what each separate line in your store is doing, you are not running your business on a scientific basis, and probaly not a paying basis, either. The merchant who tries to meet the prices on every other man's leaders will probably have occasion at inventory time to wonder just what he has received for his year's work.

Trade Insurance

The safest policy for the Retail Merchant to adopt is to insure his trade and a continuation of their patronage by selling them goods with a known reputation for quality.

Full value goods, backed by forceful advertising, means successful selling. It's the cumulative effect of satisfied customers that builds business—cumulative in sales and profits.

The effectiveness of Martin-Senour advertising insures a steady demand for Martin-Senour Paints and Varnishes. The quality service of every product insures satisfaction to every customer, and widens the way for continuous profit for you, compounding year by year.

Have us show you why Martin-Senour Paints and Varnishes will satisfy more people more of the time than any other make. Have us explain our policy of trade insurance and the sales co-operation rendered to each Dealer-agent.

Berry Brothers' Varnishes Bring Dealers Steady Profits—Pleased Customers—Bigger Business

EVERY hardware dealer who handles Berry Brothers' celebrated architectural varnishes is enjoying all these advantages. Every dealer who does not sell Berry Brothers' varnishes is missing the profitable business that would result from our splendid reputation among architects, house owners, builders and contractors, painters, decorators, and every one who uses or knows about varnishes.
56 years of careful, scientific manufacturing—56 years of steady, substantial growth—and a splendid reputation for quality of product and straightforward business dealings—these have assured the loyalty and prosperity of our dealers and the satisfaction of our dealers' customers.

Our advertising has made the name Berry Brothers almost a household word—it has thoroughly familiarized varnish users with Berry Brothers' products and the multitude of uses to which they may be put. More than that, our consistent publicity brings customers into the stores of our dealers and, besides directly increasing their business, makes it steady and certain.

Public Recognition of Berry Brothers' High Standing of Immense Benefit to our Dealers

Because of the enviable position that the Berry Brothers Company holds in the business world and its high standards of commercial integrity, it has been selected as a member of the Rice Leaders of the World Association. This is an honorary organization founded upon the highest principles of business, to develop business honor in America and the markets of the world, and to demonstrate to the public the high and worthy standing of its members.

Berry Brothers' membership in this organization means world-wide recognition of the high quality of its products. It represents a dealer-help of inestimable value. It means better business, bigger profits, and greater prestige for every Berry Brothers dealer.

A Varnish for Every Need

Our dealers can meet every demand that varnish customers may have. Berry Brothers' finishes are adapted to practically every use. Here are four of our principal products:

Liquid Granite—A wonderfully durable varnish for floors, linoleums, oilcloth, etc.

Luxeberry White Enamel—A white interior finishing—that stays white. Ideal for stairs, hallways, bathrooms, also for white furniture.

Luxeberry Spar (It's Waterproof)—For marine uses and all kinds of outdoor finishing exposed to the weather. Will not check, crack or turn white.

Luxeberry Wood Finish—For the finest rubbed (dull) or polished finish on interior woodwork.

If you are not now selling our products, our booklets will tell you more fully about Berry Brothers' Varnishes. We can show you how handling these finishes will mean better business and valued prestige to you. Write us at once regarding our dealer proposition.

Weekly Market Report---Paints

MONTREAL.

MONTREAL, Mar. 25.—There is the same steady and strong feeling in the market and shipments are quite heavy in the prepared paint lines. All through the country the demand for paint is even heavier than it was for the corresponding period of one year ago. The shipping departments are working to capacity in order to get the orders out.

Collections are in much the same condition as they were one week ago. The greater portion of the money now seems to be in the country while the city men are claiming poor collections. This, however, will show improvement as soon as the spring weather sets in properly.

White Lead.

There is the same feeling in the market this week as has been reported lately. The market is quite steady at the following quotations. Ton lots, $8.05; less than ton lots, $8.25, while open prices are given for orders of larger quantities.

Linseed Oil.

The market is still quite steady and the quotations which were given last week are still in effect. The demand is unchanged.

1 to 4 barrels	60c. per gal.
5 to 9 barrels	59c. per gal.
10 to 25 barrels	58c. per gal.

Boiled Oil—

1 to 4 barrels	63c. per gal.
5 to 9 barrels	62c. per gal.
10 to 25 barrels	61c. per gal.

With open prices for carload lots.

Prepared Paints.

The demand for immediate shipment is becoming more pronounced each week. The quantity of paint being shipped at present is said to be even greater than last year, which was reported by all the manufacturers as being a record one.

Glass and Putty.

There is nothing to report in this market. Glass is still quoted at a discount of 33 1-3-5% off base price. The demand is still quiet.

Putty quotations have not changed during the week and are still given as follows. The demand is quite light.

Bulk, in casks....$2.30 per 100 pounds.
Bulk, in drums... 2.50 per 100 pounds.
Bladders in barrels 2.80 per 100 pounds.
With the usual advance of 70 cents per 100 pounds for pure putty.

Turpentine.

There is still quite a firm feeling in the market this week and conditions are much the same as one week ago. The demand is seasonable.

Gasoline.

The demand is picking up a little each week, and will continue to do so from now on, as the roads are getting better, and that means more gasoline. The same prices are in effect.

25½c. per gallon in wood, 22½c. per gallon in steel and drums, while local tank wagon price is 21c. for 100 gallons and over.

Benzine.

The demand is possibly picking up a trifle, although not very heavily. The demand is quite steady at all times, although the spring will see a little freer movement in this line. The following prices are still in effect.

Barrel lots in wood are quoted at 23 cents per gallon, in steel and drums 20 cents, while local tank wagon price is 19 cents per gallon for 100-gallon lots and over.

TORONTO.

TORONTO, March 26.—With the continued mild weather there is an improvement in the paint business and spring lines of paint are moving freely. Retailers report that stocks are beginning to move and one or two of the larger firms have already sent in good sized repeat orders.

There is every reason to believe that spring business with retail hardware merchants, as far as ready mixed paints are concerned, will be equally as good or even better than last year. Booking for spring delivery was heavy and repeat orders are coming in already. No price changes have occurred during the past week.

Linseed Oil.

There is a seasonable demand for linseed oil and some dealers who refused to buy some time ago are now coming into the market. The following prices are still in effect:—

Raw—

Single barrels	65c.
3 to 5 "	63c.
6 to 9 "	61c.

Boiled—

Single "	68c.
3 to 5 "	66c.
6 to 9 "	64c.

Oil in less than barrel lots 7 cents per gallon. Cans are charged for—5-gallon, 50 cents each, and 10-gallon, 75 cents.

Turpentine.

Turpentine quotations remain the same as last week and quotations are as follows:—

Single barrels, 69c Imp. gallon.
2 to 4 barrels, 68c Imp. gallon.
5-gallon lots, 76c gallon.

White Lead.

Lead quotations remain unchanged. The fact that lead has remained firm for such a considerable length of time is causing some dealers to wonder if the present prices will continue. There is no indication of an immediate change and quotations remain as follows:—

5-ton lots, $7.90 per 100 lbs.
1-ton lots, $8.20 per 100 lbs.
Less than ton lots, $8.40 per 100 lbs.

Prepared Paints.

Prepared paints are moving in a very satisfactory manner and indications point to a large volume of spring business in this line. As the spring advances and the weather becomes milder the demand for ready mixed paints will become more pronounced.

SHEET METAL PROBLEMS.

(Continued from page 39.)

the student has gone through. The principle is the same as 2 and 3-piece elbows and serves to illustrate the different shapes assumed by the pattern for different turns and angles.

Problem 7, plate I, illustrates a pipe butting against a slanting surface and is called a butt-mitre, and is developed the same as explained in the development of a square elbow.

The plan Fig. 1, is drawn, then the elevation Fig. 2, then the stretchout N M, is laid out at right angles to the line A B.

Divide the plan off into equal spaces and carry the points to the slanting surface O P, and then to the corresponding measurement lines, the pattern is then developed for the section A B C D.

It does not matter what the shape of the surface O P is like, or the shape of the pipe or moulding. The principle of developing a butt-mitre is the same. The pipe or moulding is divided into smaller spaces for irregular surfaces.

Problems 8 to 13, plate 2, are examples of butt-mitres, and are, as before mentioned, developed the same as explained for problem 7.

We Are Helping You Sell More B-H Products During 1914

than ever before, by carrying out the biggest advertising and selling campaign we have yet planned.

The campaign includes selling helps of every class, indoor and outdoor signs, posters,, etc., newspaper and farm journal advertisements in the leading organs throughout the Dominion; a complete line of folders, color cards, etc., suitable for mailing or distribution over the counter; a splendid "Consumer Booklet" that goes right home to the user in a convincing way; a Counter Book (one of the most expensive pieces of paint advertising ever produced) and a House Organ to our Agents, in which everyone can have a chance to say what he thinks about the business.

All this is done, so far as possible, in the name of the dealer. It is a "Dealer's Campaign" throughout, and is bound to prove a tremendous selling force for dealers who handle B-H products.

B-H "ENGLISH" PAINT

made according to this formula, for all paints that can be made on a white base—

70% Brandram's B. B. Genuine White Lead

30% Pure White Zinc

Ground in Pure Linseed Oil

is, as always, the leader.

This paint, which has proved its worth, will have back of it the full force of our campaign. Its excellent qualities—its endurance and beauty—put it in a class by itself as a trade builder, and by taking advantage of our selling helps and giving B-H "ENGLISH" the prominence it deserves, you can put yourself in line for bigger sales and bigger profits.

Full details yours for the asking.

Montreal Halifax St. John Toronto Winnipeg

Current Hardware, Metal and Paint Quotations

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figure being for large quantities and prompt pay. Large buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

The P&L Spring Advertising is Hitting Hard in Your Town

BANG! Bang! The cannon are roaring, the bombs are bursting — the big Pratt & Lambert Spring Advertising Campaign is in action. Your town is the scene of action. Already word comes from the firing line: "We have met the varnish buying public and they are ours." Individual consumers, home-builders, painters, architects and contractors — every class to which varnish is sold are yielding to the mighty persuasive force of "Pratt & Lambert Advertising," and are buying Pratt & Lambert Quality Varnishes. Study the bursting bombs and you'll know why.

Are *you* getting this business in *your* town?

Write for the Pratt & Lambert Dealers' Proposition.

MURESCO

"For Twenty Years the Leading Wall Finish"

ACCEPTS CHALLENGE .:. .:. .:. $100.00 FORFEIT

We understand that certain Kalsomine manufacturers are making the statement that their Kalsomine will cover more surface, pound for pound, and cover it better than MURESCO. If by buying a quantity of their goods and MURESCO on the open market and having two master painters—who may be selected by both parties—test them out, they can prove above statement, we will pay $100.00 to Sick Children's Hospital.

How is your
Paint Up, Clean Up, Campaign Progressing?

Have you started it going in your town yet? An immense boost to this can be had by interesting your Clergy. They will be quick to see the moral effect of cleanliness in your community if you put it up to them.
"Cleanliness is next to Godliness" they say, and there is the meat for many a sermon in a text of this nature.
It's a movement that should receive the support of every church—You can get the support with a little effort and proper approach.
We will gladly outline a campaign for you on request.

G. F. STEPHENS & CO., LIMITED

Paint and Varnish Makers

WINNIPEG Branch at Calgary

Why not be in line this spring with the brand of paints that makes every paint customer enthusiastic about results?

JAMIESON'S PURE PREPARED PAINTS

are this kind and are made to bring repeat orders—the only kind that puts real profits in the dealer's pocket. Once a can is sold, the subsequent orders come unsolicited.

We want you to be our agent.

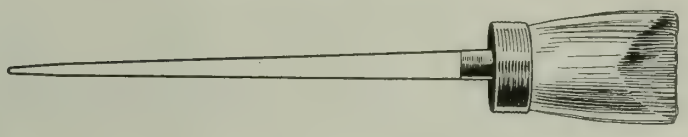
RAMSAY'S PAINTS & VARNISHES
SATISFIED CUSTOMERS APLENTY
YOUR PERFECTLY GOOD PROFIT

That's a pretty good line up, and you can't do any separating—those three always stick together.



More than 70 years ago Ramsay's started to make good paint, they kept it up, and now the Canadian public know it.

Any man who comes into your store for paint and gets Ramsay's will come again when he wants more, because every brush of paint out of the can helps to write a good advertisement for Ramsay and for you.

DON'T GO TO THE TROUBLE OF MIXING YOUR OWN PAINT

BUY CANADA PAINT. It saves you all the preliminary fuss and bother, and guarantees you a good job and the thorough protection of your property against the wear and tear of the weather.

YOU DON'T HAVE TO WORRY

YOU don't have to experiment to know which is the best paint to use.

John Smith & Co.
HARDWARE, PAINTS AND OILS
AGENTS FOR
CANADA PAINT

ARE YOUR BUILDINGS IN A SHABBY UNPROTECTED CONDITION FOR WANT OF PAINT

DO you realize that their lack of paint protection is even more serious than their shabbiness?

Lumber not protected from the weather soon cracks and checks and a building that should be good for more than a century, if properly painted, goes to rack and ruin in a quarter of that time.

The use of paint is an economy because it protects lumber, iron and the other materials of which buildings are made, from the wear and tear of the elements, and decay and rust. In addition to this it vastly improves the appearance of property to keep it well painted, and three per cent of the value of the building spent in paint adds fifteen or twenty per cent to its market value.

...me and see us about paints. We sell and recommend Canada ...as there is no purer or better made paint on the market.

John Smith & Co.
HARDWARE, PAINTS AND OILS
AGENTS FOR
CANADA PAINT

IF YOUR BUILDING NEEDS PAINT PAINT NOW

PAINT, that is, *good paint*, is an investment, not an expense.

It protects the materials of which your house, or barn, or other buildings are built, from the wear and tear of the weather. It improves their appearance and so adds greatly to their market value.

When you buy paint buy the best the market affords. There is no economy in painting with a cheap paint. A good paint at $2.50 per gallon that will last five years or longer, is much more economical than a cheap paint at $1.50 per gallon that will only last for a couple of years. The former gives you your protection at 50c a year per gallon, the latter costs you 75c a year per gallon and at the end of two years you have the whole expense of repainting or the leaving of your buildings in a shabby unprotected condition.

IF WE COULD TAKE YOU THROUGH THE FACTORIES OF THE CANADA PAINT CO.

Newspaper ads that will help you build profitable business in CANADA PAINT

John Smith & Co.
HARDWARE, PAINTS AND OILS
AGENTS FOR
CANADA PAINT

Newspaper advertising in the Spring goes a long way toward making your paint trade the most profitable part of your business.

The ads. shown on this page give an idea how The Canada Paint Co. will help you in your Spring paint advertising. Electros of these attractive ads. have been prepared, with a place left for your name to be set up.

When a property owner in your vicinity has read a series of these ads. in your local paper, he will see why it will pay him to paint his buildings. He will be familiar with "Canada Paint," and the fact that you have the Agency in your town. If you run these ads. you may be sure more business will come your way.

The Canada Paint Co.'s Representative will gladly explain this newspaper campaign to you, but it is only a part of the aggressive proposition The Canada Paint Co. have worked out to enable CP Agents to make their paint department the most profitable department in their store.

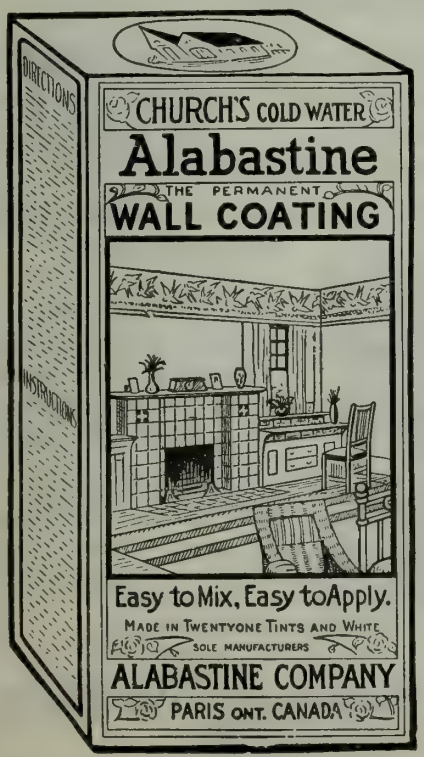
More and Quicker Turnovers!

That's the Shrewd Dealer's Answer to the Problem of Rising Costs of Doing Business. Turn Your Money Over Oftener. Ally Yourselves With Manufacturers Who Best Help You Do This.

Scores of hardware dealers who have had the wisdom to link up with Lowe Bros. are making more money to-day out of their paint department than ever before in their business careers. And this in the face of increased business expenses all along the line—higher wages, higher rents, higher personal expenses, etc. Why is this?



Simply because under our methods they are able to turn their stock over oftener, to sell more paint, with the same equipment in less time, at maybe better prices than they need to do. More than that, we lift two-thirds of the selling work off our dealers' shoulders, leaving him only one-third and backing him with real sales co-operation that makes him practically a partner in our business and we in his. For a real business proposition write

The Johnson Paint & Varnish Co., Limited, Vancouver, B.C.

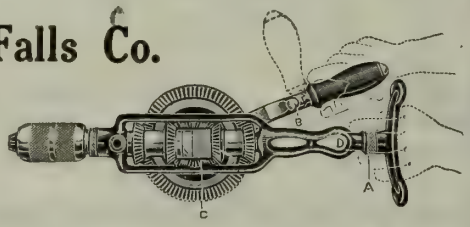
We Are Pushing Our New

BREAST DRILL

No. 87

BECAUSE it comes nearer perfection than any other drill we have ever made—has more adjustments and variations in action than any other drill, yet everything is accomplished without any sacrifice of power.



Can't tell you about it here—too much detail—but if you will send for Catalog No. 32, you will find it fully described.

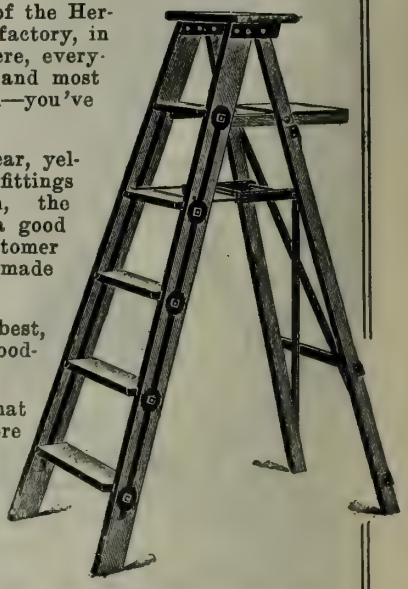
Take it broadly that it is an unequalled Breast Drill and send to us for the full story.

Millers Falls Co.

28 Warren St.

NEW YORK

Widely different



are the uses and users of the Hercules Step Ladder. In factory, in office, in home—anywhere, everywhere, where the best and most reliable ladder is wanted—you've got a prospect.

Beautifully made of clear, yellow pine, its malleable fittings finished in aluminum, the Hercules creates such a good impression on your customer that the sale is almost made at sight.

And because it is the best, it stays sold, and the goodwill comes to **you.**

Also the profit—but that we'd like to tell you more fully about!

Write us.

The Stratford Mfg. Co., Limited

Stratford Ontario Canada

Represented by: British Columbia—Martin, Finlayson & Mather, Ltd., Vancouver. Alberta—Tees & Persse, of Alberta. Maritime Provinces—J. H. Hanson Co., Montreal. Quebec—Jas. S. Parkes, Montreal. Ontario—Roy E. Harris, Stratford.

Practically all the Manual Training Schools in Canada Use Our

High Quality Tools

We make a full line of fine Beveled Edge Tang and Socket Chisels, Pattern Makers' Chisels and Gouges, Turning Tools, etc.

You cannot find a more complete assortment of **carving tools** on the continent.

Dealers can make a big profit by handling this line. Ask for catalog.

BUCK BROTHERS

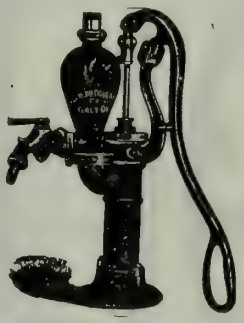
Millbury, Mass., U.S.A.

There's a place for Everything

So goes the old proverb and it certainly was never so true as when applied to wire cloth. Awkward to cut, awkward to unroll, wire cloth can never be efficiently handled except on a **Bowser Wire Cloth Display Rack.**

The "Bowser" gives you a neat, convenient place to keep your wire cloth, where it is out of the way, yet easy to see and easy to get at.

Inaugurate a new period of store efficiency by writing for prices now.



R. M. Bowser & Son

Dept. A. **RENFREW, PA.**

MAKE MONEY FROM GOOD PUMPS—PROFIT

Unless a metal pump is made just right it will leak at joints or valves.

"Aremacdee" pumps do not give dealers who sell them trouble and loss from defective service in "Aremacdee" pumps sold customers.

Pumps for every use—hand or motor—force or lift—every type a dealer can sell.

All in the big catalogue. Ask for it—for dealer prices—for dealer terms.

The
R. McDougall Co., Limited
GALT, CANADA

Build Up a Profitable Fence Department!

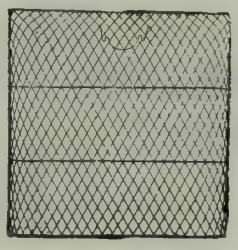
Handle a line of fencing that does not serve only as a mere boundary line, but one that gives real fence service—one that is built strong enough to withstand the onslaughts of stock as well as the ravages of all kinds of weather. Such a fence is

Peerless Fencing

You can sell this fence with a clear conscience. You can guarantee that **Peerless** goods will give full satisfaction. We will stand right back of your guarantee, whether it be in farm fencing, poultry fence, ornamental fence, gates or any other lines we manufacture, our policy is to satisfy every customer if at all possible to do so. **Peerless** fencing is well advertised through farm papers or other mediums. It is a line that is easily sold. Having an agency for **Peerless** will sell other goods for you.

It's Made of Heavy Open Hearth Steel Wire

with all the impurities burned out and all the strength and toughness left in. Heavily galvanized. Every intersection is locked together with a Peerless clamp. Top and bottom wires of Peerless Poultry Fencing are extra heavy—extra strong. Consequently fewer posts are required. **Peerless** fencing can't sag—can't rust—can't get out of shape—can't help giving absolute satisfaction.



For 30 days we will accept dealers' orders for our PEERLESS Farm Fencing and Gates at a special reduced price. Write for further particulars to-day.

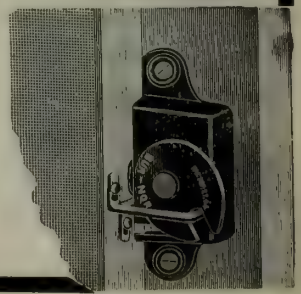
FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace—made for Machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

No. 3-A—Open



Bur-Nor Screen Door Catches

Will add materially to your profits during the spring and summer seasons, if you give them a chance.

They prevent sagging, warping or rattling. Made in two styles, plain and with positive locking attachment. Has adjustable staples, simple to attach, positive in action.

We will gladly send you prices and circulars.

No. 2-A—Shut

BURGESS-NORTON MANUFACTURING CO.

GENEVA, ILLINOIS, U. S. A.

The Taschereaus

A family in Canada that has given five judges to the Bench, an Archbishop and a Cardinal to the Church.

The Businessman of to-day is perhaps so engrossed in his multitudinous cares of the office that he depends on his magazine to keep him posted about the big things outside his orbit. MacLean's for April exactly fills the bill.

In the article on the Romance of the Taschereaus, a striking pen picture of a French-Canadian family is given by W. A. Craick. An introduction is given by a quotation from the utterances of Sir Wilfrid Laurier. The illustrations are good. It is said that the blood of this family flows through the veins of stalwarts in every Province of our land. The whole story is most interesting.

THE BUSINESS OUTLOOK.

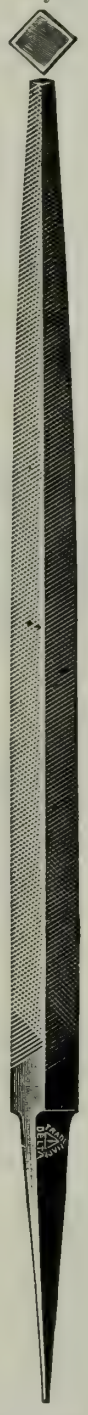
Besides this, the article on the Business Outlook by the associate editor of the Financial Post gives in a terse, interesting way the trend of business during the present time of slackened industrial activity. How can Parliament do its part in the lifting of the brakes?

Other articles of exceptional interest, all well illustrated, are:

Royal Military College Training.
Schultz and Strathcona.
Tunnelling Mount Royal.
Margaret Anglin—Canadian Actress.
Wealth of Blackfeet Indians.

Stormy Petrel of German Press, and a wealth of information in the Review of Reviews.

Send your name and address and have your name added to our subscription list. Address Dept. "M."



Subscription Price $2.00 a year, twenty cents a copy.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOMESTIC ELECTRICAL WORK, BY WILliam A. Wittbecker. Concise and Practical Explanation for Plumbers and Hardware Dealers, on How to Wire Buildings for Bells, Alarms, Annunciators, and for Gas Lighting From Batteries. The information given is practical, and with a close observance of the directions laid down, any one, though entirely ignorant of electricity, should be able to do the work described. Illustrated with 22 diagrams. Price, in paper, 25c post paid. Price, in cloth, 50c. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 250 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business, Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10 postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

MEN WHO SELL THINGS. BY WALTER D. Moody, Business Manager of the Chicago Association of Commerce. An indispensable book for merchants, manufacturers, employers, salesmen and all who have goods of any kind to sell. The author forcibly sets forth such themes as how to approach men; how to create and develop the compelling personality, the genial address, the engaging presence of the energetic business-getter; how to attract, convince and sell a prospective customer under adverse conditions; how enmity may be turned into friendship, interest into desire, curiosity into sales, and sales into permanent custom. A few of the subjects discussed are: Right Kind of Salesmen: Specializing Efforts; Letters to the Trade; Getting the Price; Retail Salesmen; Sales Manager, etc. 205 pages. Price $1.10 postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

A want ad. in this paper will bring replies from all parts of Canada.

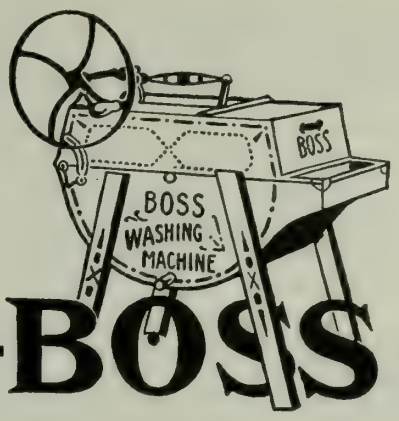
Housewives Want An Easy-Running, Strong and Serviceable Washer

The "THERMO"

Fills The Bill And Pays A Good Profit

This washer is as easy to operate as a bicycle, the power being applied much the same way. Can be used with either the forward motion or up and down motion, simply by changing the lever. The two lever rachets make this possible.

The **Thermo Washer** is built to wear and is solid and substantial The tub is extra heavy and constructed in the best manner.



Legs are cross braced and absolutely rigid. Top is made double to prevent warping. The few working parts are simple and are not liable to get out of order.

Write for complete description. This washer wins trade.

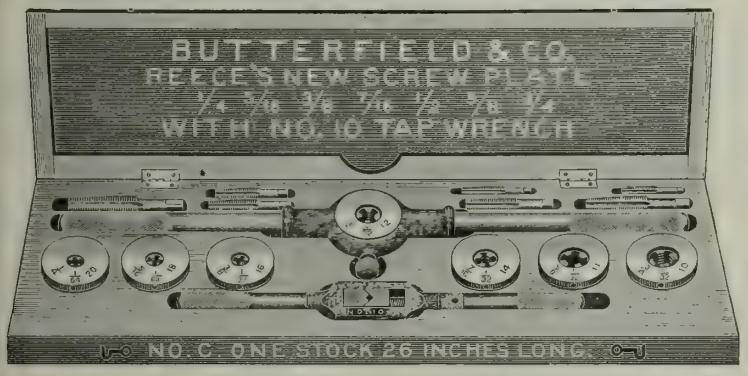
BOSS

No. 23



the efficient washer for the efficient dealer—will sell well at any time, will satisfy your customers. will bring you a good profit and an increased goodwill. The "Boss" is made throughout of Louisiana Red Cypress—the wood that grows in water—the wood that will not warp or split; its internal mechanism is remarkably strong, every part being designed to give long, active service.

Be efficient—get this efficient washer back of you. The results may be a surprise, but they'll be a pleasant one.

Write for prices to-day.

Books for the Metal Workers

Any of the following books sent prepaid on receipt of price

WRITE FOR CATALOGUE

THE NEW METAL WORKER PATTERN BOOK.

A treatise on pattern cutting as applied to all branches of sheet metal work. By George W. Kittredge. 430 pages; 774 illustrations; size 10 x 13 inches. Cloth bound. Price $5.00.

ART OF COPPERSMITHING.

A practical treatise on working sheet copper into all forms. By John Fuller, Sr. 327 pages; 474 engravings; size 10 x 6½ in. Cloth bound. Price $3.00.

SHEET METAL WORK.

A manual of practical self-instruction in the art of pattern drafting and construction work in light and heavy-gauge metal, including sky-lights and roofing, cornice work, etc. By Wm. Neubecker. 267 pages; 358 illustrations; 6½ x 9¾ inches. Half-Morocco binding. Price $3.00.

A PRACTICAL WORKSHOP COMPANION.

For tin, sheet iron and copper plate workers. By LeRoy J. Blinn. 296 pages; 170 figures. Size 5 x 7½ inches. Price $2.50.

SHEET METAL WORKERS' INSTRUCTION.

By Joseph H. Rose. 300 pages. Profusely illustrated. Price $2.00.

THE ROOFING, CORNICE & SKYLIGHT MANUAL.

175 pages; 170 illustrations and 13 plates; size, 6 x 9½ inches. Cloth bound. Price $1.50.

BAUGHMAN'S BUYER & SELLER COST TABLES.

A cost book for everybody having cost to figure by the piece, pound, foot or ton, from 2½c per hundred to $10 a hundred. Leather bound. Price $1.50.

TINSMITHS' HELPER & PATTERN BOOK.

With useful rules, diagrams and tables. By H. K. Vosburgh. A new revised edition; 120 pages; 53 figures; size 4½ x 6¾ inches. Cloth bound. Price $1.00.

TWENTIETH CENTURY SHEET METAL WORKER.

By H. E. Osborne. Gives short, concise explanations which should be easily understood by the young apprentice, and are sufficiently scientific for the practical use of the journeyman. 86 pages; size 5½ x 7¾; illustrated. Cloth bound; Price $1.00. Paper Cover; Price 60c.

PRACTICAL METAL PLATE WORK.

By Paul N. Hasluck. 247 illustrations; 160 pages. Price 75c.

TREATISE ON THE GEOMETRICAL DEVELOPMENT OF ROUND AND OVAL CONES.

With easy examples of their application. For the use of beginners and practical sheet-iron and tin-plate workers. By John Fuller, Sr. 52 pages; 37 figures; size 4½ x 6¾ inches. Cloth bound. Price 75c.

MENSURATION FOR SHEET METAL WORKERS.

As applied in working ordinary problems in shop practice. By W. Neubecker. 51 pages; 70 figures; 5½ x 7¾ inches. Cloth bound. Price 50c.

TABLES GIVING THE LENGTH OF BARS FOR SKY-LIGHTS, AND RAFTERS FOR ROOFS.

84 pages; bond paper; handy pocket size. Cloth bound. Price 50c.

METAL WORKER SHOP CARDS.

Made of Manilla Board, 11 x 14 inches; eyeletted for hanging up in the shop. Each, 25 cents; Per set, 60 cents. This set of useful cards now consists of three numbers, as follows: No. 1—Table of the quantity of tin required for roofs. No. 3—Table of the Diameters, Areas and Circumferences of Circles. No. 5—Table of the Capacity of Cylinders in United States Gallons.

EASY LESSONS IN ROOF MEASUREMENTS.

By W. Neubecker. Twelve lessons on figuring the amount of material required to cover a given surface in flat, hipped or irregular shaped roofs. 31 pages, 5½ x 8 inches; 12 illustrations. Paper cover. Price 25c.

HOUSE CHIMNEYS.

A series of articles on chimney troubles and their remedies. 62 pages; 5½ x 8 inches; 40 illustrations. Paper cover. Price 25c.

ARE YOU THE MAN AT THE HELM?

Are you running your ship of business along the shortest and safest course to the harbor of success? Or are you going a roundabout way, scratching and scraping along the rocks of loss and failure.

Get in the right course, be on the lookout for new thoughts, ideas, schemes, etc., and you will have a successful run.

STORE MANAGEMENT COMPLETE

is a guide that will show you how to get the maximum trade and profit out of your busines. This book is written by Frank Farrington (a companion book to "Retail Advertising Complete.") It tells all about the management of a store. The following is a synopsis of one of the chapters:

CHAPTER V.—THE STORE POLICY—What it should be to hold trade. The money-back plan. Taking back goods. Meeting cut rates. Selling remnants. Delivery goods. Substitution. Handling telephone calls. Courtesy. Rebating railroad fare. Courtesy to customers.

"Store Management—Complete" is bound in cloth, contains 272 pages, 16 full-page illustrations, and 13 chapters. $1.00 brings this book to you postpaid. Money refunded within 10 days if not satisfactory.

TRADE S.W. MARK

STANLEY

WROUGHT STEEL

Screen Door Hardware

COMPLETE SETS
IN CONVENIENT PACKAGES

Set No. 1750.

Set No. 1750 is made up of one pair of 3x3 ornamental, loose-pin butts to screw on the surface of the door; one five-inch wrought steel pull; one high-grade No. 3 spring, of much better quality than is usually used on screen doors; one gate hook and eye. Each set is packed neatly in a neat, strong, telescope carton, with screws of the proper size and finish, ready to be handed to the customer.

These sets are finished handsomely in Japan, Antique Copper, Dull Brass, or the Rust-Proof "Stanley" Sherardized finish.

A less expensive set, No. 1752, is also put up with 2½x2½ butts, and a No. 2 Spring. It is made of good materials, handsomely finished, and is fully equal to other sets on the market.

Send in your order for Stanley Screen Hardware, and be prepared for Spring business. Write us, if your jobber cannot supply you.

The Fixed Star of Courage

If a future and greater time develops a superman it will be because courage drives fear from the brain and creates a character that will never give up, but will keep fighting until the world is forced to give in.

¶ Most men are cowards, timid, vacillating, afraid of criticism, afraid to go ahead and get things done. The only devil which now exists is the devil of fear, all other demons having lost both horns and tails. At the point in time where we now are, fear is about the only thing that stands between a man and success.

¶ A few days ago a carrier pigeon that had been shipped from Manchester, England, to the city of Toronto, Canada, escaped and twelve days later showed up one morning at the old stand. Had this pigeon realized or studied the uncertainty of a twelve-day flight across the Atlantic such a trip would never have been accomplished.

¶ The courage and fearlessness of this tiny carrier pigeon, flying in the face of wind and storm, in the face of danger from other birds, flying continuously, perpetually for twelve days without food—back across the sea—is a lesson to every man who is looking for an easy job—satisfied to settle down to an eventless, colorless, meaningless existence.

¶ It is courage that will produce the superman of a future and greater time, and the man who drives fear from the brain, who succeeds in washing the yellow streak from his physical and mental character will never give up, but will keep fighting until he forces the world to give in.

¶ It is true that the ambition and courage that abounds in youth makes it possible for a young boy between the ages of twelve and twenty to attempt things he would under no circumstances undertake at a more conservative and at a better-balanced period in life.

¶ Stephen Girard, with one eye deformed, laughed at, mistreated, driven from home by his stepmother at the age of twelve, hiding himself in a merchant vessel starting away to the Indian Ocean, and finally becoming the greatest merchant and financier of his time, is the answer for every man who is about to decide that the 'game is not worth while.'

¶ During the first twenty years of his life, Girard had never known anything but adversity. His life had been filled with enemies and this made it possible for him to appreciate a friend. The Captain of this merchant vessel believed in Stephen Girard, took an interest in him, and from a copy of Voltaire's Philosophic Encyclopedia borrowed from the young Captain, Girard laid the first plans for a store of knowledge that made him one of the best posted men of his day.

¶ George Westinghouse, the inventor of the air-brake, was told by the president of a railroad that he had no time to waste with 'fools who talk about stopping trains with wind.' So if you have tried and failed; if you have planned and then stood by with sad and solemn face to see your plans go wrong—remember that great deeds, vision and a broad knowledge of life and men are the products of courage, and courage is born in the cradle of adversity.

¶ Success will never come by compromise. Your ideals and your purpose must be as fixed; must stand out as clear to you, as a star in the night.

Starrett Hack Saws

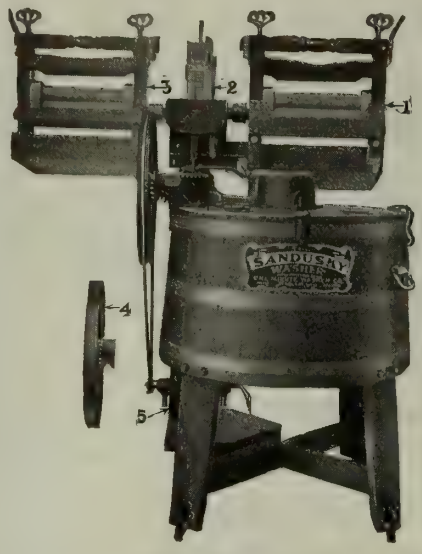
There is more money in a good line of hack saws than most hardware dealers realize.

Hack saws must be used by nearly every mechanic, while machine shops and factories dispose of a tremendous quantity.

The cost of these saws is not a small item and when any dealer can demonstrate that his line of hack saws will cut faster and last longer than those being used, he can rest assured of a steady trade.

Now the dealer who handles Starrett hack saws has a double advantage—he has the name Starrett to secure the first trial because everyone knows Starrett tools are the "Standard Instruments of Precision," and further he has the actual quality in the saws. So he can have the saws tried on the strength of their name and then they will make good on the service they give.

Starrett hack saws are made of special tungsten steel. The teeth are milled instead of stamped and the set is perfect for each kind of work. There are good sales waiting if you will just push Starrett hack saws.



Let us send you a copy of our big, new, free catalog No. 20MA which tells what saws to use for each kind of cutting.

Sandusky Power or Electric Washer

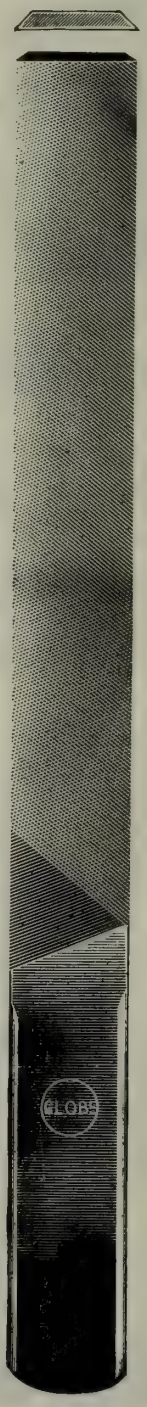
Here is a thoroughly practical Washer, one that will do a family washing right at home, under sanitary conditions and save from $1.00 to $3.00 each week, enough to pay for it in a short time.

Every Dealer who has stocked it has found it exactly as represented—first-class in every respect and a splendid seller.

Every woman is captivated by the way it starts automatically and by the perfect condition of the clothes and their snow-white cleanness after washing. You will find it

A Trade-Bringer

worth handling, because every woman who gets one recommends it and sends more customers to you.



One big selling point which takes with prospective buyers is the novel wringer device. It permits wringer to be started, stopped, reversed or swung to any position. And while the washing is going on, the wringer will wring from the rinse water to the bluing and from the bluing right into the basket. The construction of the entire Washer is the best possible.

Space won't permit full details, but if you'll write we send them and tell you about our Guarantee Certificate plan which helps you make quick sales. Our proposition is worth sending for. Don't neglect it.

MORRISON PLUMBING SUPPLIES

THERE is big profit on Plumbing and Brass Goods when the goods you sell—stay sold. And the customers come back for more. But the goods must have QUALITY.

There is only one complete line of Plumbing and Brass Goods made in Canada with a reputation for QUALITY all the way through, and that line is MORRISON'S.

J.M.T. Every article we manufacture has our J.M.T. trade-mark stamped on it. The trade-mark that means a GUARANTEE.

The James Morrison Brass Manufacturing Co., Limited

93-97 Adelaide St. W. **Toronto, Canada**

A Sign of the Age

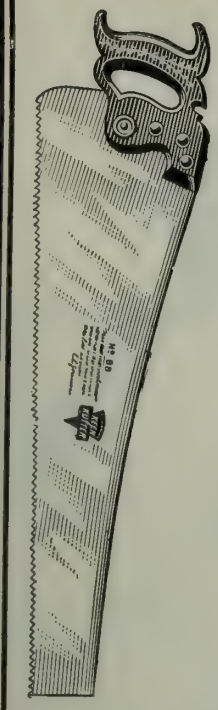
We live in an age of progress, of striving, of upward tendencies. And our architecture reflects this spirit—is the trade-mark of the age. To construct his giant buildings, man introduced steel into architecture. And to protect this steel against the ravages of fire, time, and atmosphere, he employs concrete.

This is just one of the reasons that has made the handling of

Rogers' Portland Cement

so very profitable. For concrete has become the 20th century building material for everything from sky-scraper to cottage.

Get in the concrete movement—right away. Become one of our authorized dealers.



Sell cement to the men who are building concrete structures in your locality. Tell them that you can save their hauling it half across the town, and they'll be mighty glad to give you their orders, because Rogers' cement meets the approval of their architects and engineers, **because Rogers' cement is standard.**

And we don't want you to carry a big stock either. We ship right to Mr. Builder, as fast as you tell us his requirements.

So don't delay. Write us to-day.

ALFRED ROGERS Limited, 28 West King Street, Toronto

A Sales Disaster

Suppose you had made a satisfied customer; suppose some commodity that you sold had put you way-up in his estimation. And suppose that he'd been coming to you for years for that one thing, when he took it into his head to buy something else, from you, as well.

Now isn't it only ordinary horse-sense, that the second thing must be as good as the first; must help to maintain, must tend to boost that reputation you've so carefully gained?

Otherwise—there would be a sales-disaster; otherwise all your careful customer-nursing would go for nought.

It's the same way with paint and brushes. You may have made a wonderful name for yourself through the dependability of your paint sales, but it is liable to be spoiled any time if you don't sell brushes as dependable as the paint.

That's the reason you should stock and push the MEAKINS kind. They have never been known to let a paint man down yet.

Write and let us tell you how profitable it is—preventing sales-disasters—the Meakins way.

Meakins & Sons, Limited, Hamilton, Ont.

Let the McCaskey Stop the Leaks!

Forgotten charges are one of the most prolific causes of profit leaks.

Little insignificant sums, they may be — each, but when you come to total them at the end of a year, you get a shock—and not a pleasant one either.

Put in a McCaskey. It is the surest way, to stop those little leaks, that has ever been devised. It makes forgotten charges an impossibility, because, the mere filling out of the McCaskey sales-slip makes a proper record of the transaction.

Mark and mail the coupon and get in line for leakless profits, now!

The Sun Never Sets on Disston Brand Goods

Once a similar phrase might have been applied to ancient Rome. Later it described the vastness of the widespreading dominions of the British Empire. To-day, it carries its full meaning as applied to Disston Products.

The mechanics and householders of the world know them. The great majority possess some Disston Saw or Tool. The fame of Disston Goods goes wherever civilization penetrates. Into the wilderness the explorer sometimes carries the handy Chain Saw. The lumberman clears the way for civilization with his Cross-cut Saw. The millman, with his Band and Circular Saws, converts the rough timber into commercial lumber. Then the carpenter arrives to use his Hand Saw in building habitations for the incoming settlers.

The various mechanical trades that follow, each find some Disston Saw, Tool or File to aid them. Even the surgeon who accompanies the settlers has his saws of delicate structure and special design from the Disston Works.

And so we find it—in new countries and old; in the United States, South America, or the far-away Chinese Republic. Wherever you go, you find that the name of Disston carries its message of quality and efficiency to all mechanical trades.

Iver Johnson's Arms & Cycle Works

350 River Street **FITCHBURG, MASS., U.S.A.**

The Lure of Skin Deep Quality

It is not what an article appears to be that finally determines its worth.

Its real value lies deeper than that.

It is not mere talking points that makes a commodity serviceable, but intrinsic merit — something real.

The Bissell sweeper is not made "to sell" in the common acceptance of the term; it is made to serve—and thereby has become the most saleable sweeper a merchant can handle.

Thirty-eight years' endorsement of thousands of merchants and millions of users throughout the world wherever carpets and rugs are used is sufficient evidence that the Bissell is pre-eminent and that its leadership is based upon something more tangible than mere claims.

The Bissell sweeper is clearly the most handy, inexpensive cleaning device for every-day use.

Our special Spring-Easter offer is now in effect. Full details with proof sheet of free co-operative newspaper electros will be supplied on request.

CHICAGO SPRING BUTTS

A SUGGESTION

Have you a stock of Spring Hinges that have distinctive selling features which your salesman can offer and which would make the prospective purchaser buy them and no other?

Chicago "Triplex" Spring Butts

offer this advantage to you. The appearance, durability and finish of this article are unsurpassed, and in consideration of prices that are conservative in respect to value, the up-to-date dealer cannot afford to neglect this profitable business.

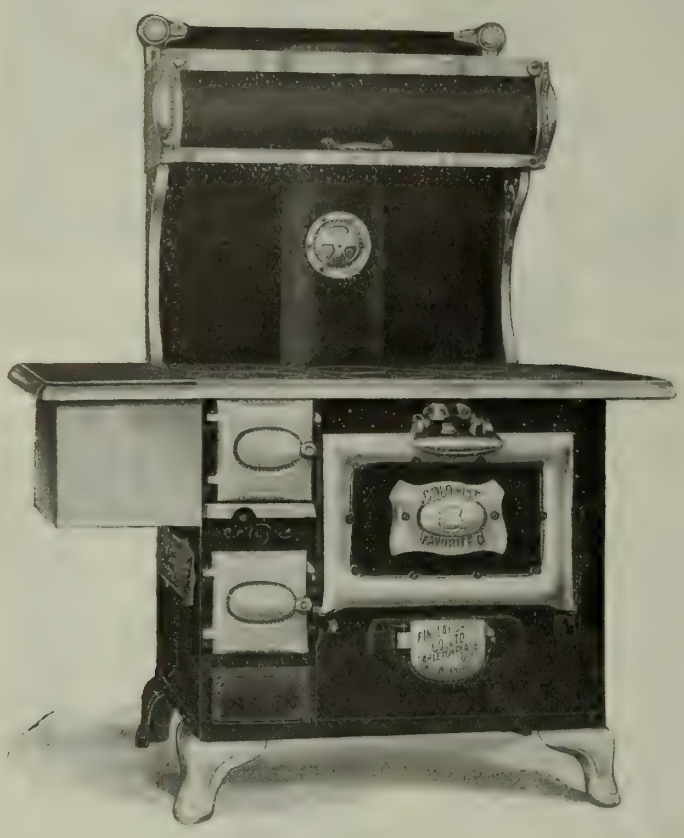
Send for Catalogue M 29. It fully illustrates and describes the most complete line of Spring Hinges manufactured.

Chicago Spring Butt Company,

CHICAGO TRADE C.S.B. CO. MARK **NEW YORK**

Safety First

(OUR MOTTO)



The most reliable extension ladder offered to the trade to-day. Made of clear yellow pine with hardwood rungs. Reinforced with wire let into a groove on the back of the ladder. One of the principal features of our ladder is the heavy malleable iron castings bolted on the sides which have given satisfaction for years. Stock sizes 20 to 40 ft.

Write for catalogue and prices for step ladders, bake boards, skirt boards, curtain stretchers and other woodenware.

McFarlane Ladder Works

158-160 River Street, TORONTO, ONT.

The Colonist Favorite

does not look it, but it is one of the cheapest SIX-HOLE STEEL RANGES on the market. The CLASS and STYLE does not cost anything, but goes a long way towards selling it.

More low-priced ranges will be sold this Spring than ever. The COLONIST is made to meet this demand.

Made in two sizes, 16 and 18-inch ovens, **SIX-HOLE TOPS, DUPLEX GRATES, CONTACT COPPER RESERVOIR.**

The SEMI-PLAIN DESIGN, PLAIN NICKEL, and SMOOTH CASTINGS, give it the appearance of a High-Priced Range. Look up the price if you have our list, if not send for one. The price will surprise you.

The quality will please you.

BOSS OVEN

GLASS DOOR

GUARANTEED

No. 750

BOSS Glass Door OVENS

Sold throughout the World. In almost every Country where Oil, Gasoline or Gas is used as fuel, you will find the Boss Oven on sale.

Its tremendous popularity is due to the fact that it is first of all a good and economical baker. We guarantee it to bake or roast satisfactorily on any good oil, gasoline or gas stove, or "money back" without argument.

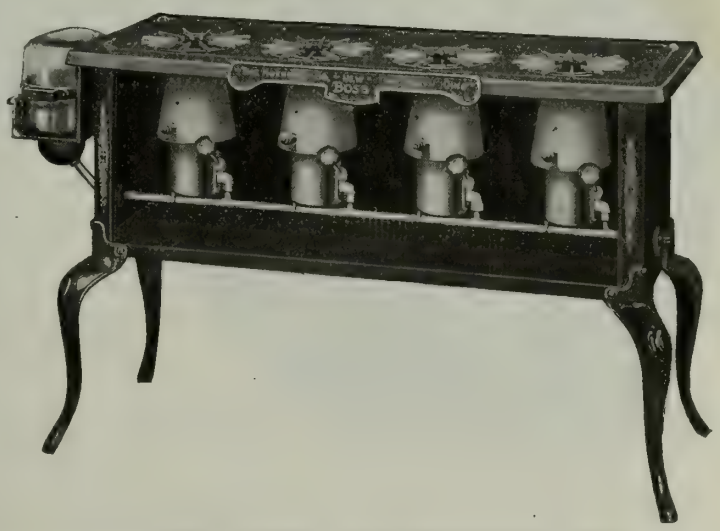
The "BOSS" is made better than any other Oven. Only the best materials are used. The body is made of Mecca Lustre Polished Blue Steel. The linings of heavy Corrugated Tin Plate, having thick asbestos inner linings throughout.

Its Patented Glass Door, which we guarantee not to steam up or break from the heat, has been a universal success. More than 600,000 of this style are now in daily use.

Many patented and exclusive features are found in the Boss. The new Hinge and Door Support leave the door opening entirely free when Oven is open. No danger of burning the hands or arms by coming in contact with wires or chains.

Large variety of styles and sizes in Glass and Steel Doors are shown in our new catalogue, which will be sent on request. Write for it to-day.

Write to-day for Complete Catalog and prices.



NEW BOSS OIL STOVES

Every Vital Feature in the construction of an Oil Stove has been carefully worked out in the "New Boss." There is nothing complicated to get out of order—nothing hard to understand to operate it properly.

Simple but Substantial construction has been adhered to throughout. The extra wide top gives more room for cooking utensils. The legs are strong cast iron, making the stove very rigid.

Patented High Wick Limits or fingers are provided on the inner combustion tubes which are engaged by the wick when turned at full burning height. These fingers automatically trim the wick when chimney is revolved.

The Intense Blue Flame plays right against the cooking utensil, giving quicker results and using less oil than most other stoves.

FOUR BURNER LOW WITH GLASS TANK

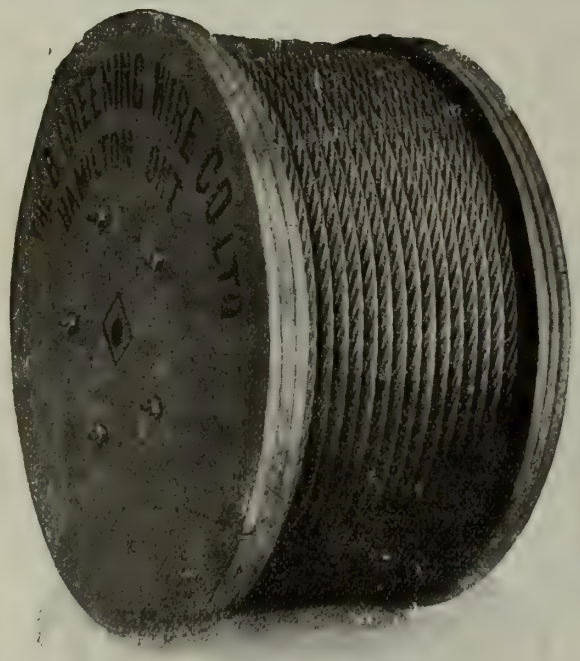
The HUENEFELD CO., 6000 Valley St., Cincinnati, Ohio

A household necessity for changing weather conditions

Now that the days are becoming warmer, householders do not require to start their regular heating system. Just such a handy, light, portable heater as

McClary's
"NEW FAMOUS" OIL HEATER

is a boon to the housewife in the Spring and Fall. It saves trouble and expense, and its manipulating features are simple and easy.



The one-piece Copper Oil Tank.
The simple method of replacing the wick.
The automatic locking device.
The oil indicator.

The demand is there, prospects good, and the possibilities of a live Spring business before you, Mr. Dealer—will you communicate with our nearest Branch for more particulars?

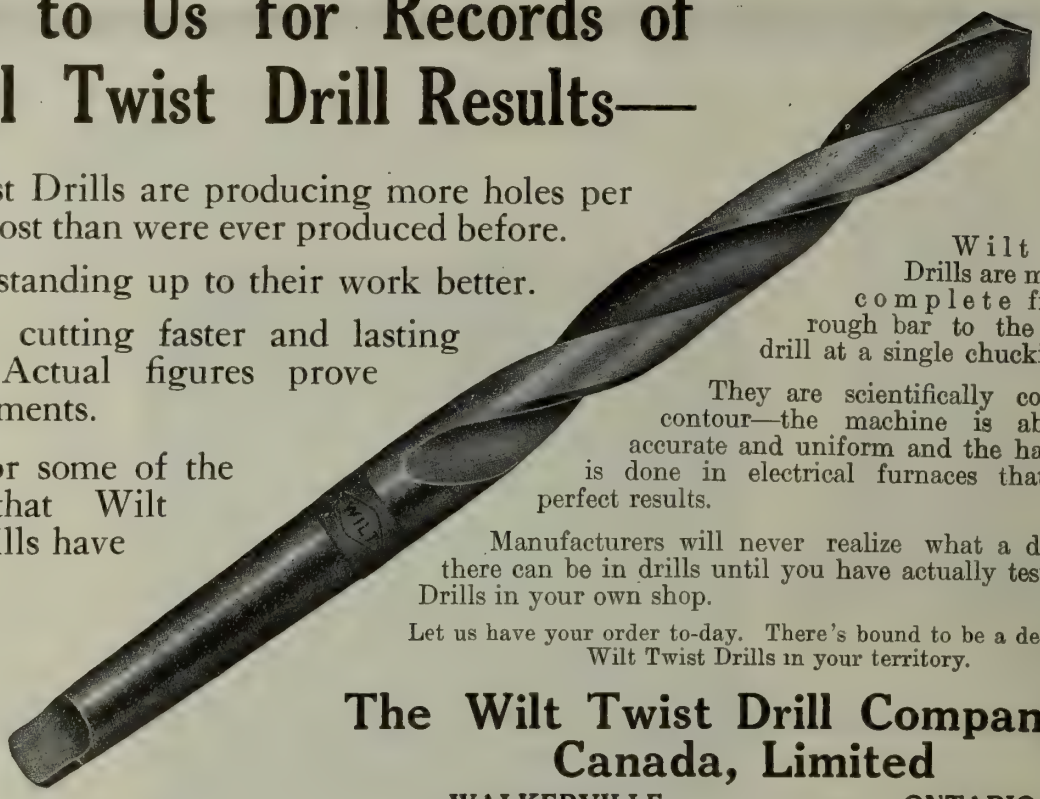
The Builders' Need the Dealers' Opportunity

This is the time of the year when new property is going up and old buildings are being renovated. Architects and Builders will be looking out for the best heating system. Medical men and engineers give the warm air system preference over all others, and all Sunshine Furnace users claim they have the best furnace for heating their homes.

The great new feature of the inclusion of American Ingot Iron (99.84% pure iron) gives Sunshine dealers a selling point of incalculable value. This iron has already made itself famous after years of severe tests. The fact that it is displacing a material of tremendous strength and durability in two vital parts of our Sunshine Furnace, viz., the Dome and Radiator, is sufficient proof, we think, of our faith in this remarkable iron.

The many outstanding features still remain and dealers should get acquainted with the 1914 Sunshine—it holds out a great selling future.

McClary's Ship Quick.



Write to Us for Records of Actual Twist Drill Results—

Wilt Twist Drills are producing more holes per dollar of cost than were ever produced before.

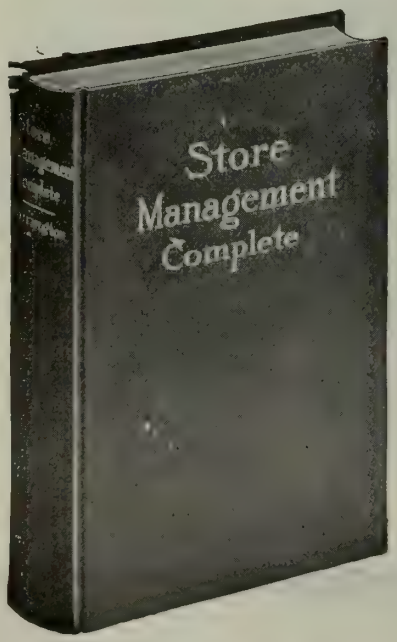
They are standing up to their work better.

They are cutting faster and lasting longer. Actual figures prove these statements.

Ask us for some of the records that Wilt Twist Drills have made.

Wilt Twist Drills are machined complete from the rough bar to the finished drill at a single chucking.

They are scientifically correct in contour—the machine is absolutely accurate and uniform and the hardening is done in electrical furnaces that insure perfect results.



Manufacturers will never realize what a difference there can be in drills until you have actually tested Wilt Drills in your own shop.

Let us have your order to-day. There's bound to be a demand for Wilt Twist Drills in your territory.

STORE MANAGEMENT COMPLETE

is a guide that will show you how to get the maximum trade and profit out of your busines. This book is written by Frank Farrington (a companion book to "Retail Advertising Complete.") It tells all about the management of a store. The following is a synopsis of one of the chapters:

CHAPTER V.—THE STORE POLICY—What it should be to hold trade. The money-back plan. Taking back goods. Meeting cut rates. Selling remnants. Delivery goods. Substitution. Handling telephone calls. Courtesy. Rebating railroad fare. Courtesy to customers.

"Store Management—Complete" is bound in cloth, contains 272 pages, 16 full-page illustrations, and 13 chapters. $1.00 brings this book to you postpaid. Money refunded within 10 days if not satisfactory.

Get this into your stove talk, Mr. Dealer
It means business for you

THE GURNEY-OXFORD ECONOMIZER

The GURNEY-Oxford "Economizer" will save 20% of the fuel and will make it possible for the housekeeper to have the fire under perfect control; from a quick-baking heat to a slow fire which will last for 36 hours, is accomplished by simply moving the handle of the Economizer on the dial. This is a fact that will sell stoves better than anything else you can talk. Figure, too, how interested the good housekeeper will be when you point out that this same device will ventilate her kitchen, will draw the smells of the cooking up the chimney instead of sending them through the house. If you are interested, Mr. Dealer, ask us more about this. We will show you that these statements are facts, and, as a good business man, will realize that these facts will turn "**lookers**" into "**buyers.**" Remember, too, that this Economizer is backed by National Advertising. People will come to your store asking about it. Better get our new book covering our wholesale proposition from our nearest office.

J-M AUTOMOBILE ACCESSORIES

Backed by the Guarantee of a $5,000,000 Concern

J-M Mobilite Electric Lamps
Operated on Dry Batteries

For head, dash, tail and speedometer lights, and interior car illumination. Also for motorcycles, motor boats, camps, etc. Made of hard rubber, fitted with a Tungsten bulb, a powerful lens and reflector.

Jones Speedometer

Most accurate speedometer made. Operates on the centrifugal principle, therefore is not affected by atmospheric changes. Strongest in construction. Has fewest number of parts. Not affected by jars or bumps. Big speed figures—steady hand—clock dial. Trip and season odometer. Instantaneous trip reset.

Long Horn

This mechanical horn never fails. It is not dependent on batteries, motor, bulb, wires or anything else that can possibly break or get out of order.

J-M (Mezger) Soot-Proof Spark Plug

The only plug that can not short-circuit—because it is the only plug that is absolutely soot-proof. Porcelain insulation becomes so hot at firing point that carbon is burned up the instant it settles.

J-M Non-Burn Brake Lining

Grips the drum the instant brakes are applied. Never slips. Unaffected by frictional heat, oils, water, grit, etc., because it is made of pure asbestos fibre interwoven with strong brass wire.

Red Seal Dry Batteries
(Guaranteed)

If Red Seal Dry Batteries do not prove satisfactory, we will supply new batteries without cost. This guarantee is the most convincing argument we can possibly offer to prove the high standard of Red Seal Dry Batteries for ignition work. Made in three capacities: 20, 30 and 35 amperes, 1½ volts per cell.

Safety First

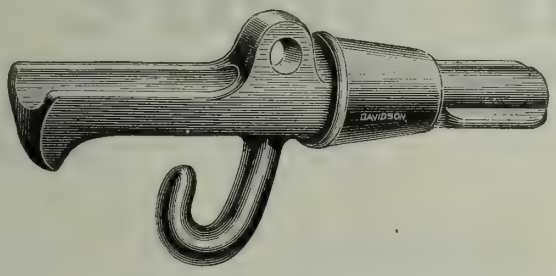
Nowadays "Safety First" is not only preached, but practised in all constructional work.

The exterior of a Home or Store may be "safe as the Bank of England," but ofttimes the safety of the whole building is jeopardized by inflammable or flimsy ceilings and walls.

The interior shown here is just an ordinary kitchen. "Metallic" interiors are all "useful patterns" and ranging upwards from the design shown they culminate in the acme of artistic decoration.

"METALLIC" CEILINGS AND WALLS

Are "Safety First" Materials—Safe as regards fire, decay, dirt, disease, insects—safe since they cannot fall and injure persons or furniture—easily and quickly applied over old ceilings and walls or over new boards or studding—economic—durable.



Use Metallic Ceilings instead of Lath, Plaster and Paper.

The METALLIC ROOFING CO. LIMITED

TORONTO King & Dufferin Sts. — Manufacturers Established 1884 — WINNIPEG 797 Notre Dame Ave.

Mr. Dealer—Write for full information, catalogues and terms. "Metallic" Materials are safe for your business and safe for your customers—there's money for you in "Metallic!"

THE "EMPIRE" SAP SPOUT

STRONGLY MADE OF MALLEABLE IRON, TINNED AND DURABLE ENOUGH TO LAST THROUGH A GENERATION.

EVERY SPOUT GUARANTEED AGAINST BREAKAGE

THEY WILL RUN SAP EARLY AND LATE with a capacity fully one-third more than any other make.

THE TAPERED END GIVES THIS SPOUT A FIRM HOLD of the tree and the play of the wind on a full bucket of Sap cannot possibly loosen the spout after it has once been driven in.

IT DOES NOT LEAK, and is very easy to insert and just as easy to remove.

USE 7-16-INCH BIT WHEN TAPPING, and it will be found that with the **"EMPIRE" SPOUT** every severed grain of wood within the hole is left perfectly free to run Sap—and the increased amount thus obtained will pay for the Spouts in less than one Season.

NO ROSSING OF THE TREES NECESSARY and therefore no injury to the bark.

WRITE FOR PRICES AND TRY A SAMPLE LOT.

THE THOS. DAVIDSON MFG. COMPANY, Limited

MONTREAL **TORONTO** **WINNIPEG**

Just as
there are several grades of

Enameled ware

so also
there are several grades of

Aluminum ware

It pays to know why they are not "all the same"

"Wear-Ever"

The Reason Why

The enormous pressure of rolling mill and stamping machine makes the metal in **"Wear-Ever"** aluminum cooking utensils dense, hard and smooth. The "case-hardened" surface of the metal is made still harder by electricity—which makes the inside of the utensil darker, smoother, less liable to be discolored and more easily cleaned.

"Wear-Ever" Aluminum Utensils

are stamped from thick, hard sheet aluminum—are made without joint, seam or solder. The less aluminum is heated and the more it is "worked" the harder it becomes. Consequently stamped utensils are rigid, are not easily dented nor softened by being heated.

Demand for **"Wear-Ever"** utensils exists—has been increased each year for eleven years by consumer confidence, by sample-demonstration work, and by magazine advertising.

Names of Customers, Cards to be used in circularizing them, Folders for distribution, Ad Book, Window Display Book, Demonstration Book, Display Cards and Picture Slides are at the service of **"Wear-Ever"** dealers.

Sell Sanderson-Harold Refrigerators

—they please everybody

Insulated with MINERAL WOOL

the best known non-conductor of heat or cold.

This material saves much ice and does not decay or cause odors.

Materials are the best obtainable. Lumber is seasoned in our own yards, where we carry over a year's stock of Ash, Oak and other Hardwoods. All are thoroughly kiln dried before cut up.

The design and finish are exceedingly attractive. There is a perfect circulation of pure DRY AIR at all times. In fact, the air is drier in the Sanderson Harold than the external air.

The design of traps assures perfect drainage and keeps warm air out.

We guarantee to remit purchase price and take back the refrigerator if not exactly as represented by us.

Be sure to have a few of these refrigerators in stock when the warm weather comes.

They pay a very good profit.

Drop us a card for booklet illustrating **Refrigerators, Screen Doors, and Window Screens.**

9 RUNAWAY BARGES SEND 156 CRAFT ADRIFT AND SINK 7

Boats Break Loose from Tow and Sweep Yacht Anchorages.

HAVOC ALONG SHORE OF THE HUDSON RIVER

Three Houseboats, with Families on Board, Among Those Struck and Damaged.

Nine runaway barges, laden with sand, gravel and other building material, swept through the numerous fleet of yachts, motor boats, launches and other small craft moored in the Hudson River between 137th and 170th streets yesterday morning, sinking at least seven of them and sending 156 adrift, many of them damaged.

All day the owners of the craft and the harbor police were busy searching for the drifting vessels, many of them being found as far south as 100th street.

A sudden squall out of the northwest at two o'clock yesterday morning parted the hawsers by which two tugs of the Cornell Towing Company were towing nine laden barges down the river against a rising tide. The nine barges, which had been lashed together, parted, two of them being blown inshore at 138th street, while the tugs caught the other seven, towed them inside of the cove at Fort Washington Point, opposite 176th street, and anchored them while they put out to stop the other two barges.

But these two barges were blown swiftly into the moorings of the Colonial Yacht Club, at 138th street, and with such force that three motor boats were sunk, forty more small craft were stripped from their moorings and the landing stage was smashed. The freed vessels started down stream. Their cabins had been crushed in by the barges, their sides scraped and their seams sprung in many instances.

The wrecking of the landing stage awa

The news story opposite goes to show how much damage may result from the parting of a rope. Viewed in this light, every poor or overstrained rope is a public menace.

A man's responsibility does not end with himself—it embraces everybody whom his dealings or actions may affect.

You, as a dealer, can do much to fulfill your responsibility by selling only Plymouth Rope, which is reliable, and by educating buyers to purchase new rope oftener.

Both these courses are also profitable—in money and good-will alike.

Vol. XXVI. APRIL 4, 1914 No. 14

Credits and Banking the Chief Topics Discussed

Four Hundred Saskatchewan Merchants Assemble at Moose Jaw and Delve Into Problems of Vital Importance to the Trade—Stricter Watch on Credits Will be One Result—Many Resolutions Passed—To Saskatoon Next Year.

Special Staff Correspondence

MOOSE JAW, April 1.—Organized only last May, at an enthusiastic convention held in Regina, the Saskatchewan branch of the Retail Merchants' Association of Canada has made exceedingly rapid strides. This was well shown at the convention held in Moose Jaw this week, when not only did 400 hard-headed business men of the Province discuss the various subjects introduced, but when it was also shown that legislation to enable the better collection of small debts has already been effected, and when it was made very clear that further sane legislation is to be sought during 1914.

From the moment that Mayor Pascoe, on behalf of the city, H. H. Bamford, president of the Board of Trade, and G. A. Maybee, president of the Moose Jaw branch of the Retail Merchants' Association, welcomed the delegates, proceedings went with a swing. A careful programme had been arranged, and the convention was exceedingly fortunate in that the speakers realized that their main object should be to start discussion, thus bringing out the exact problems which the merchants have been facing during the past year. In every session of the convention, these discussions were carried on with the greatest enthusiasm, President Bole occasionally having to determine just who had the floor at the moment.

Sound Business Methods Discussed.

A wide field was covered. The important theme of costing came in for much attention, it being shown that a merchant who does not charge his own salary as manager, an expense on the business, and who does not charge himself rent for the premises, even though they are his own premises he is using is riding for a fall.

It was also pretty well established in this connection that when stock is taken, the stock should be put in on the value it has at the moment, irrespective of what price may have been paid. This it was felt enables every year to be judged on its own basis, and gives the retailer a correct idea of where he actually does stand. To take any other attitude, as one dealer expressed it, "is bluffing one's self." To get away from this self-deceit seems to be one of the great objects which the Saskatchewan men are anxious to achieve.

Discussion on Credits Bears Fruit.

It would be hard to go to a Western convention at the present time and not find credits one of the important questions of discussion. This subject was given a great deal of time at Moose Jaw, and the discussion was probably more productive of immediate results than is usu-

THE 1914-15 OFFICERS.

The officers elected for the coming year are as follows:—

President — George Maybee, Moose Jaw.

1st Vice-Pres.—W. W. Cooper, Swift Current.

2nd Vice-Pres.—J. W. McLean, Saskatoon.

Treasurer—J. L. S. Hutchinson, Saskatoon.

Secretary—T. E. Raymond.

Next year's convention will be held at Saskatoon.

ally the case. A cash business was felt by all to be the aim, but there were many who expressed the positive belief that this was a Utopia which cannot be achieved in a minute. All, however, agreed that greater care must be taken in the matter of giving credit. The impression seems to prevail that something in the nature of a preferred list should be established. In the past merchants have been acting as bankers for the farmers, with the single exception that they have not carefully inspected the risks they were taking before making a loan—a loan which has been none the less a loan because goods were given out instead of cash. "If we are going to be bankers," said Mr. Agnew, of Prince Albert, "let us use the discretion of bankers."

Growing out of this discussion on credits and banking, and based upon an exceedingly practical address given by Mr. Turnbull, of Regina, was a discussion upon the question of collateral security. Mr. Turnbull made the delegates see, as perhaps never before, that there is such a thing as collateral security which does not secure. He gave ideas as to how these securities should be taken, and in answering questions, told of a number of instances where carelessness and lack of knowledge had brought not only financial losses, but a great deal of worry.

Censure Credit Men's Association.

The retailers at the convention were very willing to dig into their own weaknesses and mistakes, but they evidently expected to have the same privilege with regard to others, and during the course of the meeting some severe criticism was meted out to the Credit Men's Association, and some legislation was urged which will put more responsibility upon the shoulders of certain manufacturers.

The quarrel which the retailers have with the Credit Men's Association is as to the methods of disposing of bankrupt stocks. These, it was felt, should not be sold at slaughtered prices in the community where the failure has taken place, this having a tendency not only to spoil the other retailers' trade for the moment, but to ruin the financial conditions in the neighborhood for some little time.

Put Onus On Manufacturer.

As far as the manufacturers were concerned, it was felt that they should be responsible for any adulterated goods which the retailer may sell. That a retailer is held responsible for marketing baking powder or some such product which has been so badly made that it does not comply with the pure food law, was held to be ridiculous. It was rather the manufacturer of this line who should be dealt with.

Along this same line a resolution from Mortlach was read urging that every manufacturer of butter should put his personal stamp upon it. The consensus of opinion was that such action, while desirable, is practically impossible, as almost every grocer and general store man in the West is taking butter from a great number of farmers in his neighborhood, and to get all to stamp would be not only difficult, but would require a great deal of registering.

During the convention the members had the opportunity of inspecting two of Moose Jaw's largest plants—the Robin Hood Milling Co. where all saw wheat turned into flour, and where was seen the porridge oats in all its stages from the raw product to the finished cartons. Also the house of Gordon, Ironside & Fares Co., where the various processes were explained and where the visitors were tendered as souvenirs, little pails of lard—pails which looked from the outside to be filled with ice-cream for dessert, rather than lard for kitchen use.

The Discussion on Credits.

"Retail merchants, as a whole, are not conversant with the real costs of doing business," stated W. F. L. Edwards, of Regina, in commencing his address upon the question of Credits, on Tuesday afternoon. He proceeded to show that cost of merchandising includes not only the actual cost of the goods, but also rents, taxes, light, fuel, insurance, remuneration for the proprietor, interest on the wholesalers' accounts and interest on capital.

"Even if you own your own store," declared the speaker, "You should allow rent for this. If you are buying the store, you should not only charge yourself some rent, but count interest upon mortgage and agreement as a charge.

"Then," declared Mr. Edwards, "you must, to secure a right system, charge the business for your services as manager. Were you not there it would be necessary to pay $100.00 or $200.00 a month. You must take this charge into consideration in establishing a selling price for your goods—you want a selling price which will yield a real profit."

From this question of Costing Mr. Edwards hurried on to the subject of giving credit. At once an even greater interest was evinced by those present. It was quite evident that Mr. Edwards was touching upon disputed points—how wide, the diversity of opinion was shown in the subsequent discussion. Many grounds were taken—from President Bole's belief in hard cash business, and hard cash business only, to the belief of others, that credit is absolutely necessary. There was, however, a general feeling, that credit must be limited—given only to what might be called a preferred list.

Merchant Should Not Be Banker.

Mr. Edwards did not believe it is really necessary for customers to seek credit. All, he thought, could find the money to pay for their necessities. Yet while practically all desired to do a cash business, many there are who regard the step as out of the question for a time at least.

"But," said Mr. Edwards, pursuing this point, "why should you carry a farmer along? If the man is a good risk why should he not get money from the banker and pay you? It seems to me the proper condition is now inverted. You go to the bank and raise money to carry the customer."

In cases where credit appears absolutely necessary the need of great care in giving this credit, and in making collections, was emphasized. Mr. Edwards gave it as his opinion that 10 per cent. of every dollar put on the books could be immediately struck off for bad debts. "I doubt," he concluded, "if there is one man here who would not now accept 65 cents on the dollar for the book accounts. If so, you are losing just 35 per cent. The need of a cash business, or of a very carefully regulated credit business, is therefore apparent."

RESOLUTION GOVERNING CREDITS.

The matter of credit brought out in a number of addresses was crystallized in a motion by Mr. Krass of Rouleau, and Mr. Healy of Bridgeford, as follows:—"That in the opinion of the members. it would be a wise course for retailers to adopt the principle of requiring a financial statement from persons seeking credit, and that such steps be taken as are necessary to secure the same recourse as banks possess in similar cases."

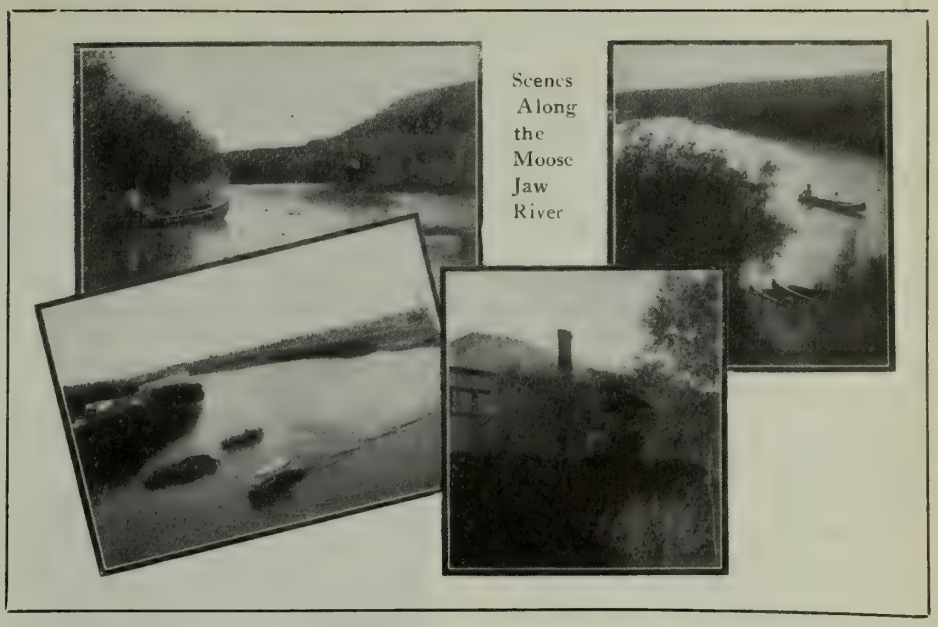
Careful Credit System Uheld.

"We would all like to conduct a cash business," said J. L. S. Hutchinson, of Saskatoon, in opening a very keen discussion, "but it simply can't be done. It is an impossibility in this country. Why do the manufacturers and wholesales give credit if the other system is so superior? They all give credit."

Mr. Arden of Saskatoon, was just a little skeptical of the results which would follow a hard stand for the proper margin of profit. "Most of us face competition," he stated. "Some of it is poor competition, and while we try to sell our goods on a basis which includes overhead expenses, our competitors do not, and they get away with the business. Mr. Edwards will say the actions of these men will effect their own cure, but somehow or other they keep on, and some of them do well.

"I wouldn't accept 65c on the dollar for my book accounts continued Mr. Arden with a smile, "I would want 75c at least. If we were universally agreed to establish a cash business, that might be possible, but to get that united front is impossible."

"I consider the cash system the only one," declared Mr. Healey of Bridgeford. "There's no use saying it is impossible. It is no such thing. We determined last November to establish a cash business. All the merchants in our district did. We have done a cash business since. I have not done as much business as the year before, but neither has anyone else. I do not think we have lost a thing because of our cash system, and we have the money for the goods sold. Moreover, while I had not a great amount on the books when we turned to a cash system, I would gladly have taken 65 cents on the dollar for these accounts."



"You certainly have the right system, if it is feasible in your community," commented Mr. Hutchinson, "but I hope it is a real cash system. They think they are all doing cash business in North Battleford, but they are not. They are simply limiting their credit to a preferred list. It is a good step, but not what I call cash."

Slow Music and No Flowers.

Mr. Arden here introduced a new aspect: "Isn't indiscriminate buying," he asked "almost as disastrous as indiscriminate credit?"

The general opinion was that indiscriminate buying brings great trouble—but if it goes hand in hand with indiscriminate credit—well, then it is slow music and no flowers.

A couple of instances of the value rendered by the Retail Merchants' Association were here given. Mr. Hutchinson told of a man coming in for a rifle on Monday last. He found, from the Retail Merchants' Association, which now has pretty complete information as to the way people pay their bills, that this man's credit was E. Result—Well Mr. Hutchinson has that $35.00 rifle in stock, instead of a $35.00 debit entry on his books.

Scenes Along the Moose Jaw River

Striking Case of Co-operation.

Mr. Arden told of giving a rather high quotation for work to a doubtful buyer, and of warning the other dealer to whom this customer said he would go, that the customer was bad pay. "My fellow business man," said Mr. Arden, "quoted a price, but refused to sell except for cash. He got a check, therefore, got this marked, and then came in and gave me $5.00."

Do people turn from cash to credit? W. J. White, Eyebrow, thought yes. He stated that several people had told him they got no advantage from paying cash, and were going to take credit thereafter. "Should there not," asked Mr. White, "be a difference between the credit price and the cash price?"

Mr. Haywood stated, in reply, that he had offered 10 per cent. off for cash, but that even this did not bring out money. Mr. Hutchinson, on the other hand, has given this discount on all but a few lines for over a year now, and states he would not abandon the discount for anything. "We sent out our statements about the 15th," said Mr. Hutchinson, "and on each bill is marked the amount upon which 10 per cent. is to be allowed. This certainly brings in the money."

"Is it wise," asked A. E. Jones, "to give discount after 30 days. Haven't you assumed the risk by carrying the accounts that long?

Mr. Cummings of Truax, here got after the banks, declaring these have now refused to accept a good farmer's note, unless it endorsed by the merchant. "A farmer," said Mr. Cummings, "can't get money from the bank in our district. How can we possibly get cash from him?"

The president of the association, Mr. Bole, refused to speak on any length on this subject of credits—although many called for his opinion—some laughingly saying they wanted another scolding for doing a credit business, such as they got at Regina last year. "I will say this, though," remarked Mr. Bole, "I would go into any district in Saskatchewan, run a cash business, and I would shortly get my share of the trade. The cash system is the winning system. I think we all realize that, and more than ever I think we will all strive to attain this happy state."

The Expense of Leakages.

The Cost of Doing Business was the subject allotted to J. L. S. Hutchinson, who said that the Irishman's definition, that "the cost of a man's business is everything that it costs him," is the best explanation he could give. Cost cannot be arrived at in any haphazard way. It needs careful bookkeeping. He spoke of a number of ways in which accounts had been subdivided in his own store in Saskatoon. There is a section for taxes, for insurance, for lighting. "I have a complete tab on my business," said Mr. Hutchinson, "and know very readily when too much is being spent, and where it is being spent."

"There is one expense," continued the speaker, "often overlooked. I have overlooked it in the past. It is the expense of leakages. I would like to see every retailer have a daily statement of his gross profits, for this is of great assistance in enabling the detection of

leakages. The larger the city—the larger the business—usually the larger the leaks."

Continuing, Mr. Hutchinson told of a rude awakening he had received when he found recently that his profits were not nearly what he expected they would be. "Put a detective on," advised one of his friends. At first Mr. Hutchinson thought this seemed rather a cold-blooded step to take, but as it was very evident something was wrong, a detective was put in the store, and in less than a month, three of his supposedly best men were dismissed. "I would not like to say what they had taken," remarked Mr. Hutchinson, "but if I had not had figures tabulated under various heads, I would never have realized what was going on."

Continuing, Mr. Hutchinson spoke of the question of profit. Usually a hardwareman wants to get 10 per cent. His cost of doing business will be somewhere between 11 and 25 per cent., but to reach this 25% it is necessary to mark up full 33% on the cost price.

Weighing Incoming Goods.

In discussing this address, Mr. Edmunds brought up the need of weighing goods as they arrive. "If this weight is not checked," he said, "there is sure to be a loss. Moreover, goods are often pilfered in transit.

"I know," he continued, "that these are small losses, but often it is the great number of these small losses which eat into the profits."

"When you are taking stock," asked Mr. Sprole, "do you mark down the value of goods which are left over?"

"No," answered Mr. Hutchinson, "I put them in on the stock sheets at the purchase price. There are some which we will have to sell a little below cost, but the average is right."

"Well," remarked Mr. Williams of Moose Jaw, "I mark down the value of our goods at stock-taking. I do not think the depreciation of 1913 should be carried over to 1914."

It is very evident, as Mr. Hutchinson said, that such marking down for depreciation is necessary in perishable lines, but not so necessary in hardware. The general opinion, however, was that in taking stock, men should estimate the present value of goods and give them this value.

A. McGraw of Yellow Grass told of a car of cement which had become wet through a defective roof. "How would you deal with that?" he asked. "Well," said Mr. Hutchinson, "that would come among the leaks."

Another one of these leaks was brought out by S. D. McMicken of Moose Jaw. "In 1912," he said, "I was doing a great business, yet I had discovered I had made less by $2,000 than in 1913 when I had a much smaller business. On estimating I found hams going out, teas going out, almost everything going out. I determined to have all deliveries after that from one door."

Mr. Hutchinson suggested that it would be wise to check up the delivery man at irregular intervals, so that they would be very well aware that what they were doing was being watched. "C.O.D. orders," he said, "also required a great deal of attention, or there would be heavy losses in this department."

Canadian Banking System.

Banks, a subject in which all are interested just now, were dealt with Tuesday evening, when C. O. Hodgkins, manager of the Sterling Bank, Regina, told of the Canadian system.

W. W. COOPER,
of the W. W. Cooper Co., Swift Current, Sask., elected First Vice-President of the Association.

The government regulations, requiring at least $250,000, paid-up capital, Mr. Hodgkins considered very wise. He also spoke of other laws governing banks. "You may find some of these laws irksome," he said, but you must remember they are for your protection as well as for the protection of others."

Canadian banks are banks of issue, banks of deposit, and banks of discount. They issue bills, which are nothing more or less than promises to pay them. They take care of deposits. In this connection Mr. Hodgkins stated that in Western Canada, there are comparatively few savings accounts. Farmers when they have a few dollars are inclined to buy more land. Sometimes they buy too much land, and it would be better for them to have a savings account.

"Very few children have savings accounts. That is another strange thing about the West. Parents can help in remedying this. The spirit of thrift is necessary. There has not been much of it in the West, but there is going to be."

Proceeding, Mr. Hodgkins spoke of loans. "It is your money that banks loan," he stated, "and to protect your money, they loan on such terms as will enable them to call the loans speedily. Real estate has never been considered a liquid asset, and so it would be unwise to loan on this."

Reserves, Mr. Hodgkins pointed out, lead people sometimes to say that the bank is keeping its money in the vaults and won't loan. The money is kept to safeguard the depositors. "If banks were run as some people would run them, you would go over to the bank to-morrow and find no funds."

As regards borrowing he gave a general idea of how bankers size up a man before giving or rejecting a loan. Antecedents, character, means, ability, occupation—all these things are thought of. Then the way a man is running his business is considered too.

Here Mr. Hodgkins advised all thinking of branching out in business to consult their banker. The banker knows general conditions and can invariably be of assistance.

Dealing with another aspect of the retailers' financing, the speaker urged having a chartered accountant make a report once a year at least. The money expended is well expended.

Ability to pay back, competition which may be encountered—these, and the balance of a man, are of vital importance to the bank in determining whether or not they will loan the funds which have been placed with them.

Starting the discussion, Mr. Agnew of Prince Albert, stated that there are bankers of all kinds in Western Canada—perhaps the largest class being the retail merchant, who supplies the farmer loans in goods. Should not the bank loan to these farmers? he asked.

"Well," answered Mr. Hodgkins, "I think farmers are rarely refused—except quarter section men, and the exemption laws are such that here there is really no security."

Another question was as to the new law enabling banks to loan upon crops. This, Mr. Hodgkins thought good, except that banks might be a little hesitant in taking this security, owing to the difficulty in watching the grain.

Question of Collateral Securities.

"Collateral securities," were treated by Mr. Turnbull of Regina, who commenced his remarks by stating that this was the one thing the retailer should keep away from.

Mr. Turnbull agreed with remarks previously made to the effect that the retailers are the bankers of the farmer. "You shouldn't be," he said. "You

should educate your customers to pay, if not cash, at least promptly. In your banking you don't proceed with the care that Mr. Hodgkins has outlined. Many of you have given credit—really loans—to every Tom, Dick and Harry.

"Collateral security is security for the fulfillment of a contract, and the best way to make it unnecessary—and to make it unnecessary is the aim—is to keep close tab of credit

"Your best security," continued Mr. Turnbull, "is the man—his real characteristics. Then the dealer's personality counts. If you have a reputation for not taking advantage of farmers, they will give the collateral security when asked."

Proceeding, Mr. Turnbull took up one by one the classes of securities which dealers might meet. A formidable line-up it was,—yet the questions asked later indicated that even more varied have been the securities taken by some Saskatchewan dealers.

Promissory notes, Mr. Turnbull thought fairly satisfactory. It is easier to force payment with these, than with nothing but book debts—for their sale and delievery of every item has to be proven which in case of a large establishment is rather a difficult thing to do.

Moreover, as Mr. Turnbull pointed out, the promissory note makes the customer pay interest for what he owes. "Every one else exacts interest, and you might as well get it too."

But it was shown that this interest is not altogether simple—to get. If allowed to become overdue notes cease to bear the rate called for—but only the legal interest of five per cent., unless a clause providing for the continuance of the interest is inserted.

Promissory notes, too, are in a sense valuable because they are negotiable, and can be given as security for the dealer's accounts.

The best security, and as Mr. Turnbull also assured the delegates, the hardest to get is a mortgage on real estate. The mortgage, once secured, should, however be immediately filed, as priority is not according to the date on the mortgage, but according to the time it was registered in the land titles office.

Mortgages are also available for collateral, because they may be assigned.

Speaking of chattel mortgage, Mr. Turnbull urged getting a lawyer, and a good one to draw these up. There are many points to be remembered in order to make such a mortgage incontestable. Besides all the legal points, careful details must be given to facilitate the recognition of property.

An instance of what may result from lack of care in drawing chattel mortgages was given. A lumberman as collateral security recently drew a chattel mortgage on a farmer's grain. He drew this incorrectly. Subsequently a machine man, as security, drew a bill of sale on the same grain. He too prepared the paper incorrectly, but he did what the other man overlooked—he filed his bill. The lumberman, however, after the filing of the machine man's bill got possession of the crop and sold it. He is now being sued for recovery of moneys received.

One more bit of advice Mr. Turnbull gave before being called upon to answer a number of technical questions. "Don't, he said, "take a lien note except where you sell a man something. Only then is it good."

Parcel Post Should be Self-Sustaining.

Resolutions prepared by the committee appointed for that purpose on the opening day of the convention, resulted in discussion upon points of great interest to retailers at Wednesday morning's session. The advisability of establishing a Merchants' Mutual Fire Insurance Company was suggested, and the Canadian Credit Men's Asscoiation came in for some censure by reason of the methods this organization is said to follow in disposing of bankrupt stocks. It is interesting to note that in one of the resolution passed dealing with Parcel Post, the merchants placed themselves upon record as favoring the continuance of the recently adopted system, insisting only that this be self-sustained.

The question of fire insurance was brought up in motion moved by J. L. S. Hutchinson, of Saskatoon, and seconded by Mr. Evans, of Prince Albert. Mr. Hutchinson fairly belched forth figures, purporting to show that a co-operative company would result in a much better rate for the retailer. His idea is to have a certain premium guaranteed per year, but that later, when the cost of running the mutual company and the amount of the losses have been determined, a rebate could be given.

E. G. Agnew, of Prince Albert, thought that the banks might not favor policies taken by the mutual association. Mr. Frampton, of Biggar, held that the mutual company would be on the same footing as the other board companies when they once secured their charter. Mr. Arden, of Saskatoon, felt that the question could be definitely decided this year, and proposed the appointment of the committee to go thoroughly into the question and report to the convention of 1915.

More Privileges in Small Debt Court.

It was moved by Mr. Morrison, Moose Jaw, seconded by Mr. Evans, Outlook, that the executive board of the Saskatchewan Provincial Board of Retail Merchants' Association, Inc., be asked to take steps at the next session of the Legislature to see that the Small Debts Court Act is amended in the following four particulars:—

(a) That the limit should be raised from $50 to $100.

(b) That judgment when given may be executed against the lands of the defendant.

(c) That in each and every case where a defendant is summoned before a Justice of the Peace he shall be compelled to appear in person, or to give good reasons satisfactory to the J. P. as to his non-appearance; said appearance being required for the purpose of ascertaining said defendant's financial position.

(d) That it is expedient under this Act that any party to any action taken under this Act shall be obliged to furnish security for costs before an appeal is taken.

Mr. Evans, of Prince Albert, thought this resolution a splendid one, but felt that it did not go quite far enough, holding that the limit should be raised to $180 or $200. Even that was not high enough to suit Mr. Telford. He thought that the interests of the merchants would be best served by securing legislation enabling settlement of a debt up to $500 being effected before a justice of peace, providing both parties were willing.

J. M. Brayley, provincial organizer, felt that there would be little chance of securing such an amendment, owing to the fact that the lawyers of the legislature at Regina would oppose this.

Mr. Bole, himself a member of the legislature, took a different view. He says there are only three or four lawyers in the Regina legislature—not enough by any means. He was not certain that giving J. P.'s the right to decide on cases up to $500 would be wise.

W. T. Blythe, of Qu'Appelle, took a similar view, questioning the qualification of many J. P.s to give a proper interpretation of the law.

Mr. Morrison, of Moose Jaw, also urged the convention to go slowly. An amendment raising the limit capable of settlement before a justice of peace to $200 was however proposed, but defeated; the original motion raising the limit to $100 carrying.

Implement Dealers' Methods.

The implement dealers came in for some severe criticism in discussion growing out of the following motion moved by Mr. Evans, Outlook, seconded by Mr. Krass, Rouleau.

(a) That at the coming session of Parliament steps be taken to secure

from the Government prohibiting the taking of any security, other than a lien note, by implement dealers and others for the amount of their claim on any goods sold in excess of the value of the goods themselves.

Mr. Evans brought out the fact that in drafting this resolution, the committee had felt the farmers had suffered by reason of inability to meet honest debts, and that he felt much of this inability was the result of machinery men's actions. Such a law as was suggested in the resolution, he urged now in force in Alberta and would be a splendid thing for Saskatchewan.

Mr. Agnew, of Prince Albert, advanced the opinion that in dealing with an implement firm you are dealing with "a corporation without a soul."

Still other delegates felt that the retailer should come before the implement dealer in the matter of credits, and many were antagonistic to the system of canvassing adopted by the implement people. It was also brought out that the legislature has appointed a committee to deal especially with this question, and it was felt that the resolution, as sent forward would assist this committee materially.

In another motion by Mr. Evans, of Outlook, and Mr. Arden, of Saskatoon, it was stated:—

"That this committee place itself on record as being opposed to any but accredited members of the association being present at any future convention of this Association and that the executive take cognizance of the same."

The delegates apparently are of opinion that there will be greater freedom of speech upon many questions if the public press are excluded, and if other people, not properly accredited are forbidden an entrance to the hall.

Hot on Credit Men's Trail.

Resolutions moved by Mr. Arden and seconded by Mr. Evans, to the effect "that representations be made by the provincial executive to the executive of the Canadian Credit Men's Association, and to the wholesalers direct, in regard to the manner of handling bankrupt stocks," seemed mild enough till discussion began. It was evident that this was one of the points upon which the retailers feel most keenly. Mr. Hutchinson and other speakers, said that it is the habit of the Credit Men's Association to take over a bankrupt stock and immediately to start a sale in the district where the failure has taken place. The result is that not only are prices shattered, but customers in the district are led to buy more than they want by reason of what they consider attractive prices. They do not themselves get value, and the trade of other merchants in the town is not only ruined temporarily, but is given a set-back for months to come.

It was felt that this system could be easily changed. Some seemed to think that the Credit Men's Association might well turn over the stock for sale by the other merchants in the district. Spreading the goods around among a number of dealers the creditors of the defunct firm would be looked after. The merchants buying parts of the bankrupt stock would do very well, and trade would not be disorganized.

Other Resolutions.

It was moved by Mr. Evans, of Prince Albert, and Mr. Arden, of Saskatoon:—"That this committee favor the adoption of a uniform provincial outing code."

Moved by Mr. J. Evans, of Prince Albert, and Mr. Arden:—"That this convention request the Dominion Board to ask for an amendment to the Lords' Day Alliance Act authorizing municipalities to enforce the act without having to refer to the Attorney-General."

Moved by Mr. Evans, of Prince Abert, seconded by Mr. Schrader, of Aberdeen:—

"That the Provincial Executive Board be requested to ask the Provincial Government for their approval of an act making effective inter-provincial judgments being brought up in the Dominion House, and that the executive of the Dominion Board be requested to ask the other provinces to concur in the same."

The resolution relating to parcel post was as follows:—

"That it is the opinion of this meeting that no change should be made in the present parcel post system as recently adopted by the Government until it has been fully worked out and tested, and that we should insist as far as possible that it be self-sustaining and that the secretary be instructed to notify the various newspapers of the province that exception is being taken to several articles which have appeared lately in the press, which would seek to impress the public with the fact that the retailers themselves are opposed to the parcel post system, and to notify them that such is not the case."

Moved by Mr. Soupely, Aylesbury, seconded by Mr. Evans, Prince Albert:

"That the executive be requested to ask the government to change the time allowed for registration of co-partnerships and business of any nature, excepting joint stock companies, from six months, as at present constituted, to thirty (30) days."

Moved by Mr. Evans, Prince Albert, seconded by Mr. Healy, Bridgeford:

"That the executive be instructed to write to the provincial secretary at Regina inquiring what the powers are, if any, are possessed by the official trustee for the province, re the examinations and investment of trust funds."

More Daylight Scheme Discussed.

Before the important matter of electing officers for the ensuing ear was entered upon, Wednesday afternoon, a question by Mr. Evans, of Prince Albert, started a discussion upon the advisability of setting back the clock during the months from May until October, thus securing an hour more daylight.

The question is apparently now under discussion in Prince Albert, Moose Jaw, Regina, Saskatoon and several other places. G. F. Elder, of Wolseley, told of the experience there last year, when the system was tried. The farmers objected and because of this the old order had to be resumed.

It was felt, however, that if the railways would make the change all would go smooth, and a motion to submit the suggestion to the railways was made and carried.

Single Tax Question Next Year.

Mr. Agnew, of Prince Albert, raised the question of single tax, but this was felt to be a big subject for the closing hours of a convention, and it was laid over for next year.

As recommended earlier in the convention a committee was appointed to go thoroughly into the question of establishing a Mutual Fire Insurance Company and to prepare a report for consideration at the next convention.

To this committee were appointed Messrs. Hutchinson, Saskatoon; Arden, Saskatoon; Morgen, Delisle; Clair, Prince Albert; Melike, Saskatoon.

Another standing committee to look after securing new legislation was also appointed as follows: Messrs. Bole, Regina; Hutchinson, Saskatoon; Mark, Rosetown; Maybee, Moose Jaw, and Robinson, Canora.

The President's Valedictory.

Tracing the progress made in the past year, in his valedictory address, President Bole pointed to the Small Debt Act, as one of great value, as it is helping dealers collect small amounts. He did not think the members should expect to accomplish everything at once. Thorough organization is first necessary. Then only those laws should be sought which benefit all—which give the public a square deal. "Let us fight against illegitimate trade, like the dumping of bankrupt stock on one small market, that is of benefit to none. Let us not,

Prices of Hardware Are Not High

Many Persons Have Wrong Impression Regarding the Prices of Various Hardware Lines—The General Advance Has Not Been Large—Iron and Steel Prices Said to be Low.

THE assertion has often been made in recent years that prices on nearly all lines have advanced at a marvelous rate. That in these days, when the high cost of living is being discussed in all quarters, the public is called upon to pay a great deal more for various lines of merchandise than it did ten or twenty years ago.

Hardware merchants frequently hear customers complaining about the high prices which the latter claim they are called upon to pay for certain lines of hardware. The customers appear to be under the impression, and some merchants feel the same way, that hardware lines have also advanced in price at a marvelous rate, and that the prices now charged are very high.

Very few attempts have been made to correct this impression which exists in many communities.

It is quite true that there has been a remarkable advance in the cost of living. Foodstuffs, rents, etc., have advanced in marked degree, but hradware and kindred lines have been less affected than almost any other line.

A striking instance was brought to the attention of Hardware and Metal a few days ago when H. H. Otton & Sons, of Barrie, produced the invoice for their first bill of goods purchased March 5, 1894, twenty years ago, from H. S. Howland Sons & Co., Toronto.

The invoice showed that a general sorting order had been placed, comprising an assortment of goods usually purchased for a town located in a farming community.

On making a comparison of the prices then charged, and the prices in effect to-day it was found that the advance in price, covering the whole assortment, was 6½ per cent. Some lines were then lower than they are to-day and other lines were higher.

It is, therefore interesting to note that the general advance in hardware quotations has not been as marked as many persons would have us believe.

In this connection, it is also interesting to note the remarks of the American Metal Market and Daily Iron and Steel Report regarding the low prices of iron and steel, and the cost of steel commodities compared with the prices in effect in the nineties, a period to which many persons refer, when making assertions regarding the low prices in effect in previous years.

"It has been said so often in recent years that all values are much higher now than they used to be, measured in currency, that the statement has secured very general acceptance.

"Like a great many other things that are accepted as obvious facts, this statement is not true. As a general proposition, it is absolutely wrong. We trust we may be permitted to look at the figures in the light of reason and therefore depart from two of the common practices of statisticians, first, to regard pig iron as a true index, second to regard the historic minimum price as the proper basing point.

"It is not pig iron that reaches ultimate consumption. Consumption is of castings, machinery, rolled and formed steel, etc. As a matter of fact, the margin between pig iron and many of its finished products has greatly decreased, hence a comparison of pig iron prices is not a true index to fluctuations in finished products in the form in which purchased and used.

"Furthermore, comparison of present prices with historic low prices are valueless from a practical standpoint. One might as well compare with historic prices. Who paid those prices? For how much tonnage were they paid? Take steel bars, for instance. For a period of less than 24 months the market price was under one cent a pound, by from $1 to $2 a ton, but we know we are right in saying that much less than a million tons was actually sold at less than a cent a pound, that prior to that period not more than about a million tons had been sold at any price, and that since the period of low prices more than 30 million tons have been sold. at various prices higher than a cent a pound.

"Would it not be absurd, therefore. to compare present prices of bars with a basis of $18, $19 or even $20 a net ton? It is a question of "the cost of living" to the consumers. How long, or to take a more precise view, how much, did they live under those low prices?

"Taking as a basis, for argument, the lowest average price that prevailed for any consecutive three months, we find that pig iron is 50 per cent. higher, billets 47 per cent. higher and bars, plates and shapes 20 per cent. higher. The nearer one gets to the actually consumed form the less is the advance. The low point was in 1897. If we were able to compare prices of fitted and erected structural work, or finished steel cars, we should undoubtedly find that prices to-day are very decidedly lower than at that time. Yet everybody refers at one time or another to the low prices that obtained in 1897 to 1898.

"If one were to average any number of years, say the five consecutive years of lowest prices, he would find that present prices of material as used are lower than then. With pig iron this would not be true at all; one would have to take a period of ten years, so as to include large parts of both sides of the trough in the curve of prices in order to find an average above the present level.

"Let us therefore look at things in a practical way. Iron and steel products as they are consumed are in reality lower to-day than they were in that historic low period of the nineties which is so often cited. A little knowledge is a dangerous thing, and a little statistics is still more dangerous, for a piece of knowledge can sometimes be used simply in its true bearing and application, but a piece of statistics, never. The latter can only be used to draw conclusions therefrom. The cost of steel commodities to-day is lower than the cost of any considerable tonnage has ever been in the past. The exceptions are only a period in 1897-8 when a relatively small quantity was sold, and a period some two or three months ago when a very limited tonnage was sold."

REMOVING IRON RUST.

One of the methods given is as follows:—Steep in a solution of chloride of tin; the time the pieces remain in the bath will be determined by the thickness of the coating of rust. Generally twelve to twenty-four hours suffices. The solution should not contain a great excess of acid. On taking the pieces from the bath, rinse first in water, then in ammonia, and dry quickly. The iron will have the appearance of dull silver, and on polishing will resume its normal appearance.

CHANGE NAME OF TRAP.

Oneida Community, Ltd., announce that the trap which used to be called "Star Brand" in Canada, is now known as the Oneida Jump Trap.

HARDWARE AND METAL

VOL. XXVI. No. 14 Toronto, Canada, April 4, 1914 Two Dollars per Year

The Business Situation

WITH the opening of Spring there has been a vast improvement in business as far as hardware jobbers are concerned. At the present time shipping departments are very busy rushing out Spring orders, many of which were booked for April 1 delivery. A large number of orders had been booked for March 1 and 15 delivery, and there was a tendency on the part of some retailers to have shipments deferred until later dates. Most of these orders have now been shipped, and there appears to be a general feeling of optimism percolating all ranks of the trade. In the metal markets business is showing improvement, although the volume passing is not large. The advent of Spring created optimism, and orders now being received are for larger quantities than for some months past. Paint manufacturers are very busy and appear to be well satisfied with the volume of business passing. The majority of merchants engaged in hardware and kindred lines report that March was a very satisfactory month as far as business was concerned. February was rather dull. From present indications, April business will reach a high level. The Financial Post, commenting on the business outlook, says:

Immigration continues to promise well. Sir Thomas Shaughnessy informed The Post that their first-class vessels were booked up to 90 per cent. of their capacity and their second-class to over fifty per cent. By the time the height of the immigration season is reached the volume will approximate normal. Meanwhile from the agricultural districts of the Dominion the outcry for agricultural labor is very strong.

During February the volume of foreign trade diminished very materially. Exports continue to hold their own very well, but the declines in imports is very marked. February exports showed some decline, but it was slight when it is remembered that so great a proportion of the Western crop was moved out before the close of the year. The crop of 1912 was moved to a very large extent in the early months of 1913.

It is quite obvious that February was exceptionally dull, and that the tendency to trade contraction is very marked. We are inclined to the opinion, however, that the dullest period we are likely to have is the present. March is usually the month during which the trend of business for the balance of the year may be outlined with clearness. The bank return just issued shows how rapidly money is accumulating. This does not denote business activity by any means, but an adequate supply of money will materially help to restore confidence. The latter may still be regarded as fugitive so long as we have the Ulster question in its present form. Assuming, however, that nothing untoward develops, it does not appear to The Post that any material circumstance stands in the way of Canada having a normal year.

Three outstanding factors have played during the past few years a very important part in our business health. They are: railroad construction, city building and industrial activity. For the first of these the outlook is now satisfactory. All the larger systems have finances in hand that will enable them to carry out extensive plans for the improvement of their main lines. City building will not progress to the same extent as in the year 1912, but it is quite probable that it will continue as actively as in the latter half of 1913. During the last twelve months the over-extended position of municipalities has been fully liquidated. Their position is now normal. Industrial activity such as experienced during 1912 and the earlier part of 1913 is not likely to be resumed until the turn of 1915. Accumulated stocks are being liquidated and outstanding is being reduced. This policy will be continued during the present year. There should be, however, greater activity in some trades, if the crop promises well, at an earlier date.

With these three factors dominated by conservative influences, general business will not be more than normal during the next few months. If the spring is unfavorable to crops the tendency will be towards further depression than is being experienced at the present moment.

Relief in Garnishee Act

RELIEF is in sight for the retail merchant who under the present garnishee law finds himself balked in the collection of a just debt. Under the present terms in Ontario the salary due a man cannot be attached unless it exceeds twenty-five dollars, and only that portion in excess of this amount. This relieves the debtor, of course, in the great majority of cases except where his salary is paid bi-weekly or monthly. At a conference of retail men with the Attorney-General the former suggested that the $25 amount be changed to $10. In reply to this a Government official suggested a provision whereby fifty per cent. of the salary due, of whatever amount, might be garnisheed in payment. This was favorably received on both sides and may form the basis of new legislation in Canada that will spread to all the Provinces. This would save expensive suits in the Division Court.

A Profitable Convention

THE presence of 400 hard-headed business men at Moose Jaw, attending the annual convention of the Retail Merchants' Association of Saskatchewan, indictates that the problems of the Western retailer are pressing and that the trade is striving strenuously to solve them. This was a large convention. It looks as if the West is more aggressive from the standpoint of organization than the East. Four hundred men is quite an army—from a business standpoint—and the deliberations set forth by our own correspondent in this issue are worth the careful perusal of every member of the trade.

One does not have to read far in this report to see that Credits is one of the biggest questions in the West. Apparently quite a lot of money has been lost by giving indiscriminate credit, and, as this has been common all over the country, the trade will find some valuable hints from the discussion.

Addresses and the subsequent discussion on Costing, Banking, Borrowing, etc., served admirably to develop the knowledge on these things, and they will surely tend to make better and more careful business men of all who heard them. Some merchants make the claim that there is nothing beneficial in organization. But surely a study of the questions considered and the points involved, as contained in the report, will convince the most skeptical that there is something more for us all to learn.

No Need to Worry

CANADIAN retail firms who buy in the British markets have not, in the past few years, found it so easy to get extensions as their accounts fell due as they did in the olden days. The new conditions have been more severely felt in the last few months when business and payments have been quieter in Canada. Because of the long credits easier terms and generally generous treatment many firms in this country got into the habit of leaning on British firms. They have felt that as money was more plentiful in Europe the houses here could afford to wait and Canadian houses were more promptly paid. In the past ten years many British firms have been changed from private to joint stock concerns. The personal and sentimental element has disappeared and in its place has come a strictly business credit and collection department.

On the whole this is much better for us. It is a discipline that will help to make us better business men, in that it will make us more careful buyers and more energetic collectors of accounts owing us. The final result will be that we will do perhaps somewhat smaller volume of business but make a greater net profit, which is what we are all after.

There has been more anxiety than usual among British shippers to Canada as to conditions in the Dominion. We can assure them that if they have been careful in the selection of their customers they can feel perfectly safe. The leading firms in Canada are to-day in a sounder financial condition than in many years. Business has been quieter, but merchants have been most cautious, have economized, and have been most careful in their purchases, their credits and their collections. Finally, we think there has been a marked improvement in the underlying conditions in the past ten days, but all business should go carefully, but aggressively, until the outcome of the 1914 crop is known.

Editorial Briefs

FLY SWATTING time will soon be here.

• • •

THE SLOGAN is now "Clean Up and Paint Up."

• • •

DO NOT lose sales by having Spring stock out of sight.

• • •

ARE YOU making use of the new Parcel Post System?

• • •

WATCH THE markets, many price changes are taking place.

• • •

THE LOCAL zone system gives the merchant a fighting chance.

• • •

THE ADVENT of Spring brings with it a brighter business outlook.

• • •

TOO MANY PEOPLE ARE ready to throw bricks and not enough to throw bouquets.

• • •

SELLING ONE ARTICLE at a loss and making it up on another, is simply robbing Peter to pay Paul.

SALESMANSHIP is making the other feel the same as you do about the thing you have to sell.

• • •

WITH THE advent of Spring, business has shown a marked stimulation. Spring invariably brings optimism in its wake

• • •

OPENING OF Spring means big profits in baseball supplies and all sporting goods generally. Feature the sporting goods department.

• • •

SASKATCHEWAN merchants, it can safely be said, will not lose as much money in the future as in the past. Dealers in other provinces will benefit from a study of their convention proceedings.

• • •

MANUFACTURERS cannot hope to get retailers interested in their products by compulsion. Efforts made to build up a demand from the consumer without appealing to the retailer direct, savors of compulsion.

Complete Canadian Parcels Post Regulations

The Canadian Parcels Post System Came Into Force Officially on the First Day of April Under the Regulations Here Given.

NOTICE is hereby given that the Parcel Post Act assented to 6th June, 1913, will come into force on the first day of April, 1914, under the following regulations:—

Parcel Post Regulations.

1.—Articles of mail matter acceptable at Parcel Post rates include farm and factory products, merchandise of all descriptions such as dry goods, groceries, hardware, confectionery, stationery (including blank books, etc.), seeds, cuttings, bulbs, roots bedding plants scions or grafts, and all other matter not included in the first class, and not excluded from the mails by the general prohibitory regulations with respect to objectionable matter.

Parcels consisting of third class matter may be mailed at parcel post rates, or third class matter rate at the option of the sender.

Parcels containing intoxicating liquors or explosives are expressly prohibited.

2.—The rates of postage on articles accepted for transmission by Parcel Post are as follows:—

(a) Five cents for the first pound and 1 cent for each additional pound or fraction thereof, up to four pounds, and 2 cents for each subsequent pound up to eleven pounds within a radius of twenty miles from the place of mailing, irrespective of Provincial boundaries.

(b) Ten cents for the first pound and 4 cents for each subsequent pound or fraction thereof, for all points in the Province in which a package is posted, outside of the twenty-mile radius.

(c) Ten cents for the first pound and 6 cents for each additional pound or fraction thereof, for all points outside the Province in which a parcel is posted, and beyond the twenty-mile radius, with an additional charge of 2 cents a pound for each Province that has to be crossed to the destination of the parcel, not including the Province in which it is to be delivered up to a maximum of 12 cents a pound.

The three Provinces, Nova Scotia, New Brunswick and Prince Edward Island, are to be considered as one zone.

An additional charge to meet the extra cost of transportation will be made on parcels addressed to or posted at offices in certain outlying districts when such parcels have to be conveyed more than 100 miles by a continuous stage service, such districts to be designated by the Postmaster-General.

The charge on any parcel should not be greater than 1 cent an ounce.

Tables of rates for the several Provinces as given in the rate cards printed for distribution, will be found on pages 9, 10, 11, 12, 13, 14, 15 of these regulations.

3.—The postage on Parcel Post packets must be prepaid by means of postage stamps, securely affixed to the parcels. An insufficiently prepaid Parcel Post packet is forwarded to destination subject on delivery to payment of double the deficiency provided at least one cent is prepaid. After the additional postage repuired on any short paid parcel has been colected from the addressee "postage due" stamps are to be affixed to the parcel and canceled by the Postmaster.

Parcel Post packets totally unpaid will be sent to the Branch Dead Letter Office.

Franking of Parcel Post packets is expressly prohibited.

4.—A Parcel Post packet may be insured within Canada up to an amount of $25 or the actual value of the contents, when less than that amount, upon prepayment of a fee of 5 cents in postage stamps and up to an amount of $50 or the actual value of the contents, when less than that sum upon prepayment of a fee of 10 cents in postage stamps. This fee must be prepaid, in addition to the ordinary postage, by means of postage stamps, which the sender must affix to the cover.

In the accompanying article a complete list of regulations governing the Canadian Parcel Post System is given, including rate cards for all the Provinces. We believe this is the first complete set of regulations published by a Canadian trade paper. A rate card for each Province is given, and Canadian hardwaremen who wish to make use of Parcel Post can find full information regarding the new system in the accompanying article.

A parcel intended for insurance should not be dropped into a box or receiver. It should be marked with the word "Insured," and with the amount of the insurance fee the sender is paying, thus "Insured 10 cents," and be handed into the post office or to the rural carrier and a certificate of posting obtained, bearing an acknowledgment that an insurance fee has been paid.

The onus of properly enclosing and packing a parcel for insurance rests with the sender, the Post Office assuming no liability for loss arising from defects which may not have been observed at the time of posting.

Indemnity will be paid to the addressee, or at the request of the addressee, the sender, provided claim is made to the department within one year of the date of posting upon receipt of sworn statements of the persons concerned:—

(a) That according to the best of their knowledge and belief the insured parcel has been lost or its contents damaged in the mails.

(b) As regards the value of the contents of the parcel or the damage sustained.

(c) As regards the ownership of the parcel.

It must appear that the loss or damage did not arise wholly or in part from the fault of the sender, as, for instance, from insufficient packing, inadequate fastening, loss of "tie-on" label, etc. The indemnity paid will not exceed the value of the contents of the parcel lost or the damage sustained. The right is reserved of reinstating the contents of a parcel instead of giving pecuniary indemnity.

In the case of damage the parcel must be retained for the purpose of enquiry, as nearly as possible in the state in which it was delivered. If complaint is made that the contents of a parcel have been lost or abstracted, the cover must be produced.

Indemnity for damage to articles of a fragile nature, will be given only in those cases in which the parcel is conspicuously marked with the words "Fragile with care."

Parcels containing eggs, fish, meat, fruit, vegetables, glass, crockery, greases, semi-liquids, liquids or any articles of an exceptionally fragile nature cannot be insured.

Indemnity will not be given for loss of coin or bank notes.

Indemnity will not be given for injury or damage consequential upon i.e. indirectly arising from the loss damage, delay, non-delivery or mis-delivery of any article sent by Parcel Post.

Indemnity will not be given in the case of a parcel on which the insurance fee has not been paid.

Indemnity may be refused for loss or damage, on any ground on which exemption from legal liability may be claimed by a common carrier.

An insured parcel that cannot be delivered within Canada will be sent to the Branch Dead Letter Office.

Parcel Post Packets Must Not Be Registered.

5.—Parcels must be prepared for mailing in such manner that the contents can be easily examined.

6.—It is desirable that the sender's address should appear either inside the parcel or on the cover. This must be kept distinct from the address proper.

7.—Parcels are, when redirected, chargeable with additional postage at the rate which would have been chargeable had they been originally mailed from the office of re-direction to the new address except in cases where the original and the re-directed addresses are both within the delivery of the same Post Office.

8.—The limit of weight for a Parcel Post packet is eleven pounds, and the general limit of size is thirty inches in length by one foot in width or depth, but parcels will be accepted up to 3 ft. 6 in. in length, provided that the combined length and girth do not exceed six feet. For example—a parcel measuring 3 ft. 6 in. in its longest dimensions may measure as much as 2 ft. 6 in. in girth (i.e. round its thickest part); or a short parcel may be thicker; thus if the length is not more than 3 ft. the girth of the parcel may be 3 feet.

9.—When practicable Parcel Post parcels must be sent in covers open at the ends, and in such manner as to be easy of examination. But flour, drugs and such like articles, which cannot be sent in covers of this kind—but such articles only—may be posted enclosed in boxes, or in bags of linen or other strong material, fastened in such a manner that they may be easily opened, so as to enable the officers of the post office readily to satisfy themselves as to the nature of the contents. If paper bags or covers are used for enclosing flour or other similar matter, they must be of extra quality and strength to resist friction and pressure in the mails, and prevent the escape of the contents.

10.—Any staple article of use or consumption, properly transmissible by post, contained in the original unbroken package and with proper descriptive label, may be forwarded by Parcel Post, though the tin or case in which it is enclosed may not admit of being opened in course of post, if posted by parties known to be engaged in the manufacture or sale of the articles in question and who vouch that the contents are precisely as described on the label.

11.—A parcel may contain invoices and accounts provided they relate exclusively to the contents of such parcel; it is also permitted to enclose a card or slip of paper giving in a brief manner necessary directions for the identification or treatment of the article or articles contained in the parcel. Care must be taken not to abuse this privilege by converting such notes or marks, designed solely for the facilitation of business between the sender and addressee, into what might properly be called correspondence. A parcel containing a letter or any writing intended to serve the purpose of a letter in the ordinary sense will become liable to letter postage.

12.—When several separate articles are enclosed in a Parcel Post packet there is no objection to each bearing a distinguishing number, so as to enable the sender to give directions by letter (sent of course separately and duly prepaid) respecting the several articles which the parcel contains.

13.—Any person who wishes to mail a large number of parcels, whether on a particular day or at regular or irregular intervals, will facilitate the work of despatch if he will give the office where they will be posted early information of the number of the parcels, their average weight and the dates and times at which he proposes to send them. He will also consult the convenience of the Post Office by sending the parcels to the post in batches, beginning as early in the day as possible.

14.—Parcel Post packets are subject to the general prohibitory regulations excluding from the mails everything liable to destroy, deface or otherwise damage, the other contents of the mail bags or injure the person of any officer or servant of the Post Office, as well as all obscene or immoral matter.

15.—Liquids, oils and fatty substances, put up in accordance with the following regulations, are not excluded. When in glass bottles or vials, such bottles or vials must be strong enough to stand the shock of handling in the mails, and must be enclosed in a wooden, heavy cardboard or papier mache block or tube not less than three-sixteenths of an inch thick in the thinnest part, strong enough to support the weight of mails piled in bags and resist rough handling; and there must be provided between the bottle and its outer case, a cushion of cotton or sponge material sufficient to absorb the liquid, etc., in case the bottle should be broken, the block or tube to be impervious to liquid (including oils) and to be closed by a tightly-fitting screw-lid of wood or metal with a rubber or pad so adjusted as to make the block or tube water-tight and to prevent the leakage of the contents in case of breaking of the glass. When enclosed in a tin cylinder, metal case or tube, such cylinder, case or tube, should have a screw-lid with a rubber or cork cushion inside in order to make the same water-tight, and should be securely fastened in a wooden or papier mache block (open only at one end) and not less in thickness and strength than above described. Manufacturers or dealers intending to transmit such articles by Parcel Post or as samples, in considerable quantities, should submit a specimen package showing their mode of packing to the postmaster at the mailing office, who will see that the conditions of this section are carefully observed.

16.—Specimens of diseased tissues, when carefully enclosed in specially constructed double tin cases, closely packed with absorbent matter, and with closely fitting screw caps, may pass at Parcel Post rates, addressed to Provincial Boards of Health and Public Laboratories.

17.—The following articles in glass, viz.: Eye-glasses, spectacles and microscopic slides, may be forwarded by Parcel Post if put up in such a manner as to admit at once of easy inspection and to guard against injury to persons handling the mails.

18.—Parcels Post packets containing anything of a fragile nature should be marked "Fragile with care" and parcels containing articles of a perishable nature such as fish, fruit, meat, etc., should be marked "Perishable." Parcels sent by mail should in all cases be substantially and securely packed so as to preserve the contents from loss or damage and prevent injury to the mails. The department desires to co-operate with the public in seeing that special attention is paid to the important matter of packing, particularly with regard to parcels containing matter of a fragile or perishable character or of a nature to destroy or injure the other contents of the bags or sacks in which they are sent forward. In order that proper precaution may be exercised in this particular persons desirous of transmitting articles by Parcel Post are advised to consult the postmaster as to the proper method of packing in all cases.

As the safe transit of eggs is a matter of some difficulty shippers are advised to adopt the following method of packing: Use a wooden, papier mache, or other box of a rigid material with a well-fitting tightly adjusted lid, wrap each egg separately in newspaper or other protecting material, place the eggs on end and fill up the vacant spaces in the box with newspaper or other packing material, so as to prevent the eggs from striking together or against the sides, top or bottom of the box; mark the parcel "Eggs."

Parcels containing goods likely to spoil within the time reasonably required for transportation and delivery must not be accepted for mailing.

19.—Postmasters must exercise the greatest possible care to see that all parcels accepted for transmission by Parcel Post conform in every particular to the requirements of these regulations. This applies with special force to parcels containing perishable goods or fragile articles.

20.—Requests for direct return are

PARCEL POST REGULATIONS.

(Continued from page 51.)

recognized on Parcel Post packets addressed to a place in Canada, and parcels bearing the address of the sender may also be returned direct after being held fifteen days Parcel Post packets so returned are subject to a charge equal to the original postage charge. This charge is to be markod by the office returning the parcel and collected from the sender before delivery by the office to which it has been returned, "postage due" stamps for the amount collected being affixed to the parcel and canceled by the postmaster.

21.—After a parcel has been delivered to the person to whom it is addressed it cannot be returned to the sender, **unless the person returning it pays the necessary return postage.**

22.—The Postmaster-General reserves the right to refuse to accept for transmission by mail, grain or any other commodity shipped in excessive quantities which might interfere with the transportation of first-class matter, or other articles such as those enumerated in paragraph 1.

The ability to imagine has, above all other influences, determined the progress and station of men. It is the root of all love, ambition, effort and achievement, and is the first of the creative faculties.

A Thousand Miles of Wealth

An Empire Will Grow Up in Canada in the Peace River District

By H. G. BURY

Editor's Note. — Although the population of Canada is not large, she boasts of an area where distance almost overpowers one's sense of imagination. Canada, which formerly covered only Ontario and Quebec, each in themselves much greater than many continental countries with a wonderful history, at the end of 1913 is finding an active life all the way from its North-west dip into the Arctic Circle to the awakening valleys of the St. John. This article will open the eyes of foreigners and Canadians themselves to some of the immense possibilities in the Peace River district. On the Mackenzie River a line of steamships now does a thriving business.

THERE are very few Canadians today who have been able to form any definite idea, either by personal observation or by the perusal of authentic literature, of the vast country north and west of Edmonton.

One is apt to dismiss the consideration of this subject with the observation that the area referred to, comprises a large and barren wilderness of treeless wastes and unproductive soil, but such an opinion is very far from the actual truth.

It is quite correct to assume that the districts contiguous to the shores of the Arctic Ocean are largely of this character, but there is an almost limitless area of country between Great Slave Lake and Edmonton which offers many opportunities for settlement.

In order to grasp an idea of the size of this area it is only necessary to say, that the distance from Edmonton to Fort Providence, which may be termed the most northerly limit of land suitable for settlement, is 1,007 miles, and that the area stretches westward to the Rocky Mountains and eastward to the boundary of the Province of Alberta.

Encampment of the Yellow Knife Tribe at Fort Resolution, on the Great Slave Lake.

A great part of this area consists of excellent stock raising country, especially around the valleys of the Peace and the Slave Rivers, one area in particular, i.e., between Hay River and Slave River being exceptionally well suited for this purpose, while the country between Edmonton and Athabasca Lake offers good prospects for mixed farming.

The Peace River country and also that district lying between Edmonton and Athabasca Landing has already been occupied by numbers of good settlers, who find no difficulty whatever in growing crops of cereals and roots, which, owing to the fertile soil and longer duration of sunlight during the summer, are equal to those produced further south.

The summer is appreciably shorter, but this handicap is offset by the quicker growth owing to the longer hours of sunlight.

In proof of the extraordinary fast growth that takes place in the north during the short summer, it might be well to mention the success of the Government Experimental farm at Fort Simpson situated 1,170 miles north of the city of Edmonton.

Here, wheat, oats, barley, rye, potatoes and vegetables have been very successfully grown and matured. A sample of wheat sent to Edmonton in 1911 graded No. 1 hard, and in 1913 a sample of oats was sent out which weighed 38 lbs. to the bushel. Even at Fort Good Hope only 12 miles from the Arctic Circle and at Fort Wrigley, 1,300 miles north of Edmonton, the luxuriant growth of grass is phenomenal.

It is not, however, in agricultural possibilities alone that this vast country holds such rich prospects.

Rich in Minerals.

Already oil has been located in several places along the valley of the Athabasca River, in the neighborhood of Fort Murray and Fort McKay, and it is not unlikely, judging from reports of the experts who have visited the district, and from the geological indications, that there will soon be discovered one of the greatest oil fields or reservoirs in the world.

Crops of oats growing at Fort Simpson, Government Experimental Farm.

Mission Garden at Fort Providence.

An Eskimo camp at Fort McPherson, where human nature shows itself under an exceedingly difficult environment.

The oil pockets now being opened comprise merely the small supplies stored in the limestone domes, that are outcroppings of the anticlines, and when the main reservoir is tapped, an inexhaustible supply of crude oil will be available, which will be one of the most valuable assets of Northern Canada.

An Eskimo family at Fort McPherson.

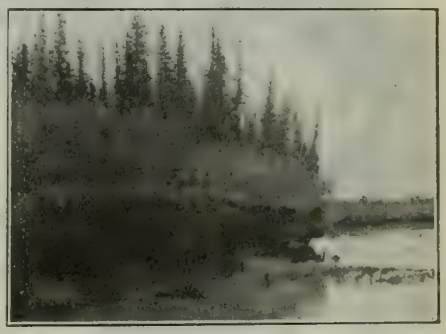
But the mineral wealth of this far northern country is not restricted to oil.

The famous Coppermine Valley, situated east of Great Bear Lake, includes a district rich in native copper and ore. Travelers in this area bring back with them numbers of native copper implements such as knives, etc., which are used by the native Indians and the Eskimo, and there is not the least doubt, but that as soon as the Hudson Bay sea route becomes an accomplished fact, so soon will be found capitalists prepared to exploit the riches in copper which this district possesses.

Other mineral districts, such as the coal reefs near Fort Norman, gold around the shores of Lake Athabasca, sulphur near Hay River on Great Slave Lake, and salt in the neighborhood of Fort Smith, have not been examined sufficiently well to reveal either their value or extent, but serve to indicate that the country possesses a range and variety of minerals comparable with any other section of the Domion.

Timber Near Arctic Circle.

The timber wealth of the North is also of considerable value. Vast forests of spruce cover the areas between Slave Lake and Edmonton, and the pulpwood from this source will be almost impossible to estimate.



Spruce timber of good size is to be found 250 miles within the Arctic Circle, especially along the Peel River, the most northerly tributary of the Mackenzie River, for although there are great areas of treeless country, notably the Barren Lands, lying south and east of Great Bear Lake and along the shores of the Arctic Ocean, yet it is totally incorrect to assume that the North country is entirely of this character.

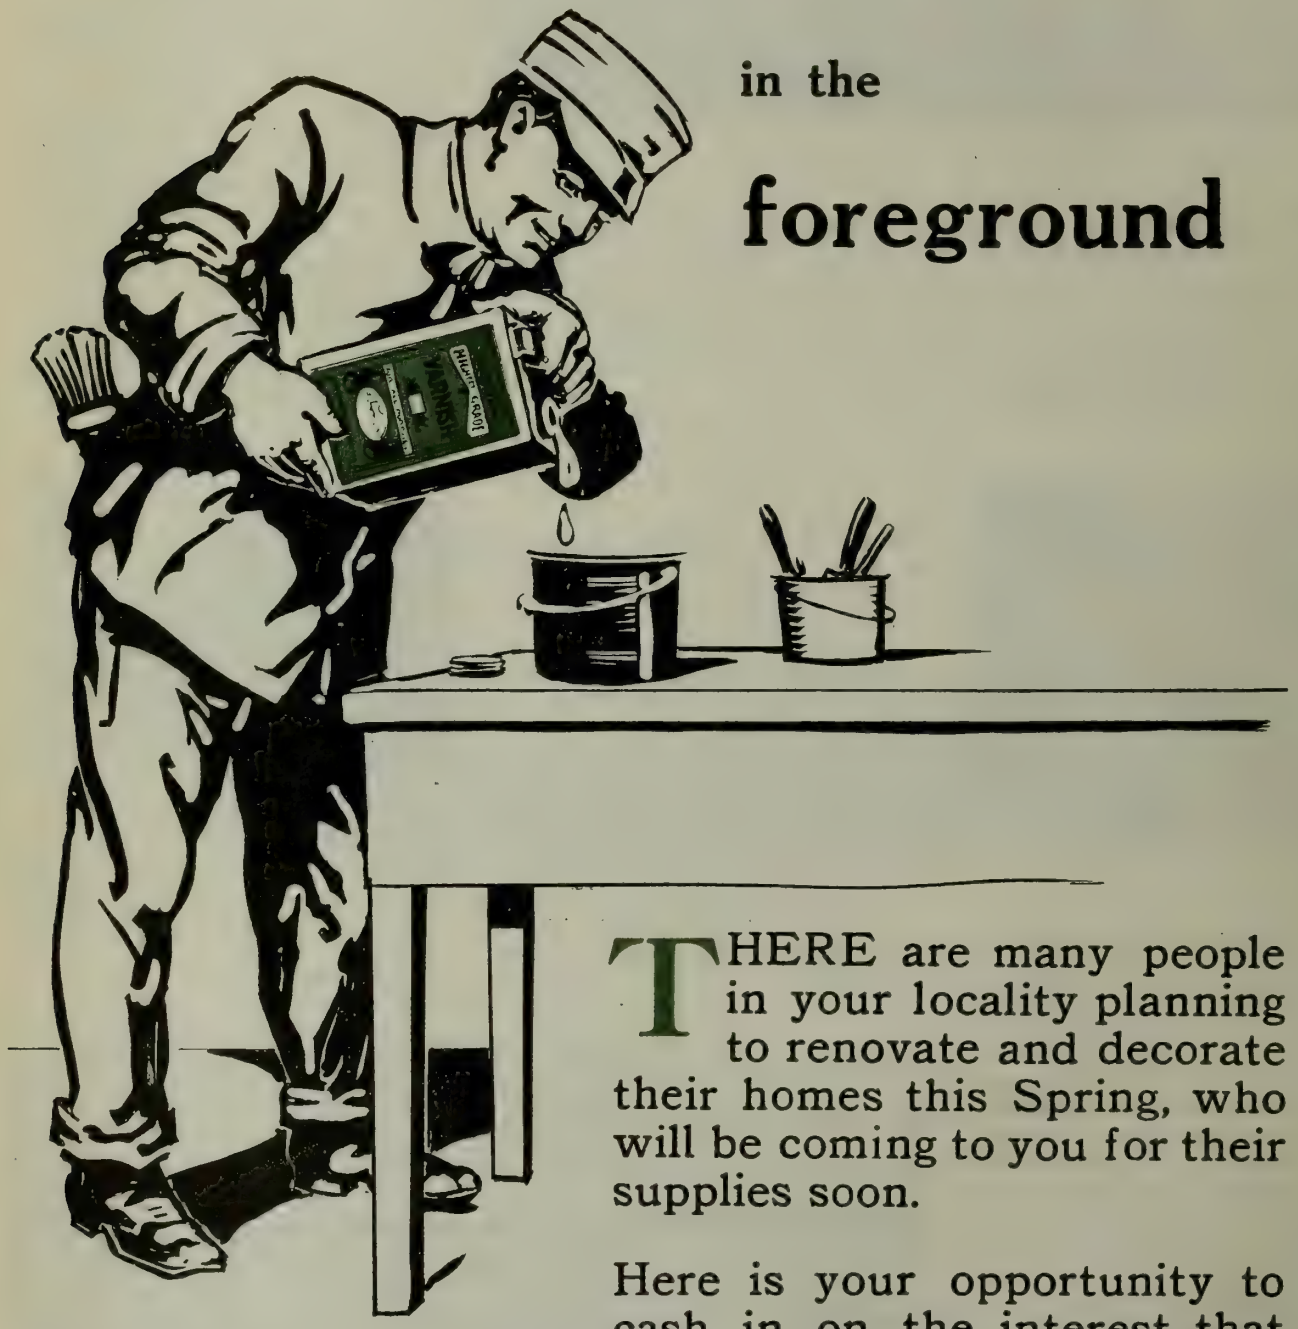
At the present time and for the past 300 years, this country has been the great source of supply of the most valuable furs caught in the Dominion probably in point of both quantity and quality, and this class of wealth alone is practically inexhaustible.

The great problem connected with the north is the same old question that all new countries have to face, i.e., that of transportation facilities. At present the only route of entry into this country is by boat via the Athabasca, Slave and Mackenzie Rivers, and although there is uninterrupted navigation from Fort Smith to the Arctic Ocean, a distance of 1,454 miles, yet before Fort Smith is reached there are 92 miles of rapids on the Athabasca River between Athabasca Landing and Fort McMurray, and 16 miles of cascades on the Slave above Fort Smith. Once these obstructions are overcome, all the vast resources of the north become available.

The large inland lakes of Athabasca, Great Slave and Great Bear teem with the best varieties of food fishes, and the transportation problem when solved will realize the value of this source of wealth.

The railroad is already built to Peace River crossing on the west, and is surveyed to Fort McMurray, so that it is only a question of time before transportation into the north will no longer be attended with the difficulties that are attached to it at the present time.

Spruce timber, Peel River, 300 miles within the Arctic Circle.



The only means of getting into the country in the summer is by Hudson Bay Company's steamer, and in the winter by dog train.

(Continued on page 63.)

Eskimo whale boats on the Peel River.

Now is the time to put GLIDDEN'S GREEN LABEL VARNISHES in the foreground

THERE are many people in your locality planning to renovate and decorate their homes this Spring, who will be coming to you for their supplies soon.

Here is your opportunity to cash in on the interest that has been aroused in Glidden "Green Label" Varnishes and JAP-A-LAC. No need to go to a great deal of trouble in order

to bring them to the favorable attention of your customers; that has already been done.

Simply let people know that you carry Glidden products, that's all that's necessary. Display Glidden's "Green Label" Varnishes in the window and on the counter, along with a good showing of JAP-A-LAC (be sure to have some booklets handy). Arrange a few brushes neatly. Then watch and see how quickly the sales come in It's just a question of doing the right thing at the right time.

Glidden's "Green Label" Varnishes make fast friends for stores that sell them. They dry with a hard smooth surface like glass; never brittle; tough as rubber but never gummy.

Write for details of our special co-operative selling plan. It will interest you because it's designed to benefit you, your business and your pocket.

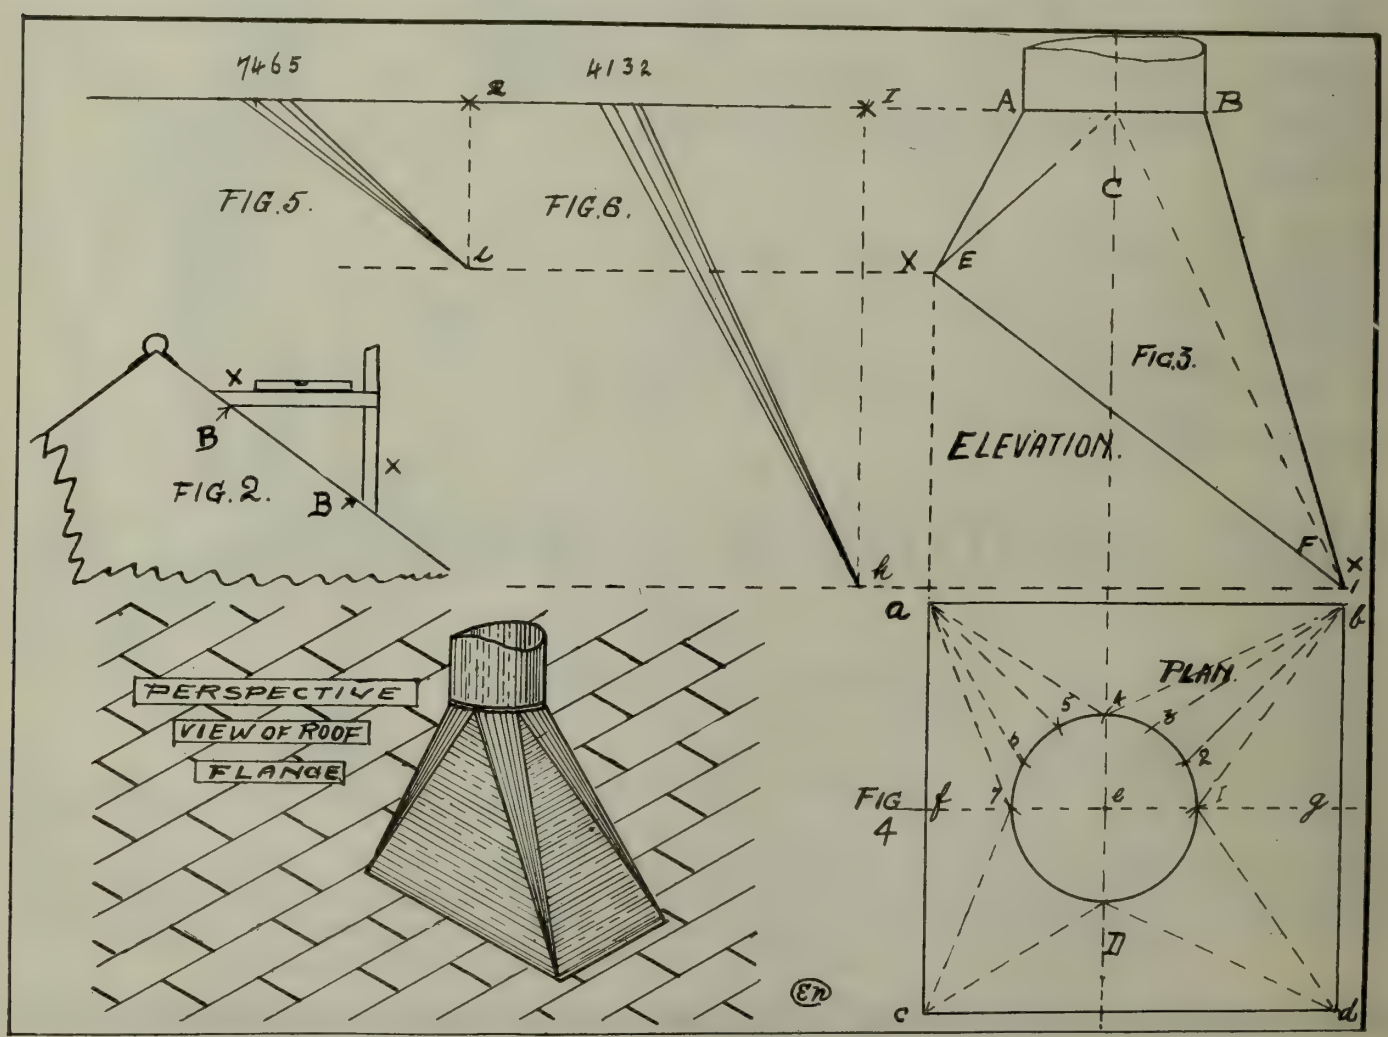
Problems in Sheet Metal Work

SOME time ago we showed how to develop pattern for a register box, or a round to square. In this issue we are about to show a pattern which is in many ways a similar kind of a pattern except that the base is not straight, but rather at an angle as shown in perspective drawing, Fig. 1. Such are known as tapering roof flanges for inclined roof.

The first thing to do is to determine the pitch of the roof. If the roof is an old one, or already built, and there is no plan showing the pitch, a very easy way is shown how to get the proper pitch as seen in Fig. 2.



Place two pieces of lumber 1 in x 2 and long enough to manipulate as shown X.X. Then by using the square and level in the way described, the pitch is determined at B.B., placing the level on horizontal piece, then B.B. will give the correct bevel required.

Now to proceed with the development of pattern, assuming line X. & XI. in Fig. 3 to be the slant which the flange is to have so as to fit the roof, and A. B. the diameter and position of pipe, erect a vertical line C.D., which must be centre of pipe. Next draw the two line down from A. B. to X. & XI. Having done so erect vertical slanted dotted lines from XI. and X. to centre of solid line A. B. We have now got a true elevation plan of the whole flange. We will now proceed to develop Fig. 4, by forming a square a.b.c.d. being formed by extending downward from E.F. in Fig. 3, and squaring the results as shown in Fig. 4, then intersect this square in centre horizontally as shown at f.g. resulting in getting the centre shown at e., from this centre draw a circle which will be the exact diameter of the pipe, and at the same time establishing the position of pipe in the flange.

Next space off as shown in 1, 2, 3, 4, 5, 6, 7, all of which must be perfectly equal, having done so, draw the dotted lines as shown a4. a5. a6. a7., also b4. b3. b2. b1., thus ending development of Fig. 4.

We will now turn to Figs. 5 and 6. First extend the horizontal lines A.B. and another line from XE. and XI., Fig. 3, as shown, the top line solid, the rest dotted, then draw vertical dotted lines downward from line at top as shown at XI. to h. and Fig. 6, X2 to i., Fig. 5, we will now proceed to determine the true lengths of slant lines by placing compass point at bI., Fig. 4 and transferring this to horizontal line Fig. 6. Next b2, b3, and b4, as shown 4, 1, 3, 2, then and repeat the operation in developing Fig. 5, by using a7, a6, a5, a4, from X2, giving 7, 4, 6, 5, as results, and erecting slant lines from i to the latter numbers.

NOTE.—This problem will be concluded in our next issue.—Editor.

Letters to the Editor

These columns are open to contributions upon any topic of interest to the trade, it being understood that the views expressed are those of the contributors, and do not necessarily imply editorial indorsement. Names of contributors will be withheld if desired, but name of writer must accompany correspondence as an evidence of good faith.

POULTRY NETTING AND M. O. HOUSES.

Tillsonburg, Ont.,
March 30th, 1914.

Hardware and Metal,
Toronto,

Dear Sirs:—

In your issue of Feb. 28, you published a letter "Brick Bats from an Association Member" written by me and read at the Ottawa Convention, and to prove one of the statements made in that letter I would like to call the attention of every retail hardwareman and especially the heads of the Retail Hardware and Stove Dealers' Association; to the poultry netting situation as it is to-day in Canada. Below I give you the new Canadian "Supposed" cost less the 60% discount f.o.b. London, or Hamilton, and the selling price as appears in a Toronto mail order spring catalogue:

Size.	Canadian Price less 60%.	Catalogue House Price.
2 x 19 x 12	.72	.75
2 x 19 x 18	1.06	1.05
2 x 19 x 24	1.36	1.45
2 x 19 x 36	1.90	2.15
2 x 19 x 48	2.48	2.90
2 x 19 x 60	3.08	3.35
2 x 19 x 72	3.68	3.95

Add the freight to the Canadian cost and you will see that if this catalogue house buys netting in the regular way they are selling some sizes at less than cost. If they are selling same at a profit they are buying same at less than 60% discount, and some Canadian manufacturer or jobber is not doing the fair thing with the retail trade.

Why should we protect Canadian manufacturers who allow their goods to be marketed in this way. The writer was the direct means of the new lower prices on netting and by importing several hundred rolls for some of our retail friends we have put them in a position to meet this catalogue competition. It is now up to the manufacturers to right this evil or up to the heads of the Retail Hardware Association to investigate so we can all buy Canadian netting on the level for another year or all get together and import netting so we can meet any competition.

Mr. E. C. Simmons, the veteran hardwareman once said: "A jobber's first duty is to help his customer to prosper." If the above schedule shows the profits the Canadian manufacturers and jobbers want us to prosper on, I can see where a lot of us will have our application for acceptance to some House of Refuge.

Yours very truly,
W. G. POW.

A LETTER FROM THE PRESIDENT.

The following letter from W. F. Macpherson, Prescott, Ont., President Ontario Retail Hardware and Stove Dealers' Association expresses his opinion of the Annual Spring Number of Hardware and Metal.

Editor,
Hardware and Metal,
Toronto, Can.

Dear Sir:—

I was very much pleased to note in your Annual Spring Number the regulations governing the sale of arms and ammunition in Canada. This is certainly of great value to every hardware dealer, and I thank you for following out my suggestion. I might say that your special number is indeed a great credit to your firm, and contains a great many items of interest.

I wish you continued success.

Yours truly,
W. F. Macpherson,
Pres. O.R.H. & S.D.A.

FROM A MANITOBA MERCHANT.

Hardware and Metal,

Dear Sir:—

A Western merchant writes in a recent issue of your publication, pointing out that the T. Eaton Co. are selling certain articles retail at the wholesale price. He asks what merchants think of it.

Well, from my standpoint the question is: what are merchants going to do about it? The Eaton people have been doing that sort of thing for years and there is no use denying it and they will continue to do it whether we like it or not. Only two ways have ever been suggested to meet the case. One is that the smaller dealers combine to boycott the manufacturer who sells Eaton at a lower price than he does to us. That has never been seriously considered because the manufacturer in many cases sells Eaton his whole output, and therefore does not care a snap for any other merchants on the map. The other is, I think, more practical; let the smaller dealers join hands to form a co-operative buying association. Then meet Eaton on his own ground—and beat him out at his own game. Why such action has not been taken long ago I fail to understand. The details of a buying association should not be hard to work out. To my mind this is the only possible way to deal with the question. Every man knows that the big buyer gets the low price and every man will admit that probably he should.

Yours truly,
Manitoba Subscriber.

* * *

TWO OF THE MANY.

St. Catharines, Ont., Mar. 27.

Hardware and Metal,
Toronto, Can.

Gentlemen:—

We write to congratulate you on your excellent Spring Number just received.

The articles are all good, and contain many valuable suggestions for the up-to-date merchant. The classified list of advertisers is very complete and will be very useful.

We find your market reports quite reliable and frequently make use of them. Wishing you continued success.

Yours truly,
Watts & Bates,
A. M. Watts, Pres.

* * *

London, Ont. Mar. 25.

Hardware and Metal,
Toronto, Ont.

Gentlemen:—

We have pleasure in extending to you our compliments on the excellent make-up of your Spring Number. It certainly does you infinite credit.

Yours truly,
The McClary Mfg. Co.

Hardware and Metal's Plan for a "Clean-Up, Paint-Up," Campaign

Object of "Clean Up and Paint Up" Movement

The idea is to have Canadian cities and towns each year set aside a week—between May 1 and May 15—for a general public and private "Clean Up" in their section; to engender a spirit of enthusiasm in the public mind by advertising extensively the five-word slogan, "Clean Up and Paint Up." Everybody, old and young, to be asked to lend a hand for a few hours at least, to help put every street, alley, yard, cellar, passage-way, back lot, and corner in good trim, and to make conditions such that we will have a brighter, cleaner and more wholesome place to live in. The "Clean Up and Paint Up" Movement promotes cleanliness, thrift and civic pride.

THE public needs rousing on the question of spring cleaning up.

When the march of the seasons brings another spring along with its attendant release from the fetters of ice and snow, ushering in days of bright sunshine, the need for a general cleaning up of the home becomes very marked. Not only is house-cleaning necessary inside, but even more so is it necessary outside. The snow covers a multitude of sins against eyesight and sanitation. When the winter's covering has shriveled up in the rays of the spring sun, the sight that greets the eye is appalling. Here are last fall's cigar "butts," the remnants of countless newspapers, the odds and ends of five months' accumulation. Until rake and spade have been brought out and used in earnest, the average yard looks like a civic dump on a small scale.

And there is another phase of spring which cannot help but appeal to everyone. The house that needs paint never seems to need it so badly as during early spring days. It may stand up gaunt and weather-beaten and badly blistered during the winter without its dilapidation being conspicuously noticeable but just as soon as the buds begin to appear and nature takes on the garish garb of spring, lack of paint becomes the most glaring and noticeable of faults. The dingy house is out of tune with nature. It is the one marring feature.

This was perhaps the primary reason why spring became the recognized time for painting. More houses are painted at this season of the year than at any other time. There are, of course, other reasons of a more practical nature—the desirability of putting property into good shape after the wear and tear of winter being a prime consideration.

But the practice of "painting up" in spring is not nearly as general as it should be. For one house which is given a fresh coating of paint, a dozen which need it just as badly, are left to suffer depreciation through the influences of sun, rain and wind. To those who know, paint is a preservative of particular potency. It is a sure form of insurance against decay. The house which is kept well painted will continue in good repair and attractive long after the neglected house has fallen into a condition of dilapidation. A dollar spent in house paint saves many in repairs as well as lengthening the life of the property.

The wise householder will devote a full week each spring to the work of cleaning up his premises and to painting wherever possible. The advantages that accrue to him as an individual are not entirely from the standpoint of improved appearance. Health demands that the home premises be kept in the most sanitary condition. Disease germs breed in garbage piles and in accumulations of refuse. Nothing is more conducive to sickness than yards which are not kept neat and clean.

There is another side of it which should appeal to the householder as well. The welfare of the community demands that each individual should contribute towards keeping the city or town attractive. What better advertisement can a place have than neat homes, well trimmed lawns and orderly yards? A town that presents a freshly-painted front to the visitor creates the best possible impression. "Here is a place where I would like to live," is the mental commentary of the visitor. On the other hand the worst possible "knock" that can be administered to a town is when the householders fail, through lack of personal and civic pride, to keep their homes in good condition. There are dozens of towns that everyone knows in this category. You can picture one of them in a moment—rows of dilapidated houses, with rickety fences and unkempt lawns, paint blistering from the woodwork and giving that dismal air of shabbiness that so offends the eye, muddy streets, ragged rows of trees and so on. Would you ever think of going to live in a place of that kind? Would you ever refer to it in terms other than of indifference or even contempt?

And so the need for a thorough spring "clean up and paint up," is not purely personal or individual. The welfare of the community is concerned. Consequently the question should be treated by the community as a whole.

Despite the importance of the matter, it is exceedingly hard to get the average individual stirred up. Man is sometimes a lazy animal. Spring arouses in him the desire to get up at 4 o'clock in the morning and go fishing, but it does not create any very keen desire to clean out the ash pile or rake the back yard. His intentions are always good. He is going to do it to-morrow or next Saturday afternoon. And sometimes it runs on from one postponement to another until finally the weather gets too hot for manual labor. For every industrious soul who takes an interest in his garden to the extent of putting in many laborious evenings straightening up, there are a dozen who take no active interest at all.

And so it has become quite a problem in every community to get the citizens as a body stirred up to taking an interest each spring in the problem of cleaning up.

A solution has been found in many cities in the United States. By dint of much newspaper publicity the interest of the public is aroused in the subject of spring cleaning. The council sets aside a certain week, generally late in April or early in May, as a special "clean up and paint up" week. It is impressed upon all and sundry that their duty to the municipality enjoins upon them the task of straightening up things during that week. Every means is taken of "boosting" the idea. Not only do the papers talk spring cleaning but the merchants feature the idea in their advertisements and in the store windows. The pulpits sometimes help along the good work.

Wherever it has been attempted the idea has worked out with conspicuous success. The citizens as a whole have entered into it with surprising vim. The week set aside is marked by a general tendency toward the improvement of homes. The rake, the spade and the paint brush are brought into requisition. The smoke of bon-fires rises from every back yard. The garbage wagons are loaded to the brim with the refuse of the long winter's accumulation, and at the end of the week the difference that has been wrought is little short of amazing.

Why cannot the same idea be worked out in Canada?

Hardware and Metal suggests it as a duty incumbent upon each retail merchant and newspaper to start an agitation at once for a clean-up and paint-up campaign.

If the newspapers in each community were to talk up the idea, starting at once, and continuing to talk spring cleaning, it would not take long to arouse public interest. If the press could be interested, the first week of May would find the majority of householders in Canadian cities and towns actively engaged in the work. To go back a step, if each retail merchant were to go to the trouble of calling on the newspaper editors, to point out why the press should take up the idea, it would not be long before the interest of the press was aroused.

Therefore, the initial step rests with the retail merchant, particularly the hardwareman, who has a deeper interest in the subject, perhaps, than other merchants. Mr. Hardwareman, this is a direct message to YOU. It will be to YOUR interest to take a copy of this article to the editor of your local newspaper and show him why his paper should begin at once an active clean-up and paint-up campaign.

The plan of action, briefly, would be as follows: Get the newspapers interested and arrange to have them run something about the subject every day. Then get some members of the local council interested, and through the medium of their influence have an ordinance passed setting aside one week, either the first or second in May, as **Clean-up and Paint-up week**. If the papers do their part, the rest will be comparatively easy. The public will become interested, civic loyalty will be fanned into a blaze, and when the week specified comes around every worthy citizen will be ready with spade, rake and paint brush to do his share of the work.

The idea is not a new one in Canada by any manner of means. It has been worked in a number of cities in a **limited** degree, but with **unlimited** success. Hardware and Metal believes, however, that the time has now come when the idea should be worked out in an **unlimited** degree in every city, town and village of Canada. If public interest can be aroused to this extent, the sum total of resultant benefit will be incalculable.

In order to help along the cause, Hardware and Metal proposes to supply the ammunition of war, in the shape of publicity material. Each issue during the present month will contain several pages of matter devoted to the **Clean-up and Paint-up** idea — matter which the newspapers could use in their campaign to arouse the interest of the public. The articles will include all phases of the subject—the necessity for Spring cleaning, the best way of doing the work, the preservative qualities of paint, and so forth. These articles will be written with a view to republication through the daily press, and their use will be gladly welcomed.

Why not try the plan out NOW, Mr. Hardwareman?

Take this issue, before your resolution cools, to your local editor. Point out to him the advantages of the scheme from his own standpoint—the local interest that would attach to the campaign, and consequently to his paper. Show him what the welfare of the community demands. Finally assure him that he will not have to write all the matter himself, that Hardware and Metal will supply suitable matter for the purpose.

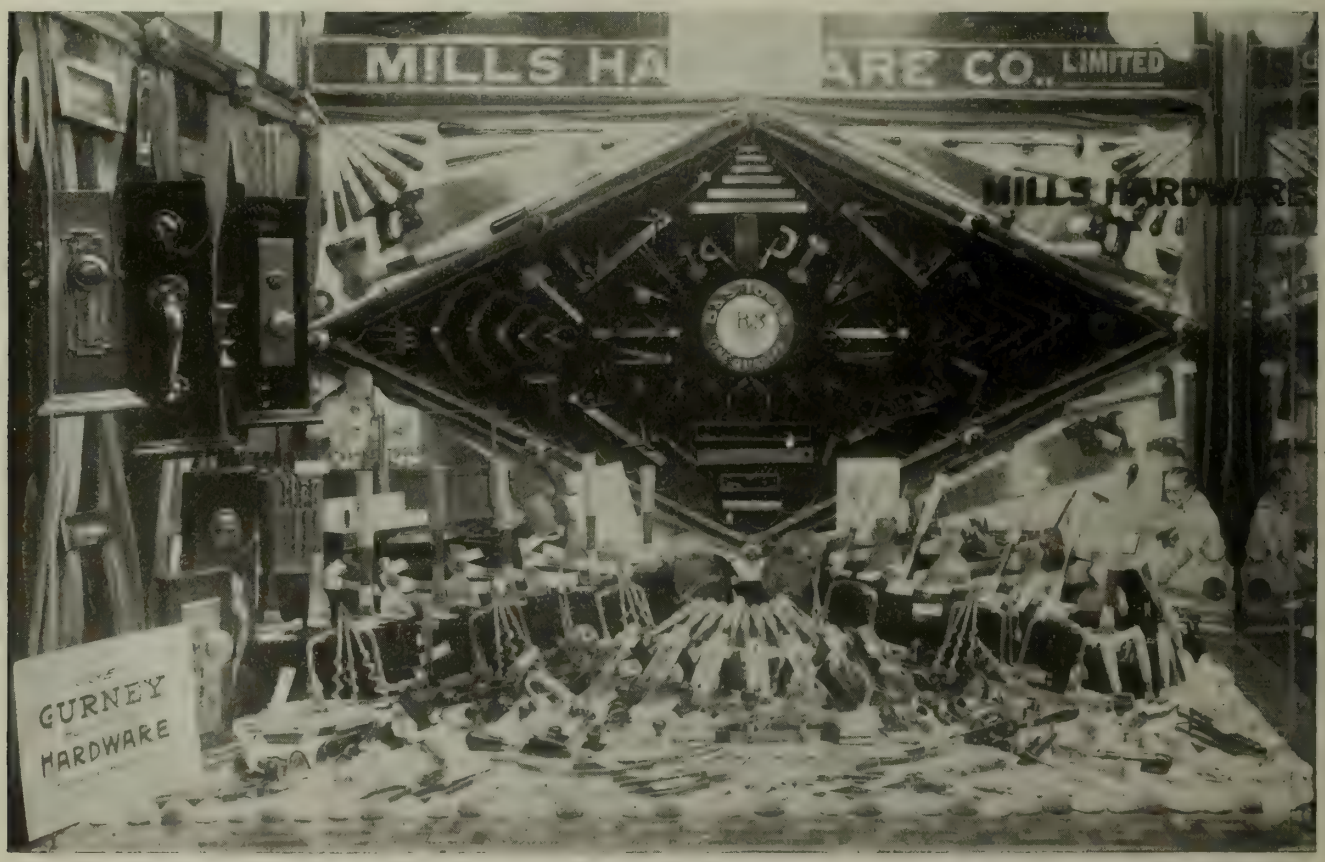
And, when you have been convinced and ready to start the campaign, let us know about it.

Why not do this now, **to-day?**

Using Show Windows in the Spring Campaign

The Show Window is an Effective Sales-Creator in Small Town Stores as Well as in the Large Cities—Improvements During Recent Years—Displays by Retail Hardwaremen.

THE spring campaigns are now in full swing. The time of the year has arrived when retail hardwaremen put forth their best efforts to make sales. The public is in a buying mood and the merchant has laid in a good stock of merchandise in anticipation of a large volume of spring business. The problem confronting the retailer at this season is that of disposing of the goods he has to sell. Many methods of publicity will be employed by retailers in all sections of the country. The methods will vary in many ways. Advertising methods which prove effective in one community may prove inadequate in another. Methods employed by the city dealer may be of no use to the small town dealer. The methods of the small town dealer, while effective in his community may be of little use in the city.



There is one form of publicity, however, that is generally looked upon, by all merchants whether located in the largest city or the small hamlet, as an effective sale creator and that is the show window.

For a number of years Hardware and Metal has been advocating that hardwaremen pay more attention to their window displays. There has been an improvement in the quality of displays, in fact there has been a vast improvement during recent years. A prominent Montreal wholesale hardware merchant recently stated that there had been more progress made in hardware window trimming during recent years than in almost any other line of business. He is, no doubt, correct in his assertion, for the window displays of the retail hardwaremen are now on a high plane and are constantly improving. Many of the most modern store fronts are found in hardware stores. There are, of course, a few merchants who have not yet taken full advantage of the opportunities for sales, afforded through the medium of the show window. These merchants are in the minority and the number is rapidly growing smaller.

In the present spring campaign the show windows should perform an important mission in placing before the public the many lines of spring goods which the retail hardware merchants have to offer. There are so many lines to be shown. The merchant could change his window displays every week during this season of the year without repeating displays of similar kinds of goods. Just think of the splendid displays that can be made with such lines as paint, garden tools, building materials, fencing, housecleaning supplies, household mops and dusters, builders' hardware, tools, paperhangers' tools, paint brushes, dairy supplies, garbage cans, roofing and building paper, and hundreds of other lines of goods sold during the spring season. Just think of the many sales you can make during the spring by simply placing your wares before the eyes of the public. Do not forget to use show cards and price cards, they are the lubricant of a store and they cause the goods to glide easily away and at the same time put profits in the pockets of the merchant.

An Excellent Tool Display.

One of the accompanying illustrations shows an excellent display of tools arranged by Fred Mills for the Mills Hardware Co., Hamilton. This display will create sales during all seasons of the year, and is always seasonable. Great

Excellent Display of Tools and Builders' Hardw are by Fred J. Mills, with Mills Hardware Co., Hamilton, Ont.

care has been taken in arranging the tools, and a neat price ticket on each article adds greatly to the value of the display. The background has been carefully arranged, the incandescent lights shown are used for lighting-up the display at night.

The end background is used for featuring builders' hardware, door bells, letter box plates, escutcheons, etc., being shown. A number of mounted lock sets including store door, front and inside sets are featured. The border of red, white and blue carpenters' chalk is also a novel feature.

The other illustrations shows a sectional view of a store display arranged by Edwin Keyes for the Soo Hardware Co., Ltd., Sault Ste. Marie. In the display was shown a number of stoves of various styles. The novel feature was an automobile constructed principally of stove parts. The wheels were made of stove pipe elbows, with spokes represented by spoons. A warming closet was used to form the seat. Other articles used, and shown in the illustration are bake pans, stove board, oven, cake tin, blanc mange moulds, cross-cut saw, wash boilers, vacuum washer, pot cover, stove shaker, fire shovel, etc.

The figure representing a person driving the auto added greatly to the novelty of the display.

A THOUSAND MILES OF WEALTH.

(Continued from page 55.)

The experiment initiated by Mr. Oliver of bringing reindeer from Labrador into the Mackenzie district has not been attended with success, as it has in Alaska, due to the fact that it has been found to be impossible to herd these animals in the summer time, owing to their habit of stampeding before the pest of flies.

Horses, however, are being employed at Fort Smith, and there is no reason to doubt but that this question of winter transport will be solved, without much difficulty, by improving the breed of transport dog, and by establishing a class of horses inured to the northern country.

In conclusion it may be stated that the far North holds within its limits untold resources of wealth which in due time will help to swell the already vast riches of the Dominion, and that this great area, instead of being regarded as being unproductive, will rank with the older parts of the Dominion in natural resources and produce.

TRADE WITH PORTUGAL.

Hardware and Metal is in receipt of the following letter from the Consul for Portugal:—

March 10, 1914.

I am in receipt of a letter from the Commercial Association of Lisbon, Portugal, which reads as follows:—

"Being desirous of enlarging our commercial business, especially the foreign one, the directors of the association have approved of the installation of a room for catalogues of the most important commercial houses in the world, in order to have our business men acquainted with prices of all articles in the world's market, and for the above reason we ask you to be kind enough to invite by the most practical means the commercial houses of your district that export their products to present their catalogues to the association.

"Any such catalogues should be addressed to the Associacao Commercial de Lisboa, Lisbon, Portugal."

Perhaps you will be good enough to acquaint the readers of your various technical papers with the desire of the Lisbon Commercial Association to receive catalogues, the receipt of which may result in export trade for Canadian manufacturers.

Yours truly,
Consul for Portugal.

MEETING EASTER MONDAY.

A meeting of the Executives of the Ontario Retail Hardware and Stove Dealers' Association and of the Canadian Hardware Manufacturers' Exhibitors' Association will be held at the Queen's Hotel, Toronto, on Easter Monday, April 13.

Benjamin Moore & Co.

Benjamin Moore & Co., Ltd., Toronto, have issued price list "D" for dealers. The list, consisting of 40 pages, is attractively gotten up, and illustrations in colors are shown of many of the firm's products. Copies will be mailed on request.

Auto constructed of stove parts, by Edwin Keep, with Soo Hardware Co., Sault Ste. Marie, Ont.

Current News of the Hardware Trade

Western Canada Notes.

R. E. Moore, of Cudworth, Sask., has been in Winnipeg buying for the spring.

Wright & Jickling, East End, Sask., west of Shaunavon, Sask., are a new concern just opening up.

F. C. Hesketh has started business at Cupar, Sask. Mr. Hesketh for some time has been employed by Meldrum, Ellis, & Shepherd, Cupar.

C. H. Trelford, who has been traveling for McClary's, Ltd., of Yorkton, Sask., for the past two years, is going into business for himself at Toronto.

Harry Pringle, the G. F. Stephens & Co.'s Saskatoon representative, is spending a vacation at Toronto and at Cobourg, Ont., where his home is.

N. D. Storey, of Empress, Sask., late of Indian Head, was in Winnipeg last week. Mr. Storey's old friends will be glad to hear that he is doing well in Empress.

C. E. Morris, Southern Alberta representative of Wood, Vallance, Ltd., Winnipeg, was married on March 19 to Miss Bessie Maguire, of Calgary, Alta. His headquarters are at Lethbridge.

Norman McGrattan, who until recently had a hardware store at Kandahar, Sask., has joined the traveling staff of the Miller-Morse Hardware Co., Winnipeg, and will represent them in Southeastern Saskatchewan.

Among new hardware firms in the West is A. W. Shaw & Co., Riverside, Sask. Mr. Shaw was formerly manager of the Rogers Lumber Co., Morse, Sask., where he won a gold watch last year for the best line yard.

Another new firm is Scott & Saunderson, Dormeny, Sask. Mr. Saunderson is a young man who for a number of years has been head clerk for A. Kennemann, Kindersley, Sask. He is an experienced hardwareman in every way, and was formerly with A. S. Worthen, Zealandia, Sask.

W. A. Wood, president of the Wood, Vallance, Ltd., Hamilton, has been visiting all the branch houses in the West, including Winnipeg, Calgary, Nelson and Vancouver. He was in Winnipeg on Monday on his way back. On the trip out West he was accompanied by David Wood, secretary of Wood, Vallance, Ltd., Winnipeg.

Fire Losses.

Halifax, N.S.—Fire did damage to the office of the Sherwin-Williams Co., of Canada, Ltd., 133 Upper Water Street.

New Firms.

Zelma, Sask.—F. D. Kettles has opened a hardware store.

Cadillac, Sask. — The McGillvary Hardware Co. has started business.

Drumkeller, Alta.—The Lougheed Hardware Co. has commenced business.

Melfort, Sask.—S. Smart will open a new hardware store in the Smart block.

East End, Sask. — McPherson & Youngher have started a hardware business.

Humboldt, Sask.—The Geo. P. Kenney Hardware Co. will open a store here shortly.

Humboldt, Sask.—It is reported that the Pioneer Plumbing and Heating Co. will open a store here shortly.

St. Thomas, Ont.—The St. Thomas Electric Mfg. Co., makers of instantaneous electrical water heaters and electrical appliances have commenced operations.

Personal Notes.

F. W. Moore has been appointed manager of the Garlock Packing Co., Montreal branch.

L. Privat, hardware merchant, Williamsford, Ont., was a business visitor in Toronto last week.

W. C. Anthony, hardware merchant, Georgetown, Ont., was a business visitor in Toronto last week.

F. M. Osborne, of Samuel Osborne & Co., Ltd., Clyde Steel Works, Sheffield, Eng., has just completed a trip through Eastern Canada.

J. M. Gunn, purchasing agent, McClary Manufacturing Co., London, Ont., is at present on an eight weeks' trip to England and Germany.

J. B. Gilmour, of the Winnipeg staff of McClary Manufacturing Co., has returned to London, where he will be associated with the home office.

H. D. Johnson, late with the Canadian British Insulated Cable Co., has joined the staff of the Eugene F. Phillips Electrical Works, Ltd., Montreal, as assistant contracting manager.

Business Changes.

Woodstock, Ont.—J. F. Smiley has sold his Ayr business to Roy Lashbrook.

Ontario Incorporations.

The Brantford Computing Scale Co. capitalized at $150,000, head office, Brantford, Ont., to manufacture and deal in scales, hardware, brass, iron, steel and wood specialties, etc. Incorporators: A. L. McPherson, J. L. Howard, F. H. Gott, H. B. Hawkins, F. E. Hicks.

Dominion Lock Co., Ltd., capitalized at $100,000, head office, Toronto, to manufacture and deal in locks, keys and receptacles and structures to which the same may be applied. Incorporators: A. C. Collins, J. J. Williams, J. King, C. R. Morrison, W. M. Gale, E. A. Christolph.

Industrial Notes.

Kerrobert, Sask.—The Grand View Iron Works of Vancouver, is contemplating erecting a plant here.

Kingsville, Ont.—The Dominion Stove Co. will erect a new factory. J. C. Pennington, architect, Windsor, Ont., is preparing plans.

Kenora, Ont.—The Vapo Stove Co. has commenced the manufacture of Vapo oil-gas burners for use in ordinary kitchen stoves. R. J. Cox is the inventor.

Miller-Morse Convention.

The spring convention of the Miller-Morse Hardware Co., Winnipeg, begins on Monday, April 6, in the head office. Opening addresses will be delivered by L. A. Blackwood, general manager, followed by J. J. Corbett, credit manager; J. M. Lynch, buyer, and L. C. Marr, sales manager. Following that, the company, which will include 35 to 40 members of the sales staff, will adjourn to the front steps, where a photograph will be taken. The general meeting will commence in the afternoon, followed by a theatre party at night. Tuesday will be devoted to business, and on Wednesday night there will be a banquet in one of the city hotels.

British Columbia Incorporations.

The Kitsilano Hardware Co., Ltd., capitalized at $15,000, head office, Vancouver, B.C.

Murrin Hardware Co., Ltd., capitalized at $15,000, chief place of business Enderby, B.C.

Orr Bros., steamfitters, sanitary engineers, etc., capitalized at $50,000, head office, Vancouver, B.C.

The Sani-Strainer Co., Ltd., capitalized at $9,000, head office, Vancouver, to manufacture and deal in sinks, sink strainers, etc.

Canadian Distributors Co., Ltd., capitalized at $50,000, head office Vancouver, B.C., to manufacture and deal in a mixture used for plugging punctures in pneumatic tires, etc.

British Columbia Items.

J. D. Williams has opened a hardware and grocery store in Vancouver at 2321 Broadway East.

The Kirrisdale Hardware Company shows progressivenes in the starting of a little house organ, entitled "The Live Wire."

Thomas G. Lee and A. McCullough, have opened a general store at Alexia Creek under the firm name of Lee & McCullough.

Mr. Lloyd, of the logging and lumbering department of McLennan, McFeely & Co., was recently operated on for appendicitis.

It looks as if business was fairly good in New Westminster, as James & McClughan have added another auto delivery to their equipment.

The business owned by G. E. McBride & Company, corner 16th avenue and Main street, Vancouver, has been purchased by T. R. Morrison.

Roy Wheeler and J. Worwick, old employees of the Enderby Trading Company, have been taken into partnership, and the firm is now known as the Enderby Supply Company.

A fine assortment of hardware has been installed by J. L. Ruttan in his new store at Fort Fraser. Mr. Ruttan operates a sawmill in that new town in the northern interior.

The Kitsilano Hardware Company, 4th avenue, Vancouver, are enlarging their premises by taking in the adjoining store. This will give them a frontage of fifty feet, which will be advantageous for display purposes.

One of the most up-to-date hardware stores is that maintained by the Britannia Mining & Smelting Company at Britannia Beach. Their large general store there is the best of its kind in the province.

The business of the Fulton Hardware Company, Enderby, has been taken over by G. H. Murrin, formerly manager of the hardware department for W. R. Megaw, Vernon. A. Fulton, who was president of the purchased concern, is retiring from the hardware business and will devote his time to his already established plumbing and heating business at Salmon Arm.

With artificial ice rinks at Vancouver and New Westminster, hockey is extensively played, and the hardware boys have had teams in the arenas in both cities. Trapp & Co.'s Tigers won the honors in the New Westminster Hardware Hockey League and forthwith challenged the Mc. & Mc. team of Vancouver. The latter journeyed to the Royal City and pulled down a victory, the score being 8 to 2.

Twenty Years Ago
In the Hardware Trade

The following items were taken from the issue of Hardware and Metal of April 7, 1894:—

"A four-wheeled wagon, with motive power, supplied by a benzine engine, has been satisfactorily tested in Germany. It is intended to carry passengers through city streets or country roads, and can be run at the rate of ½ cent a mile. The wagon and engine can be made for $500. The speed is as high as fifteen miles per hour."

Editor's Note.—This was no doubt one of the forerunners of the modern auto. The benzine buggy of twenty years ago was not capable of exceeding the speed limit.

* * *

"The hardware firm of White & Fisher, Tweed, has been dissolved. Chas. J. White and Wilson Gordon have formed a partnership."

By the courtesy of Wm. P. Walter's Sons, dealers in hardware, etc., 1233 Market street, Philadelphia; we are permitted to reproduce a circular dated April 9, 1849, of cut nails manufactured by Reeves Buck & Co., now the Cumberland Nail & Iron Co. It will certainly be of special interest in these days of low prices.

Philadelphia, April 9, 1849.

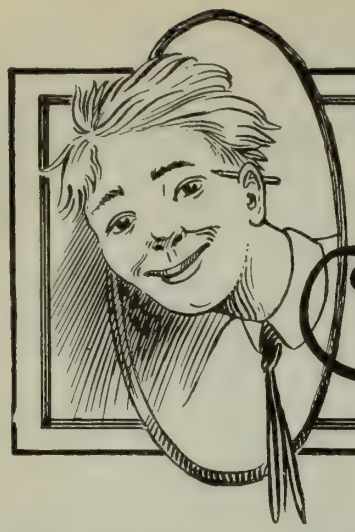
From this date the price of our nails will be as follows:

Edge Grip.

Cumberland extra quality, per lb...4¼c.
Cohansey, per lb.....4c.

Flat Grip.

Bridgeton, per lb.. .....4c.
3d. nails, one cent per lb. additional.
Fine 3d. per lb... .....6¾c.



Six months' credit or 10 per cent. off for cash to the hardware trade. Payable every week on demand.

New Industry for London.

The latest manufacturing company to locate in London is the Eureka Specialty Co., that has been formed for the manufacture of Klenzo-O mops. R. H. Cullis and A. E. Davis are the principals in the new concern.

Miller-Morse Hardware Co., Ltd., Bonspiel. Winning Rink:—Back, H. Kellett, J. J. Corbett; Front, Edmund Wildgoose, W. M. Irwin, skip.

THE JUNIOR CLERK'S PAGE

THE OPINIONS OF A CLERK.

AN observant hardware clerk was discussing trade conditions with a representative of Hardware and Metal the other day, and drew attention to the unwise policy of some dealers in having several prices for goods. He argued that it would be better to have the lowest cash price fixed, and insist on the clerks standing by it. The other system tended to make the public think they were being deceived, and to send their money elsewhere. Enlarging on this, he cited a case of an axe, which with overhead expenses cost in the neighborhood of $1.35, and would be retailed at $1.50. In some stores a clerk, being offered $1.30 for such an axe would accept it, not understanding the meaning of overhead expenses. To avoid this, the article should be figured, and one price asked.

The same clerk told of a certain store where a group of customers might be seen any day waiting for one of the clerks to finish serving a customer, while other clerks were standing around doing nothing. He averred that they were simply waiting for this one clerk because they knew they could make a better bargain with him than with other clerks.

He deprecated the system of giving prizes to clerks, saying that a clerk who was not good enough to do his best without a bait was not fit to be behind the counter. It was a good idea, he said, to give each clerk a certain department, to give one stoves to look after, another carpenters' tools, another washing machines, and yet not to be confined to that one line. With such an arrangement, the proprietor when buying could confer with the man in charge of that department, and know in a minute how it stood.

"MISTER CUSTOMER."

By J. R. Vallillee.

Poor fellow! He foots the bill. The new oil storage plant, the salary raises, the new stove trucks, even the boss's new car for spring—they're all ON HIM. He never kicks about it. His money rolls in to the cash register day in and day out. Perhaps you don't know much about him—many clerks and some proprietors haven't met him yet.

He's an interesting study just the same, and his intimate acquaintance is worth while. He keeps a cow and some hens, and his little yard requires the usual hardware equipment. His sister's going to be married next spring, and he'll be on the warpath for a set of carvers at five dollars or so. His only sister. Yes, he shaves himself, but he's tired of it. His brother's persuaded him to buy a safety razor from A. Wideawake, Hardware Merchant, who often sells them to people he knows. The city is putting down sidewalks along his street, and the old fence has to go. Mrs. Customer has her eye on one. It's made of wire, painted white, with scallops at the top. She's a catalogue fiend, and you know how a book full of pictures and prices appeal to a woman. Of course a personal letter with a drawstring to it from a home firm would get the order. Either the letter itself or the personal touch is lacking, however, or perhaps the draw string is too weak to pull a hundred and forty-pounds of bargain-seeking femininty to the home counter.

Mister and Mrs. Customer are in our midst. Meet them. Next time he drops in at the quiet hour to wait for someone or to toast his shins over the hot air register, don't go back to the desk at once. Put the "Sporting Page" aside till another time. Mister Customer will thaw out gradually. Lead him gently on to discuss town affairs and eventually his own. Tell him about your spring campaign and its benefits to your friends. Include him in that list in a quiet way, and the thing is done.

Keep off that chair behind the back counter if you have to sow it with twelve-ounce carpet tacks, business end up. Armchair hardwaremen are all in the cemetery or the discard. Modern merchandising is hard on sole leather, and easy on—chairs.

MOOSE JAW CONVENTION REPORT

(Continued from page 46.)

however, try to do anything which will militate against the best interest of the customer. I do not believe in arranging prices. I will not cut prices, but I will not arrange them."

Mr. Bole, before sitting down, spoke enthusiastically of the help rendered by the past executive. Especially he wanted to thank Mr. Hutchinson, of Saskatoon. The practical assistance Mr. Hutchinson had rendered was later shown when it was told that he had guaranteed the account of the young and then struggling organization.

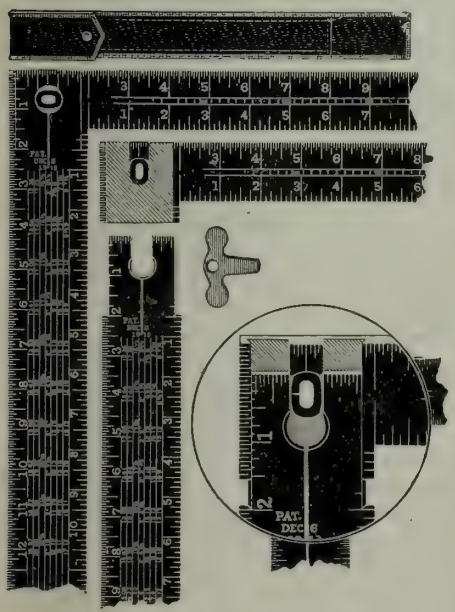
In his report as secretary F. E. Raymond told of the advance made already. There are now in Saskatchewan 70 branches of the association, and 1,500 members.

Equally gratifying was the report of Treasurer Hutchinson, who announced that the organization has come through its first year with a creditable balance of nearly three hundred dollars to its credit.

Little time was occupied with the election of officers, George Maybee, president of the Moose Jaw branch of the association being the unanimous choice of the delegates for the post of president of the provincial organization. W. W. Cooper, of Swift Current, whose attendance this year was prevented through bereavement in the family was chosen first vice-president. J. W. McLean, of Kamsack, was appointed second vice-president, and J. L. S. Hutchinson, Saskatoon, re-elected treasurer.

Saskatoon was decided upon as the place for next year's meeting. Swift Current, too, had invited the convention, but it was felt the gathering should in 1915 be somewhat further north.

New Goods Offered Canadian Hardwaremen



NICHOLLS EXPANSION FIT TAKE DOWN SQUARE.

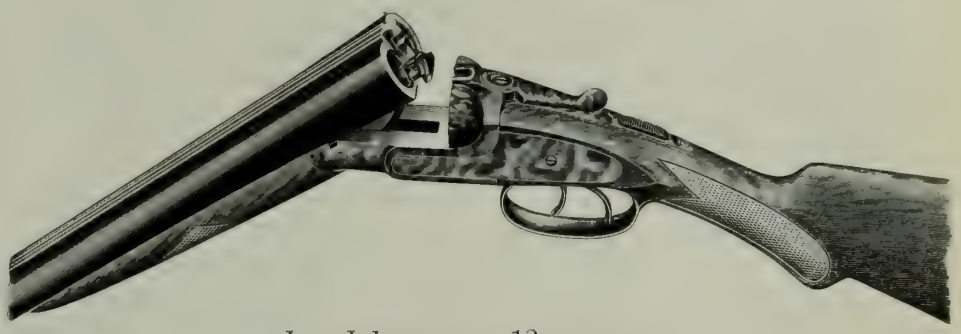
Nicholls Mfg. Co., Ottumwa, Iowa, are offering the trade their new expansion fit take down square. The manufacturers claim that the new squares are so constructed as to assure accuracy, and at the same time take up the wear which comes in taking squares apart and putting them together again. They are constructed with bearings accurately machined, so as to bring the square absolutely true when cam is turned so as to expand the end of body in milled portion of tongue.

These squares are hand fit, thus making a perfect joint, and taking this in connection with the expansion which comes when cam is turned.

It is claimed that it has been tested out, and that the joint could wear one-thirty-second in taking the square apart and putting together, and still the cam would expand the end of body, and take up the wear, and square would still be rigid and solid at joint.

The manufacturer has inserted an oblong hole in cam; this enables the square to be taken apart or put together by using screw-driver, nail, end of file or any blunt instrument usually carried by the carpenter.

Nicholls' Take Down Square.



The cam is constructed with beveled head so as to hold end of body down when square is locked.

The squares are manufactured with the Nicholls' framing rule, giving lengths and cuts of all rafters for sixteen different pitches of roof. This is the No. 500-R. It has the same markings as the No. 100-R. The No. 500-A has the octagon roof framing rule on one side, and the regular roof framing rule on the other.

NEW IVER JOHNSON GUN.

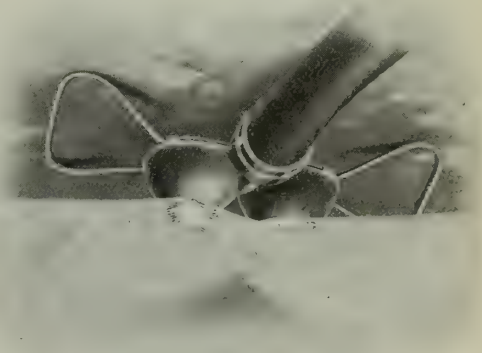
Iver Johnson's Arms and Cycle Works of Fitchburg, Mass., announce to the trade the completion of a new 12-gauge hammerless double-barrel shotgun.

The breech sleeve and lug are one solid drop-forged piece, into which the barrels are tin brazed. This construction is said to preserve the alignment of the barrels, overcoming any tendency to "spread."

Iver Johnson new 12-gauge guns.

The side plates are easily detachable, giving immediate access to the mechanism when it becomes necessary to clean and oil the gun. Among the features is a safety attachment it is claimed automatically assumes a position of safety every time the breech opens. The single-locking bolt is controlled by a top lever, and is claimed to be unusually efficient.

Stock and fore end are of the best American walnut, finely checkered. The gun is claimed to be highly finished throughout.



HOOK FOR MEASURING TAPES.

This hook, when attached to the first end of a steel measuring tape enables one person to take long as well as short measurements readily, while ordinarily two people are required; one at each end of the tape.

This is a new article just put out by the Lufkin Rule Co. of Canada, Ltd. It is a substantial nickel-plated hook with serrated face as per cut, and is designed so that it can be instantly attached to the first end of ¼ in. or ⅜ in. wide steel tapes. The hook grips the end of the article to be measured, and is so constructed that when attached to the first end of any regular tape measuring from the end of the ring, the zero point falls exactly at the inside of the hook so that measurements obtained are accurate. The hook can be as readily detached from as attached to tapes, in no way interfering with the use of the tape in the regular manner.

JEWEL DUPLEX SPRINKLER.

The Jewel-Duplex brass sprinkler here illustrated is being offered to the Canadian trade by Henderson & Richardson, Montreal. The sprinkler is made of brass and is claimed to give a low down, cactus-like spray, 20 feet in diameter. It is said to be economical in the use of water and not affected by wind. The pressure of water causes it to hug the ground.

No. 3—Jewel Duplex Sprinkler.

Obituary.

The death is reported of W. J. S. Stinson, of W. J. Stinson & Son, general store and hardware, Austin, Man.

The death has been announced of Louis Levy, of the Imperial Waste & Metal Co.

Weekly Report on Market Conditions

Statements From Buying Centres on Prices and the Trend of Demand—Full Reports Dealing with Hardware, Metal and Stove Lines.

THE MARKETS AT A GLANCE.

Hardware jobbers are very busy shipping orders booked for April 1 delivery. Paint manufacturers and jobbers are also busy, and optimistic. The metal markets are still quiet, although a feeling of optimism prevails, and there is a slight improvement in the size of orders. Business during March was good and will, no doubt, compare favorably with the corresponding month of last year. Collections are improving, and the business situation appears to be improving. Toronto reports declines in quotations on nails, tin, lead, benzine, gasoline, and cheap inside lock sets. Advances have taken place in Toronto in linseed oil and copper. The "Clean-up and Paint-up" campaign is going to help stimulate Spring business to a great extent.

MONTREAL.

MONTREAL, April 1.—Business during the past week has picked up a bit and there is a very good feeling in all lines. The month of March which has just come to a close has been a profitable one in the trade here. All concerns report that their business for the month of March will show an increase over the same period of one year ago. This speaks well for the trade all through, as there is not the same amount of business going on at present in this city as there was during the corresponding period of last year.

Building will be carried on this year on a fairly large scale, but all contracts will be small. The number of office and warehouse buidings which have been erected during the past two years in Montreal will more than take care of the wants of this city for some time to come. At present there is quite a lot of space available in the towntown districts because this particular branch of the building trade has been overdone. There will, however, be quite a lot of houses erected this season and no doubt these will take care of the usual amount of builders' hardware. It must be said that there has been quite a demand for this hardware during the past week and the amount of business passing at present is showing an increase over previous weeks.

Maple Tools.

The maple industry is practically in full sway at the present time although the weather is not yet what people desire. The demand for all goods used in this industry is at its best just now and this last week has seen some pretty fair shipments going forward.

Driving Tools.

The demand keeps up for driving tools of all descriptions. Cant hooks, coil chain, boot calks, etc., are in great demand and shipments are going forward daily to all sections of the country. The rivers and lakes will soon be ready for the driving and lumbermen seem to be preparing for this now in order to get busy as soon as possible. It is claimed that the amount of lumber cut this year exceeds all previous records. This market ought to be kept busy for some time to come.

Housecleaning Goods.

There has been a terrific movement during the past week in all goods used in housecleaning. The dustless mop is playing quite an important part in this year's business.

Brushes.

Although the demand for brushes has not dropped to any great extent there is not the same amount of business passing this week as last; there is, however, a great volume of business still passing in this line. The market remains quite firm and indications would lead one to believe that an increase would not be greeted with any great surprise by the jobbing trade. The price of rice root is still quite firm and as the supply has been affected by the Mexican situation there is little hope for any immediate relief.

Summer Goods.

There is quite a lot of shipping going on at present in summer goods, such as hose, lawn mowers, lawn tools, refrigerators, ice cream freezers, etc. There is a better feeling all through the country at the present time than was anticipated by the local trade at such an early date.

Enamelware.

This market is still quiet and not much business is passing at present, although there are some shipments being made.

Roofing.

There still is considerable business passing in this market and apparently the dealers throughout the country are expecting a heavy demand from all centres. The business passing at present would lead one to believe that the demand in the country has already started as there is considerable roofing being shipped.

Metal Markets.

In the metal market this week there is very little to report. The amount of business passing at the present time has been such that the market remains quite weak in all lines. There is little or no improvement in the demand and the business passing at present is only considered fair.

Tin.

Locally, quotations are unchanged from one week ago when we quoted 44 to 44½ cents per pound with open prices for quantity lots. Business is quiet and the market is dull.

Spelter.

There is no change in the situation here and last week's quotation of $6.00 to $6.25 still holds. The market is considered to be easy at these figures.

Lead.

The situation here is unchanged from one week ago and the quotation of $5.25 to $5.50 which we gave then is still in effect. The London market has been quite erratic lately and some are of the opinion that it would affect the local market, but as the U.S. markets have been quite steady there has been no change. The feeling here is unchanged from last week. Business passing at present does not show any increase over last week and is limited.

Copper.

Nothing has happened during the week in this market and the quotations given of $16.50 still remain. There is, of

course, always a certain amount of copper passing at all times of the year, but apart from this, there is nothing else doing and business is said to be quiet.

Antimony.

This market is quite the same as last week, when we reported it as being easy with $9.00 still quoted. The amount of business passing at present is no more than seasonable.

Iron.

This market, too, is very quiet, and there is practically nothing doing outside a few small orders regularly. The quotation of $19.00 per 100 pounds still remains in an easy market.

TORONTO.

TORONTO, April 2.—The advent of April 1, has caused considerable activity in the shipping departments of many of the local jobbing houses and in all probability there will be a general rush for the next ten days. Large numbers of booked orders which were dated for Apr. 1. delivery are now being sent out and booking has been very good.

While business is brisk at present and prospects are bright for a large volume of spring trade, it is hard to predict whether or not the briskness will continue throughout the month. In the metal markets a better feeling exists, although the amount of business passing is not large. An improvement in the size of orders is noticeable and no doubt conditions will continue to improve.

Quite a number of price changes have taken place, the majority being declines.

The Metal Market.

The general situation is unchanged, although orders now being received are for larger quantities than for some time past. Lead and tin have declined in price, copper has advanced slightly and other metals remain unchanged. The advent of spring gave rise to a slight feeling of optimism, and although the general situation is not altered much, it is expected that there will be a steady improvement in conditions.

Tin Declines ½c. lb.

The tin market has been showing weakness during the past week and local quotations have declined ½ cent. per pound, making ruling prices range from 41c. to 43c. per lb. The local demand is fair.

Decline in Lead.

Quotations in pig lead are down ¼ cent per pound, and the market is easy at present. Local quotations range from $5.10 to $5.50 according to quantity purchased. Commenting on the lead situation in the American Metal Market says:

The Trust announced another reduction in the price of lead of $2 a ton to the basis of $3.80 delivered New York, with the usual differentials for deliveries at other cities.

Again the reduction is attributed to the decline in the price abroad and the endeavor of the Trust to keep our market low enough to permit exports. But if London is declining because America is selling lead in Europe, and if we are declining because London is declining, the markets would seem to have entered on a sort of endless chain, and there is no telling where the prices will go.

NEW GAME REGULATIONS

Ontario Retail Hardware Merchants will be particularly interested in the notice which has just been given of the following amendments of the Ontario Game and Fisheries Act:

His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

1. Section 14 of The Ontario Game and Fisheries Act is amended by adding thereto the following subsection:—

(4) No person shall take or kill more than one hundred wild ducks in any one year.

2. The Ontario Game and Fisheries Act is amended by adding thereto the following section:—

40a. No person shall sell or offer for sale, or purchase, or enter into any agreement to sell or purchase any wild duck at any time, and no person shall ship or cause to be shipped by any means of transportation any wild duck to be sold either within or without this Province.

The reports from the lead consuming industries are no more unsatisfactory than those received from other metal industries, in fact we are informed that the white lead trade is quite active and more than 40 per cent. of the total consumption is used for white lead purposes. We would be surprised if the consumption of lead shows any greater falling off than copper, spelter or aluminum. The Trust, however, seem to have made up their minds not to accumulate stocks and if they cannot sell their output either here or abroad they will eventually force a substantial curtailment of the output by making the price unprofitable to the ore producers.

Copper Firmer.

The copper market is showing firmness although business is dull. Local quotations have advanced 10 cents per 100 lbs. Pig iron remains unchanged although a much better feeling exists. Spelter remains quiet and unchanged. Following prices are being quoted on other metals, ingot aluminum 99 per cent. pure; wire solder, 25c to 27c per lb.; ingot brass red, 14c to 16c lb; ingot brass yellow, 13c to 15c lb.; electrotypers solder, 30c lb.; wiping solder, 25c to 27c lb.; pattern aluminum, 23c to 24c lb.; brazing metal, 26c lb.

Decline in Nails.

Wire nail quotations have dropped 5 cents per keg, and the ruling price in Toronto is now 2.10 base. Competition is keen at present and price-cutting is still much in evidence. It is reported that within the last few weeks some quotations have been as low as 2.00 base. It is hard to say what will happen in the nail market but developments are expected shortly.

Decline in Lock Sets.

Inside lock sets composed of mortise lock, with metal knobs and escutcheons which have for some time past been selling from $4.35 to $4.50 per dozen sets, are now offered at $3.75 per dozen sets which is considered a very low price. This is the set which retails at 45c and 50 cents.

Stoves, Furnaces, etc.

Conditions in Ontario appear to be fairly good. The demand for gas ranges, plates, etc., is increasing. With the approach of warmer weather the demand for summer stoves, including oil, gasoline and gas stoves, will become more pronounced. Collections are improving at a very satisfactory rate.

Plumbing Goods.

Business in plumbing goods is rather quiet at the present time, and buying appears to be only for immediate needs. Some large contracts are under way, and this helps to stimulate the demand in some localities. Collections are reported fair.

Washing Machines, Wringers, etc.

With the approach of the spring cleaning season there appears to be a slightly better demand for washing machines, wringers, etc.

Wringers are quoted at 20 per cent. off the list prices now in effect. Washing machines are still quoted at 20 per cent. off. Mangles, with three rolls 5 in. x 24 in., hinged table board, stand with caster wheels attached, are quoted at

$14.25 each. Table mangles, with iron frame and two rollers, are quoted at $6.60 each.

WINNIPEG.

WINNIPEG, March 30. — The amount of business being done by wholesale houses here varies considerably. Some houses report twenty-five per cent. less business than last year. Others report this March as good a month as last year. The Miller-Morse Hardware Co. report that March this year is the best March they have ever known. They have a hopeful feeling, and say their collections are fully as good as they were a year ago. Orders, too, are coming in fair. The demand is still heavy for spring hardware lines, especially for wire products, such as poultry netting, barbed wire, nails, etc.

The general feeling is that there will be no boom this year, but that business will just improve gradually. One firm reports collections rather slow, and gives as the reason that many hardware firms in the country are doing their best to adopt cash systems, which is rather hard on them for the time, but will be best in the long run. They were bothered by the recent slack period, and had trouble with their own collections from the farmers last fall.

There is a demand this spring for cheaper lines of ranges. Good or bad times seems to have an effect on the price of goods in demand in these lines. Stove dealers report business fair, and prospects good.

CANADA'S TOTAL TRADE EXCEEDS A BILLION.

Ottawa, April 1.—Although final figures giving the trade of Canada for the fiscal year just ended will not be available for some two or three weeks yet, the indications are, from the returns now in, that the total trade for the twelve months will be in the neighborhood of $1,145,000,000, an increase of about $60,000,000 as compared with the preceding and fiscal year. Imports will show a decrease of something over $30,000,000, while exports will, it is expected, show an increase of nearly $90,000,000. Although the total trade for the year will show a substantial increase, this increase is almost entirely due to the first half of the year, and does not compare favorably with an increase in trade amounting to over $210,000,000 during 1912-1913, as compared with 1911-1912.

Falling-off in Latter Part.

During the last few months of the present fiscal year there has been a very marked falling-off both in imports and exports. Figures for February showed a decrease of $14,401,754, or over 25 per cent., in imports, as compared with February of last year, while exports decreased $2,304,080, or about 10 per cent. The March figures are not expected to show much improvement, and the total trade for the month will probably be some $15,000,000 behind the trade of the preceding March.

The Customs revenue for the year will show a decrease of approximately $6,000,000, as compared with the preceding fiscal year.

CANADIAN PIG IRON PRODUCTION.

The production of pig iron in Canada in 1913, including ferro-silicon, ferro-titanium, and ferro-phosphorus, amounted to 1,015,118 gross tons, against 912,878 tons in 1912, an increase of 102,240 tons, or nearly 11.2 per cent. The production in 1913 was much the largest in the history of the Dominion. For the first time the output exceeded 1,000,000 tons. Of the total, 986,848 tons were made with coke and 28,270 tons with charcoal, coke and electricity, etc., against 886,506 tons made with coke and 26,372 tons made with charcoal, coke and electricity, etc., in 1912.

Catalogues and Booklets

Fernald Quick Sellers.

Fernald Mfg. Co., North East, Pa., have just issued a very attractive 64-page catalogue featuring their line of Fernald Quick Sellers including anti-rattlers, safety couplings, quick shifts, clip ties, trace holders, whip sockets, pole ends, wagon jacks, folding seats, chairs and other small belongings of a buggy. A line of builders' hardware specialties is also shown. Copies will be mailed to the trade on request.

Stamped and Enameled Ware.

Stamped and Enameled Ware, Ltd., Hespeler, Ont., have issued an illustrated price list featuring the lines of white, Austria blue and crystal enameled ware now being manufactured by the company. The price list is intended to give a general idea of the designs, finishes, etc., of the company's products until a regular catalogue is ready for distribution.

Chemico 1914 Catalogue.

The County Chemical Co., Ltd., Checico Works, Bradford St., Birmingham, have issued their 1914 catalogue of Chemico specialties for cyclists, motorists, and motor cyclists. The catalogue consists of 72 pages and is well illustrated.

Banner Stoves and Furnaces.

The Galt Stove and Furnace Co., Ltd., Galt, Ont., have just issued catalogue and price list No. 5, featuring Banner stoves, ranges and furnaces. The catalogue consists of 72 pages and is gotten up in an exceedingly attractive manner. Many splendid half-tone illustrations of the company's products are shown. Complete descriptions and list prices are also given.

Cleveland Grindstones.

The Cleveland Stone Co., Cleveland, Ohio, have issued catalogue No. 11, featuring their line of Cleveland stones, including grindstones, scythe stones, grindstone fixtures, truing devices, etc. The catalogue is attractively gotten up, many of the half-tone illustrations being in colors. Much valuable information is given regarding the manufacture and use of various kinds of stones. Copies of the new catalogue will be mailed on request.

Trade Insurance

The safest policy for the Retail Merchant to adopt is to insure his trade and a continuation of their patronage by selling them goods with a known reputation for quality.

Full value goods, backed by forceful advertising, means successful selling. It's the cumulative effect of satisfied customers that builds business—cumulative in sales and profits.

The effectiveness of Martin-Senour advertising insures a steady demand for Martin- Senour Paints and Varnishes. The quality service of every product insures satisfaction to every customer, and widens the way for continuous profit for you, compounding year by year.

Have us show you why Martin-Senour Paints and Varnishes will satisfy more people more of the time than any other make. Have us explain our policy of trade insurance and the sales co-operation rendered to each Dealer-agent.

The Seal of Approval

For over half a century dealers who handle the best have been selling Berry Brothers' architectural finishes. With various ends in view—lasting service, greatest beauty, the customer's approval, or the certainty of satisfaction—they choose Berry Brothers' varnishes.

Our records show that Berry Brothers' Varnishes have been used in many of the finest buildings of the country. City "skyscrapers," government and municipal buildings, the most pretentious clubs and residences as well as small buildings and modest homes of all sorts—have been beautified and made more attractive and lasting by the use of Berry Brothers' finishes. Among the best known are these varnishes:

Liquid Granite—a floor varnish whose name suggests its wonderful durability.

Luxeberry White Enamel—For white interior finishing. A white enamel that stays white.

Luxeberry Spar—(It's Waterproof)—for marine uses and for all kinds of outdoor finishing exposed to the weather. Will not turn white, crack nor check.

To specify Berry Brothers' Varnishes is to insure absolute satisfaction to your customers.

Weekly Market Report---Paints

MONTREAL.

MONTREAL, April 1.—The business passing in this market still keeps up to former reports and local manufacturers are all claiming best business in their career. One firm states that they have shown a fair increase over last year each week in the present year. This fact alone only goes to show the amount of business actually passing. The buildings this year will consist of house work locally as there is ample office space for a couple of years to come. No large contracts are under way, and the attention of the local trade is turned to the smaller work.

Collections could be bettered, though they are in a pretty fair shape at the present time. There is a much better feeling in the smaller centres than that which is experienced in the larger cities and the merchants of the former places are right up to the mark, while the latter are behind a little. On the whole, though, there are not many complaints heard.

White Lead.

The market still remains at last week's figures which have been quoted now for some time. There is a firm feeling in existence, too, and no immediate change is looked for. Ton lots are quoted at $8.05, while less than a ton are quoted at $8.25, with open prices for orders of larger quantities.

Linseed Oil.

There has been no change in the local quotations and the market remains quite firm at present figures. The demand is much the same as in former weeks.

1 to 4 barrels	60c per gal.
5 to 9 barrels	59c per gal.
10 to 25 barrels	58c per gal.

Boiled Oil—

1 to 4 barrels	63c per gal.
5 to 9 barrels	62c per gal.
10 to 25 barrels	61c per gal.

With open prices for carload lots.

Prepared Paints.

Immediate shipments are going forward daily while there are quite a number of orders being held for shipment about the middle of this month. All manufacturers are claiming the best year in their history.

Glass and Putty.

The demand for glass at the present time is limited and there is not much movement expected before the first of next month.

Putty remains the same as the quotations given last week.

Bulk, in casks...$2.30 per 100 pounds
Bulk, in drums... 2.50 per 100 pounds
Bladders in barrels 2.80 per 100 pounds
With the usual advance of 70 cents per 100 pounds for pure putty.

Turpentine.

The market is still quite firm and although there has not been any change in quotations, conditions are much stronger. Prices are given as follows:

5 gallons	72½
Half barrels	70½
1 barrel	67½
2-4 barrels	66½
5-10	62½

TORONTO.

TORONTO, April 2.—Business in paint circles continues brisk, and the demand is daily growing more pronounced. Retailers are now pushing the sale of ready mixed paints and many very attractive window displays are in evidence in various parts of Canada.

"Clean Up and Paint Up."

The "Clean Up and Paint Up" campaign is now under way. Commencing with this issue, Hardware and Metal is boosting the "Clean Up, Paint Up" movement. The assistance of daily and weekly newspapers, is being secured and if the retailers co-operate, and they should, there is every reason to expect that there will be a record-breaking sale of ready mixed paints during the next few months. Particulars regarding the campaign are given elsewhere in this issue.

Linseed Oil.

Linseed oil quotations have been advanced 1 cents per gallon in Toronto, and the prices now quoted for the best grades are:—

Raw Linseed Oil—

Single barrels	65c gallon.
3 to 5 barrels	63c gallon.
6 to 9 barrels	61c gallon.

Boiled Linseed Oil—

Single barrels	68c gallon.
3 to 5 barrels	66c gallon.
6 to 9 barrels	64c gallon.

Oil in less than barrel lots, 7 cents per gallon. Cans are charged at: 5 gal. cans, 50 cents each; 10 gal., 75c. each.

Turpentine.

No change has taken place in Current Market Quotations and Toronto dealers are quoting as follows:

Single barrels	69c Imp. Gal.
2 to 4 barrels	68c Imp. Gal.
5 gallon lots	76c Imp. Gal.

White Lead.

White lead quotations remain unchanged, although pig lead appears easier. Toronto quotations are:

Less than ton lots ...$8.40 per 100 lbs.
Ton lots ..... 8.20 per 100 lbs.
5 ton lots ..... 7.90 per 100 lbs.

Decline in Benzine and Gasoline.

Gasoline has declined ½ cent per gallon, and is now quoted at 22c. gallon in single barrels; benzine has also declined ½ cent. per pound and is now quoted 21½ cents per gallon in single barrels.

Paris Green.

Quotations in paris green are shown in Current Market Quotations.

Prepared Paints.

Repeat orders are beginning to come in and prospects are that there will be a large volume of spring trade in this line.

MADE TOO MUCH WORK.

"Why don't you advertise?" asked the editor of the home paper. "Don't you believe in advertising?"

"I'm agin advertising," replied the proprietor of the Hayville Racket store.

"But why are you against it?" asked the editor.

"It keeps a feller too durn busy," replied the proprietor. "I advertised in a newspaper one time about ten years ago and I never even got time to go fishing."

WAGES IN THE CUTLERY TRADES.

The penknife grinders and cutlers in Sheffield recently demanded from their employers the abolition of the custom which largely prevails in the trade of paying for work on the basis of fourteen knives to the dozen. Snch a change would represent an advance of 15 per cent. on the men's remuneration, and the demand was refused on that ground, and also because it would prove inconvenient and expensive in other ways. The men then amended their request to an all-round advance of 10 per cent., but this met with a similar fate. In view of the absence of uniform rates of remuneration paid at different works, the employers decline to consider the question of an all-round increase. Some of them are already paying from 5 to 10 per cent. more than their competitors. They admit that as regards a number of items on the grinders' and cutlers' lists the remuneration is inadequate, and they are prepared to consider the items individually and remedy any which do not yield the operative a fair wage. Negotiations are still proceeding.—Ironmonger.

ANCHOR PURE RED LEAD

GROUND IN PURE LINSEED OIL

Will not harden in the package. Remains in suspension when prepared for use. Put up in paste form also mixed ready for use.

REPORT OF

MILTON HERSEY CO., LIMITED

Chemists, Engineers and Inspectors, 171 St. James Street, Montreal, March 12th, 1914

Certificate No. 28832. RED LEAD PAINT marked "Anchor Pure Red Lead. Ground in pure linseed oil. Made by our special process. Will not harden in the package. Ready mixed for use."

Brandram-Henderson, Limited,
Montreal.

Gentlemen,

We have made a careful investigation of the sample of Red Lead received with your letter of February 5th, and submit the following:—

The paint was of consistency ready for use and was of **excellent appearance, smooth and free from lumps or grit.**

When brushed out upon a panel of sand-blasted steel the coating appeared uniform and even, and dried ready for second coating, at ordinary temperature, overnight.

In order to determine the comparison which existed between this sample and ordinary freshly mixed red lead paint, we prepared a batch from red lead of good quality, using the same percentage of linseed oil which was present in your sample. The batch so prepared **appeared very thin,** and when spread upon sand-blasted steel it **did not hide the surface satisfactorily; the pigment separated from the oil, whereas your sample had excellent covering properties and showed no tendency to "sag."**

We next prepared a batch of red lead paint as nearly as possible of the same consistency as your material. To get this required about 8 per cent. of dry red lead in the mixture, and on painting a sand-blasted steel panel with each lot, we found that **more than twice as much of the freshly prepared paint was required to cover a given surface as was used with your material.**

To give an indication as to the relative condition of the coatings containing the same percentage of oil, we prepared a photomicrograph of each at fifty diameters, and these are here reproduced.

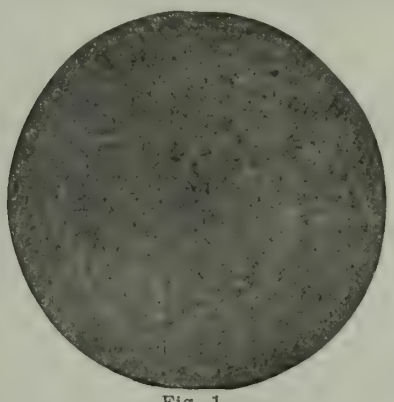

Fig. 1.

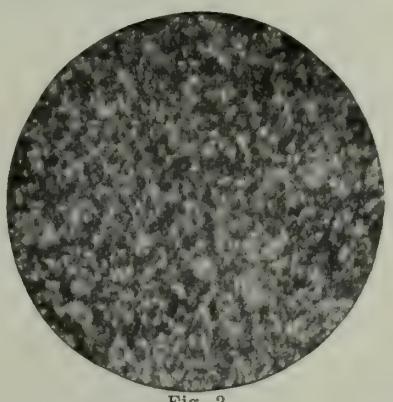

Fig. 2.

Fig. 1 represents your material, and is **exceedingly fine with very small oil spaces between the particles of pigment.** Fig. 2 represents the condition of the freshly mixed red lead paint with the same percentage of oil and similarly applied. The paint is **not so smooth and uniform,** and it will be seen that **relatively large oil spaces are present, as shown by the white areas upon the photomicrograph.** This means that the latter coating would be **less resistant to weathering than your material** since it would be **much more readily penetrated by moisture** than the film of your paint in the same proportions, and **an immersion test in water proved this to be the case.**

A practical painting test was made upon a sand-blasted locomotive tank, under Mr. Job's supervision,—painting one-half of the tank with your sample and the other half with freshly prepared red lead paint of about the same consistency. The temperature at the time of the application was very low, but **your sample showed no tendency to sag, while in order to avoid this condition in the ordinary red lead paint under the same conditions it was necessary to add japan drier to the mixture. Your material spread much smoother than the other, and considerably less of your paint was required to cover a given surface.**

A settling test was made by letting your paint and freshly prepared red lead paint with the same proportion of oil stand side by side **without stirring for three weeks.** In that time **no noticeable settling had occurred in your paint** and there was no feeling of hardness of the paint at the bottom of the can. The ordinary **red lead sample had settled very considerably** and also had stiffened **and was hard at the bottom of the can,** as is usual under such conditions with ordinary red lead paint. This test means that **your paint is practically unaffected by standing,** and does not require constant stirring in order to keep in good condition for spreading.

from the above investigation of your paint, we would expect excellent results in service.

Yours very truly
MILTON HERSEY CO., LTD.
(Signed) Robert Job, Vice-President.

Why not be in line this spring with the brand of paints that makes every paint customer enthusiastic about results?

JAMIESON'S PURE PREPARED PAINTS

are this kind and are made to bring repeat orders—the only kind that puts real profits in the dealer's pocket. Once a can is sold, the subsequent orders come unsolicited.

We want you to be our agent.

R. C. JAMIESON & CO., Limited

ESTABLISHED 1858

MONTREAL and VANCOUVER

Owning and Operating P. D. Dods & Co., Limited

You Can Look Your Customers Square in the Eye

You need have no "soreheads"—no grouches to smooth over—no complaints—if you sell Lowe Bros.' High Standard Paint. The skill born of 50 years' experience of high-grade paint-making guarantees that "High Standard Paints" give absolute satisfaction to users—no matter how paint-wise they are.

You Can Look Your Clerks Square in the Eye

They can know with you the satisfaction that comes from pushing High Standard paints—honest paints worth their price—no "come-backs" on the clerks from personal customers either. It's a square, honest, above-board deal all along the line.

You Can Look Your Bank Account Square in the Eye

and not see it shrink every time you approach—if you handle High Standard Paints. There are advertising reasons you ought to know about.

To-day is the day to write us.

MURESCO

"For Twenty Years the Leading Wall Finish"

ACCEPTS CHALLENGE .:. .:. .:. $100.00 FORFEIT

We understand that certain Kalsomine manufacturers are making the statement that their Kalsomine will cover more surface, pound for pound, and cover it better than MURESCO. If by buying a quantity of their goods and MURESCO on the open market and having two master painters—who may be selected by both parties—test them out, they can prove above statement, we will pay $100.00 to Sick Children's Hospital.

The Great Paint Up, Clean Up, Campaign

Organization, determination to put it over, and harmony amongst Retailers will make this a success.

Let each man play his part. Let each man get his business on his own merit, and to do this he must take advantage of every possible opportunity offered.

Your windows are an almost priceless asset. These should be changed often. Your advertising matter sent you by your various Wholesalers and Manufacturers should be used to the best advantage.

Your newspaper advertising should be as attractive as possible. Let us help you make it so. A card will bring full information.

G. F. STEPHENS & CO., LIMITED

Paint and Varnish Makers

WINNIPEG Branch at Calgary

John Wanamaker says that advertising doesn't jerk — it PULLS. He ought to know, and yet some men think that advertising should go against all rules and precedents and jerk them to success with one tremendous yank.

Friedr. Baurmann & Sons, Solingen, Germany

Manufacturers of High-Grade Razors and Safety Razors

"DWARF" Brand RAZORS

Will bring you satisfied customers. Made of the best English Crucible Steel—guaranteed hand-forged and hand-ground—very carefully tempered by special secret process, ensuring highest results.

CORRECT FORMULAS

More than 5,000 active formulas are used in producing the Sherwin-Williams line of paint and varnish products.

It has taken us years to perfect the exact proportions—part of this knowledge is theoretical, part of it is traditional, and part the result of experience. The combination of all three has been our working basis for developing formulas that are *right.*

As a result The Sherwin-Williams Co. to-day make the highest quality paints and varnishes that it is possible to produce. The dealer who sells this line of quality products not only satisfies his customers and gains their absolute confidence, but also is rewarded by a steady increase in sales and repeat orders.

SHERWIN-WILLIAMS PAINTS & VARNISHES

A FINISH FOR EVERY PURPOSE

THE SHERWIN-WILLIAMS Co. of Canada, Limited: Montreal, Toronto, Winnipeg, Calgary, Vancouver, Halifax, N.S., London, Eng.

The Quality Line

A Profitable Specialty

Lin-Una Dyed Burlaps are non-fading. They have a superior and attractive appearance, and provide a most durable wall covering. Any aggressive dealer will find them to be a good money-maker.

A postal inquiry will bring you full information and sample book.

THE **Winnipeg Paint & Glass Co., Limited**

WINNIPEG **"Everything for a Building"** **CANADA**

THERE'S MONEY IN THE RIGHT PAINT

If you stock a complete line of **Ramsay's Paints and Varnishes** there's no danger of a customer going to "the other store" because you couldn't fill the bill.

Furthermore, that customer will be **satisfied.** Time and climate won't alter his first good impression of the paint you sold him because Ramsay's Paints have stood the test since 1842, and have built up a reputation for right-down durability and unfading qualities in spite of our strenuous weather conditions.

Ramsay's paints sell themselves—stock them, there's money in it for you.

More Customers Will Enter Your Store

If your window is inviting.
Now we can't give you the display inside the window, but we can give you the store front display outside.
In our EASY-SET Store Front System, we believe we have perfected the most inviting and attractive kind of store front being manufactured to-day.
We build these EASY-SET Store Fronts in brass, burnished copper and combinations of brass and copper, with leaded and plate-glass.
The price of the front is low and will return interest upon the investment immediately.
Write for full particulars now. We'll send and give you an estimate without any obligation whatever upon your part.

Public Appreciation of

MAPLE LEAF
Paints and Varnishes

is building up trade for Maple Leaf Agents faster than perhaps any other one thing.

The foundation of their success will be found simply in the fact that

MAPLE LEAF LINES MAKE GOOD BECAUSE THEY'RE MADE GOOD

You will be wise to get in on this M. L. Proposition early and let it show you what public appreciation of your foresight will do to make your paint sales quicker, more frequent and of greater volume.

Merit has been the leading factor in developing this appreciation of M. L. lines and when merit exercises influence it is in the direction of satisfaction which does more than all else to bring customers back to your store.

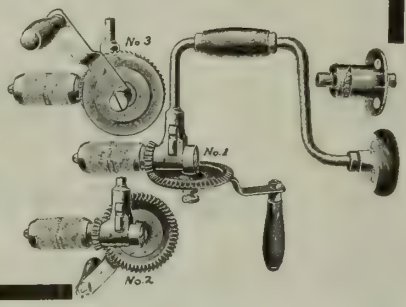
M L — FINISHES THAT ENDURE — QUALITY

Supposing you let mere curiosity prompt you to write us and ask us for proof of the merits of the MAPLE LEAF lines for you as a dealer. We can furnish testimonies that will be worth while to turn curiosity into earnest investigation providing you seek better paint business.

For Service Everywhere And Every Day Our

Drill Brace

192
EXCELS.



Has cut gears and ball bearings that reduce friction to the minimum.

Drilling attachment swivels into three positions. It can be put on or taken off in a moment.

Can be used as a breast drill by simply throwing the dogs out of mesh.

Altogether, an ideal Brace for all-around work—one that *never fails* to give complete satisfaction.

Send for details and complete Catalog.

Millers Falls Co.
28 Warren Street
New York

Strong—as its name implies.

Firm as a rock, rigid as steel, a giant in its own capacity—even as was the ancient Greek — the **Hercules Step Ladder** must appeal particularly to you, whose patrons know quality, and want the best.

For home, factory or office, for any and every use, its trussed construction and husky metal fittings make it absolutely **safe.**

Its fine appearance makes it almost sell itself; its sterling quality and long service-giving capacity make it stay "sold" for all of its life. And the profit you get from its sale is by no means the least important of its good points.

Let us send you prices at once.

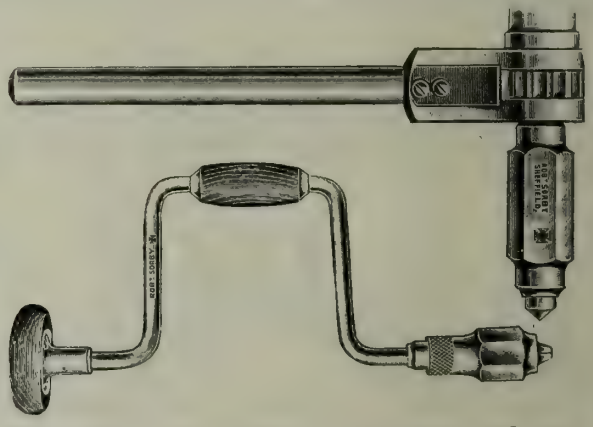
The Stratford Mfg. Co., Limited

Stratford ***Ontario*** ***Canada***

Represented by: British Columbia—Martin, Finlayson & Mather, Ltd., Vancouver. Alberta—Tees & Persse of Alberta. Maritime Provinces—J. H. Hanson Tilley Co., Montreal. Quebec—Jas. S. Parkes, Montreal. Ontario—Roy E. Harris, Stratford.

Practically all the Manual Training Schools in Canada Use Our

High Quality Tools



We make a full line of fine Beveled Edge Tang and Socket Chisels, Pattern Makers' Chisels and Gouges, Turning Tools, etc.

You cannot find a more complete assortment of carving tools on the continent.

Dealers can make a big profit by handling this line. Ask for catalog.

BUCK RBOTHERS

Millbury, **Mass., U.S.A.**

We make several kinds of braces and our Representatives usually have 6 or 8 on show. We make good strong stocks, use well-seasoned timber, fit ball-bearing heads, supply with exposed or concealed ratchets, either bright or N.P. finish. Our goods are guaranteed. Our steel ratchet braces are in stock from 12 to 30-in. They are of excellent workmanship and are attractively finished.

Establish a Profitable Ornamental Fence Department

Handle a line of fencing that is bound to give long continued satisfaction—fencing that not only protects but beautifies property, as well—fencing that can't help bringing more trade to your store. Such is

Peerless Ornamental Fencing

Every stay is made of strong, stiff wire that will not sag. This fencing is made from galvanized wire and in addition, is given a coating of zinc enamel paint, thus forming the best possible insurance against rust. Peerless fence is easy to erect and will hold its shape for years to come. We also build a full line of ornamental gates.

Send for Dealers' Proposition

Get our literature showing many beautiful designs for lawns, parks, cemeteries, etc. Also ask about our farm fencing and gates.

A Novel Feature of the

MAXWELL
"Favorite" Churn

—and one which has made it popular wherever used — is the

BOW LEVER

No other churn has this lever. Handle can be adjusted to centre, left or right, whichever is desired, or is easiest for driving. The frame is of light rigid steel with bolted trunnions, and the barrel of best imported oak with aluminum hoops. Swings on roller bearings and is exceptionally easy-running and durable. A splendid seller.

Send for Illustrated Catalogue of the "easy to push" Maxwell lines.

THE "CANNON OILER"

FORCES THE OIL ANYWHERE

Saves Oil, Time and Labor

A trial always makes a steady user.

Easy Profit because Easily Sold

No matter in what position the can may be held, the oil is entirely controlled by the operator. Not a drop of oil need be wasted. Oil is forced out by simply pressing on the plunger. The flow of oil ceases the instant the pressure on the plunger stops.

Oiling can be done in one-half the time and with less effort.

The "Cannon" is giving satisfaction to thousands of users.

Drop a card for particulars.

SCHRAMBERG WURTEMBERG GERMANY

The Connor Low-Pressure Water Motor Washer

is a "business getter." It operates efficiently on a pressure as low as 20 lbs.—thus overcoming the chief objection to a water-driven washer. Housekeepers need it—and will buy it.

A profitable margin on sales makes this machine "a paying proposition" for you to handle.

J. H. Connor & Son, Limited

Ottawa, Ontario

Housewives Want An Easy-Running, Strong and Serviceable Washer

The "THERMO"

Fills The Bill And Pays A Good Profit

This washer is as easy to operate as a bicycle, the power being applied much the same way. Can be used with either the forward motion or up and down motion, simply by changing the lever. The two lever rachets make this possible.

The Thermo Washer is built to wear and is solid and substantial. The tub is extra heavy and constructed in the best manner.

Legs are cross braced and absolutely rigid. Top is made double to prevent warping. The few working parts are simple and are not liable to get out of order.

Write for complete description. This washer wins trade.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

10 Cent Fly Swatter

This swatter has an extra long handle — 10 inches. It is very neatly and securely bound with soft green felt — cannot mar the finest furniture. Especially adapted for parlor or drawing room use. We have made it extra strong and flexible — will outlast any now on the market.

Our 5 cent swatter is the best ever sold for a nickel. Also it has a triangular fold, permitting the insertion of your ad. if you desire.

Now is the time to place stock orders. We'll gladly quote prices and terms.

Atlas Mfg. Co.
New Haven, Conn.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance):—2c. per word first insertion, 1c. per word subsequent insertion, 5c. additional each insertion when Box Number is required. Each figure counts as one word.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOMESTIC ELECTRICAL WORK, BY WILliam A. Wittbecker. Concise and Practical Explanation for Plumbers and Hardware Dealers, on How to Wire Buildings for Bells, Alarms, Annunciators, and for Gas Lighting From Batteries. The information given is practical, and with a close observance of the directions laid down, any one, though entirely ignorant of electricity, should be able to do the work described. Illustrated with 22 diagrams. Price, in paper, 25c post paid. Price, in cloth, 50c. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business, Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10 postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

Folded, 14¼ x 2 x 2 inches.

NO LOOPS OVER TOP

allowing the saw to be jointed and filed without changing the position of the vise.
With this vise a saw can be filed and jointed the full length WITHOUT SHIFTING, as it is 28 inches long. It folds up in a space of 14¼ x 2 x 2 inches, and takes up no more room in the tool chest than a hammer. Being made of steel it is very light for its size, weighing only 4 pounds. We manufacture the BUCKEYE PLANE; also the old style Saw Vises, Chain Drills, Hollow Augers, Spoke Pointers, Bench Vises, Emery Wheel Dressers, Plane Gauges, Cabinet Scrapers, Etc.

G. B. BIRCH

The Cheapside Brass Foundry

BIRMINGHAM, ENGLAND.

No Getting Away From It!

The Kling Hame Fastener holds customers as well as horses. Anyone can attach it in a minute. Keeps the collar uniformly tight at all times. No matter how he lunges, the horse can't open it or break it. We refund the money for any that may be returned to our dealers. Costs you $2.25 a dozen from any jobber.

Look for "Kling" on the lever. Circular on request.

The National Safety Snap Co., Inc., Dept. 33, Wilmington, O., U.S.A.

Sole manufacturers of the Klingsnap and Kling Hame Fastener.

Precision

is STANDARDISED in

the Rabone

Steel Rule

Our fine Engine Divided Steel Rules have never been equalled for Precision and quick reading.

130 Years of making Rules and Tapes have taught us what the Engineer, the Draughtsman and the Scientist need. By improved methods of engine dividing we produce every type of Steel Rule marked with perfect accuracy. Every Steel Rule bearing the time honoured name of

John Rabone & Sons,

is fully guaranteed to be exact and to give the utmost service. By our exclusive system of marking, 64ths and 100ths can be read off with ease and rapidity.

Dealers can obtain samples and prices from all wholesale hardware jobbers.

CHICAGO STEEL BENDING BRAKES

(Made in 200 sizes)

If you are in the market for a Bending Brake apply to us for catalogue and price list.
There is no use trying to get along with antiquated tools.
To be successful you must be up-to-date.
The Steel Brakes do the largest variety of work with accurate results.

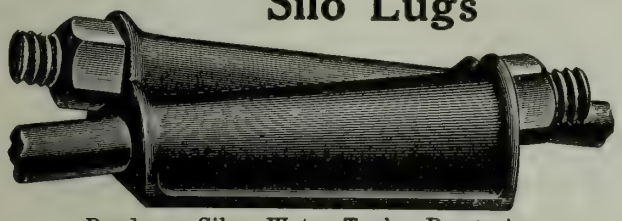
The Steel Bending Brake Works Ltd., Chatham, Ont.

FOR RE-ORDERS

"Bronzite" is a Green Paint that has a distinctive tone—a tone all of its own. It isn't just mixed or made—it's built from a permanent base, its color made fast by lasting ingredients.

BRONZITE

When painting is done with "Bronzite," the color is "grafted in"—it clings to the surface almost like powder marks burned in the skin or the tattooing on a sailor's arm. The "Bronzite" Service invariably results in re-orders.

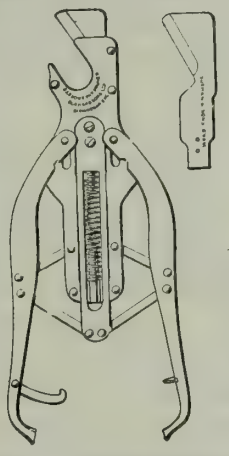


Write for particulars.

Used on all work where a green paint is needed.

COLONIAL WORKS Inc.

225-237 Norman Avenue, BROOKLYN, N. Y.



Silo Lugs

Bands on Silos, Water Tanks, Penstocks, Kilns, etc. For round rods ⅜ to 1½—flat bands 2 to 6 inches. Malleable iron. Prompt shipments.

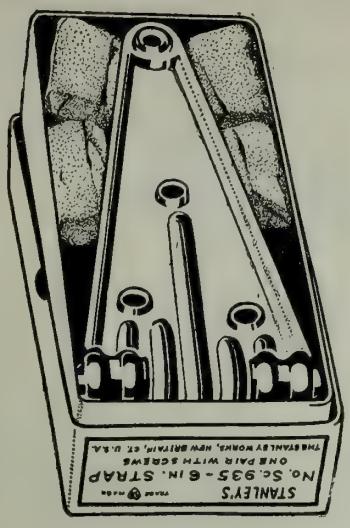
You May Become a Practical Window Dresser for $2.60



This is the first book ever written devoted exclusively to Hardware Window Display, and is a really new and good book. It is a practical, up-to-date collection of ideas of the most expert window dressers in the world. There are hundreds of displays in the book that can be put in at practically no expense — any one of them will bring enough extra trade to the store to pay for the book many times.

STANLEY

CORRUGATED STRAP AND T-HINGES

ONE PAIR IN A BOX WITH SCREWS

Should be on your shelves

STANLEY'S Corrugated Hinges are greatly superior to the old style hinges. Comparing the two lines, Corrugated Hinges have **greater strength,** consequently **longer life; lighter weight** with corresponding **lower freight charges** and a neater appearance. The combination of these qualities of superiority readily explains the **widespread and ever-increasing popularity** of Stanley Corrugated Hinges.

Figure 1

The greater strength with less weight of material is obtained by the application of the old principle of Engineering Design, illustrated in Figure 1. A piece of steel formed as shown by the shaded portion, has very nearly the same strength as a piece of the full area between the dotted lines. It is readily seen how this engineering principle has been used in designing Stanley's Corrugated Hinges.

Ordinary hinges, when they rust, bind on the pin and soon break at the joint.

The Corrugations Around the Joint

of Stanley's Corrugated Hinges absolutely prevent binding on the pin, no matter how rusty the hinges may become. It is in this feature particularly that Stanley's Corrugated Hinges are greatly superior in strength and wearing qualities to any other hinges.

Ask for **Stanley's No. 935 Heavy Strap Hinge**
Stanley's No. 937 Heavy T-Hinge

either loose or packed neatly one pair in a strong telescope box with the necessary screws of just the right size.

FIGURE IT OUT YOURSELF

Amatite ROOFING

THE proposition is so simple that it hardly needs figuring. It is simply this: Most of the ready roofings on the market have a smooth surface which *requires painting every year or two.*

Amatite has a real mineral surface which *needs no painting.*

The cost is about the same.

The smooth-surfaced roofings are sold largely because people do not know that there is a ready roofing on the market which will give just as good, if not better, service *without paint and without attention.*

If you buy a roofing that needs painting you must figure on the expense of paint and the labor. If you neglect to paint it the roof soon falls apart.

Any one who will spend a few moments investigating the proposition cannot help but decide on Amatite. Sample and booklets free on request.

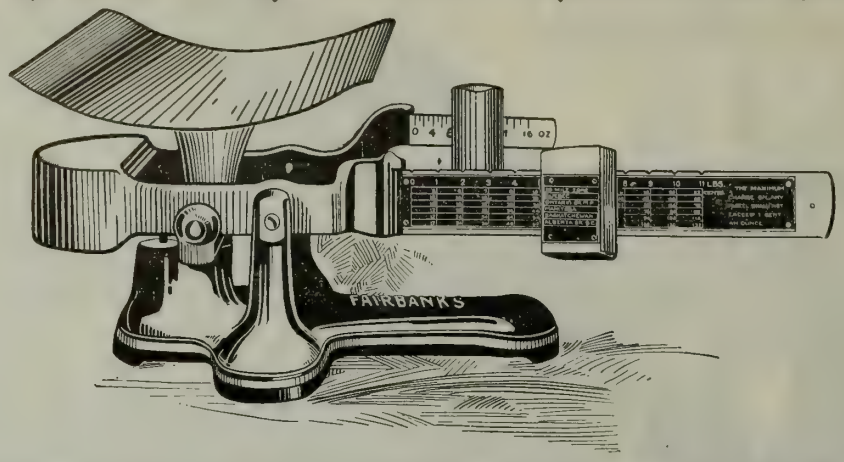
Every Mechanic Should Have a Starrett Speed Indicator



Every mechanic who enters your store is a possible customer for this instrument. For taking speed tests on engines, generators, turbines, motors, line shafting, or any machinery, it is the simplest, most accurate instrument made. It indicates highest speed without heating. Its parts are enclosed like a watch. Made in three styles, it retails for $1.00, $1.50 and $3.00 respectively.

Send for 320-page catalog No. 20M.A., describing the complete Starrett line.

Rust Through Paint

The common fallacy of placing too much dependence on protective coating is proved by the experiments described in the following article published in a recent issue of the "Contract Record":—

From experiments made by Dr. E. Liebreich and Dr. F. Spitzer, as reported in Die Umschau, it appears, says the Times, that the general opinion that rust in iron is prevented by a cover of paint is not always correct, and that in fact the paint itself may be the cause of rust. During the experiments made it was found that polished steel bars, which had been given one coat of paint, and upon which distinguishing numbers were painted, rusted principally, and in some cases solely, in the place where they might have been considered doubly protected—namely, under the thicker layer of paint at the numbers. Five colours were then selected, and some iron plates were given one coat and some four coats of paint, each coat being perfectly dry before the other was applied. These were exposed during 24 hours to a jet of steam. The places with one coat remained intact, the others were completely rusted. It is surmised that this result is due to the fact that the varnish of the second coat dissolved the paint of the lower one and thus made it porous, and that the porosity increased with the number of coats applied.—**Contract Record and Engineering News.**

Moral: Consider the Base Metal.

THE SHEET METAL PRODUCTS CO. OF CANADA LIMITED

WINNIPEG TORONTO MONTREAL

"Health, Kindness and Courtesy"

¶ Everything in this world is largely attitude of mind. No day is beautiful to the man who has indigestion or who has spent the night before at a 'smoker.'

¶ If we radiate good health and good cheer we will get these things back in return. Good humor, courtesy and kindness, pay splendid dividends—and a good long while ago someone said: "As ye sow, so shall ye also reap." This is a fact in Nature, and while we are not indebted to any book or particular individual for this fact, it is, however, a truth which we oftentimes overlook.

¶ A grouch begets a grouch. If a man thinks failure, talks failure, contemplates failure, fears failure, then, verily, failure is on the wing and the spiders are weaving their webs over the door of this man's success. These things constitute what is known as personality, and personality is experience and observation put through a refining process. People with splendid and magnetic personalities have little to say about headaches, indigestion, tonsilitis and appendicitis, because these do not constitute personal magnetism.

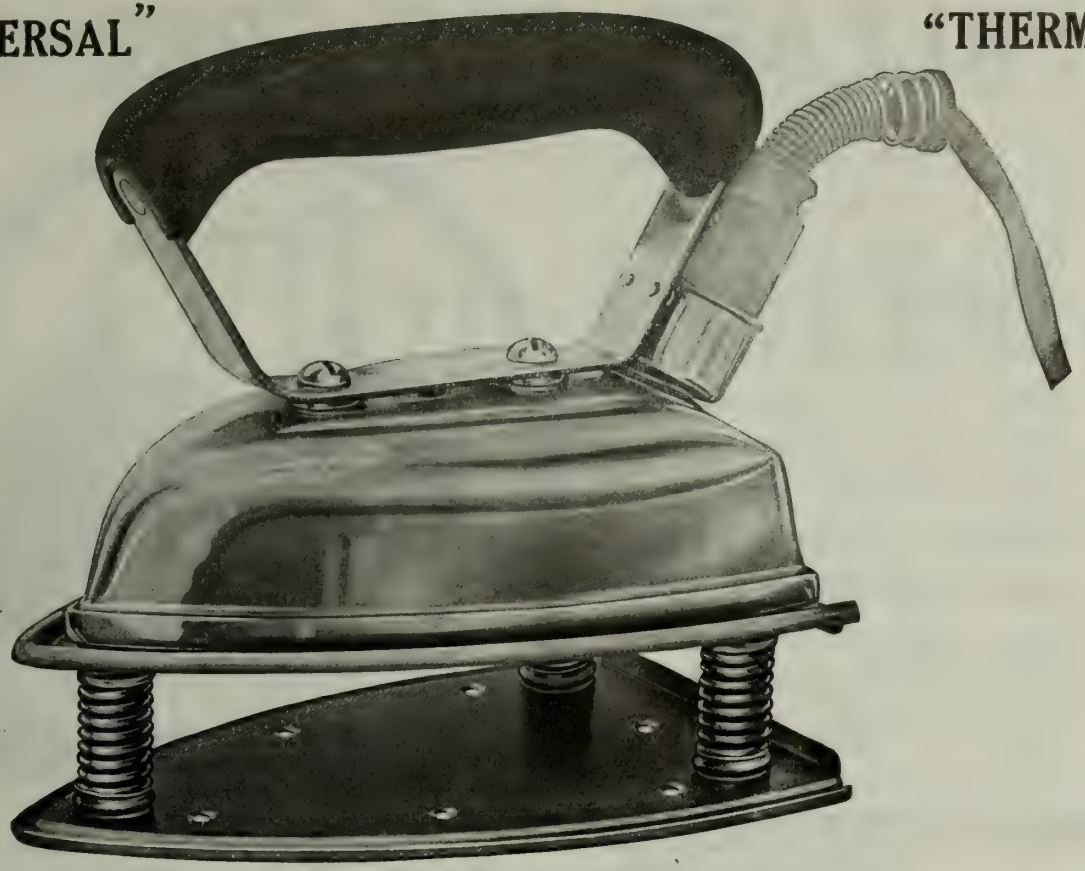
¶ The generally accepted theory among intelligent folks nowadays is that a large per cent. of sickness is the result of a large per cent. of foolishness—and people not being anxious to advertise the fact that they have been foolish, silly or indiscreet, say very little about their aches and ills.

¶ If a man sets out in life to accomplish certain things and is willing to sacrifice enough to accomplish his particular purpose, there is hardly any probability that his ambitions will be defeated—unless he should come in contact with a street car or a benzine buggy—and so it is a fact that **we get back just about what we give.**

¶ If we assume an attitude of grief and despair, and carry our troubles, domestic or otherwise, to the office, tell our co-workers about our sleepless night, tell our troubles and ailments to our friends, discuss the latest death with our customers, rehearse the sickness of the community, then we naturally put a clog in the affairs of the day; in other words, we have cut off the power and our business gets indigestion, and if this is kept up sufficiently long, we are sent to the hospital and our business is turned over to our creditors.

¶ If we become excited and angry over the little affairs of the day, get into heated discussions and arguments on politics and religion, tell those who are attempting to assist us that we are not feeling well, then we are preparing for the 'toboggan slide.' If we are to become a power, if we are to dominate, if we are to really hold the reins, to take possession or to take advantage of conditions, then it is necessary for us to store up power, and power, mind you, is not stored up by discussing trivial affairs, by rehearsing disappointments and attending funerals.

¶ The world has had enough of the grouch. The trouble with business, and practically the only trouble with business to-day, is a lot of old-fashioned, old-fogy, out-worn notions which should have been discarded about fifty years ago—or, better still, which should have been lost on the morning the stars were set in the sky. There are just enough of these people in business to-day who start an occasional panic and create a feeling of uncertainty and uneasiness in the business field which gives the entire machinery of things a setback, from which it requires a year to recover.



¶ The principal things that each individual should cultivate more and more are kindness, the work habit, and, above all things else, **the Health Habit.** And just remember this one thing, nothing is so very bad after all. It all depends on the way we see it. If we are to insist on being miserable ourselves, let us retire to the hills and live in a cave or in the crater of an extinct volcano, or let us go where we will not come in contact with other people, where we will not be a burden to those who desire to be happy, to those who desire to do useful work. No man can conduct an intelligent conversation with 'a toothache.' No man can write clearly, lucidly and entertainingly on any subject after he has overeaten, oversmoked or overdrank.

¶ Once more, remember the Moral—we need to cultivate kindness, courtesy and temperance in all things, even if we believe in 'prohibition in none'; and remember also a good place for courtesy and kindness is in your business and among your business associates, as these assets can be and are used for business purposes.

ALL YOU NEED TO KNOW ABOUT BRASS VALVES

—is—

MORRISON

Morrison Valves make a reputation for the man who sells them—the reputation for giving satisfaction, which they have maintained for over twenty-five years.

You don't even need to know anything about valves to handle the Morrison Line—we take all the responsibility. Just be sure that each valve bears the J.M.T. trade-mark—that's all.

The James Morrison Brass Mfg. Co. Limited

93-97 Adelaide St. W.
TORONTO CANADA

This will be an age of Concrete

Just as other ages have been named after some much used material—the stone age, the copper age, the iron age—for example, so will this, in days to come, be known as the concrete age.

And it will have earned the title, for concrete is being used everywhere, more and more, every day.

Now if you are a

Rogers Portland Cement

dealer you will be right in line for making money out of this big, new business, because you can look after the needs of any small contractors who are doing jobs close to your store—can save them the trouble of hauling cement from the supply house.

And when they know the brand you handle, they'll be glad to give you their orders—for Rogers' Cement meets the approval of their architects and engineers—**Rogers' Cement is standard.**

But you don't need to carry a large stock to meet their varying needs. We'll attend to that as obediently as you tell us to.

You can't find a better proposition from your viewpoint,—**so write now**, to-morrow may be too late.

Judge a Drill by the Holes It Makes—

Get this thought firmly fixed in your mind, "There is a difference in drills."

Users of WILT TWIST DRILLS find that they get more holes of a given size per dollar of cost than they ever got with any other make.

And there is a very logical reason for it.

WILT TWIST DRILLS are made by a new process that insures absolute accuracy and uniformity. The contour of the grooves is scientifically determined—the clearance is clean-cut and well defined—and the hardening is done electrically and with scientific exactness. The machining of WILT TWIST DRILLS is done complete at a single chucking.

Are you prepared to meet the demand in your locality? Send us your order to-day.

ELEY

CARTRIDGES

We Load for the World!

¶ No Ammunition Manufacturer or Loader handles or loads a greater variety of shot gun powders than ourselves, consequently our experience of the styles of powders and the specification of loads which give the greatest satisfaction to sportsmen is second to none.

Eley Smokeless Shot Gun Powder (33 gr. class) is inferior to no other powder. 33 grains is the Eley Standard load, and that this will do the work more satisfactorily than heavier loads of other powders is one of its merits. This load gives results equal to 3¼ drs. of other bulk smokeless powders.

ELEY CARTRIDGES are shot in the snows of Canada, the heat of Central Africa and India, and elsewhere throughout the world.
SOLD BY ALL GUNMAKERS AND AMMUNITION DEALERS.

ELEY BROS., LTD., LONDON.

LUNDY

SHOVELS

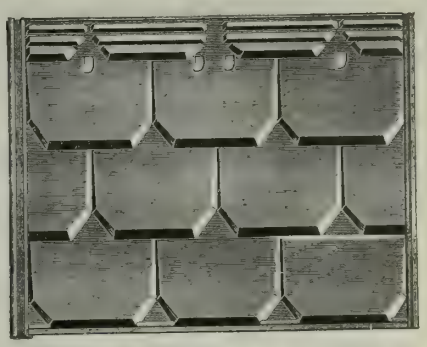
It isn't just by chance,

that Lundy Shovels have become a standard wherever shovels are used in Canada.

No, Sir! There's more back of it than that—it's their many points of superiority that have earned for them their enviable place. For instance—

The strap and blade point are made of crucible steel, and are extra strong, thus ensuring long service and durability, from those parts that usually give out first.

This is only one "Lundy" advantage. To fully appreciate their value as business-getters, you must handle them.



They'll be found at your jobber's, most probably; but if he hasn't got them write to us direct.

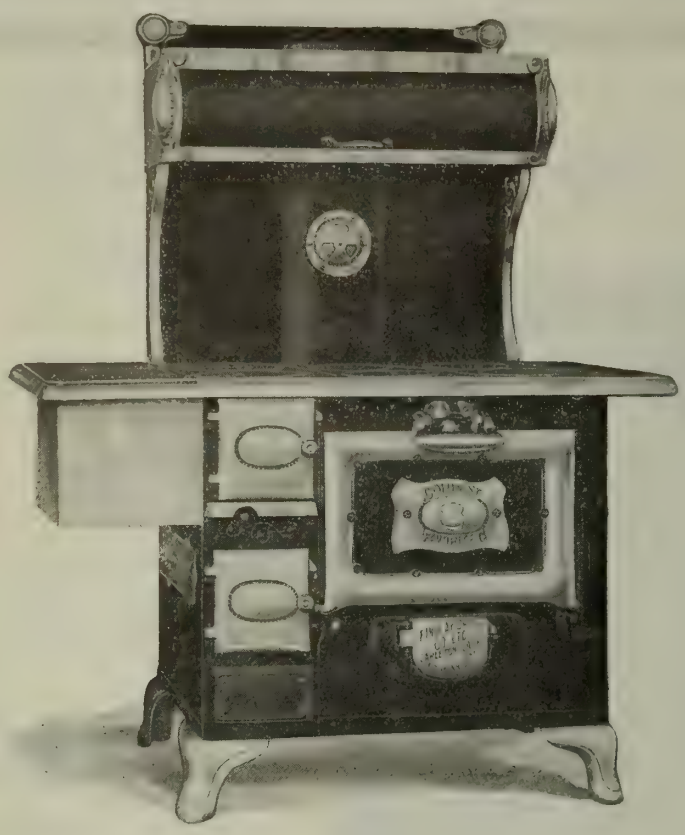
The Builders' Need the Dealers' Opportunity



This is the time of the year when new property is going up and old buildings are being renovated. Architects and Builders will be looking out for the best heating system. Medical men and engineers give the warm air system preference over all others, and all Sunshine Furnace users claim they have the best furnace for heating their homes.

The great new feature of the inclusion of American Ingot Iron (99.84% pure iron) gives Sunshine dealers a selling point of incalculable value. This iron has already made itself famous after years of severe tests. The fact that it is displacing a material of tremendous strength and durability in two vital parts of our Sunshine Furnace, viz., the Dome and Radiator, is sufficient proof, we think, of our faith in this remarkable iron.

The many outstanding features still remain and dealers should get acquainted with the 1914 Sunshine—it holds out a great selling future.

McClary's Ship Quick.

The Colonist Favorite

does not look it, but it is one of the cheapest SIX-HOLE STEEL RANGES on the market. The CLASS and STYLE does not cost anything, but goes a long way towards selling it.

More low-priced ranges will be sold this Spring than ever. The COLONIST is made to meet this demand.

Made in two sizes, 16 and 18-inch ovens, **SIX-HOLE TOPS, DUPLEX GRATES, CONTACT COPPER RESERVOIR.**

The SEMI-PLAIN DESIGN, PLAIN NICKEL, and SMOOTH CASTINGS, give it the appearance of a High-Priced Range. Look up the price if you have our list, if not send for one. The price will surprise you.

The quality will please you.

KIR-BEN

KIR-BEN ASHPIT TALK

A series of Kir-Ben talks will appear weekly — watch for them.

A BETTER ASHPIT BODY

The original design of the Kir-Ben Ashpit is deserving of attention.

Plenty of space is provided under the grates, which with the square corners at the base line in the rear, and the straight sides, make it possible to provide a really useful and satisfactory ashpan,—one that is big and gets all the ashes. This does away with shoveling ashes in the basement and eliminates the dust that comes from an ordinary furnace.

The ordinary ashpit in use in other furnaces and made in several parts is unsatisfactory, as it soon allows dust to escape into the air chamber, and thence up through the pipes to the rooms, making it impossible to keep the house clean.

The Kir-Ben construction prevents this entirely, as the only joint in the ashpit is a cup joint in the extreme bottom, and this is solidly bolted to the main bottom and ring. The Kir-Ben ashpit is very deep,

fourteen inches, and lessens the chance of ashes banking up against the bottom of the grates, thereby stopping the circulation, the cause of many grates burning out.

The incline track shown in the cut is a special feature, making it easy to remove or place the grates in position. To install the grate all that is necessary is to place the rear of the grate on the track, from whence it slides easily into position, and remains locked by means of a swinging bracket, and without the use of any bolts or loose pieces. Removal of grates is even easier.

Patents Pending—Send for catalogue, now ready.

A Confidential Chat With Our Readers

AN AD. THAT BROUGHT CASH ORDERS.

A little over a month ago Hardware and Metal received an advertising order from a Western Ontario manufacturer (name on request) for quarter-page advertisement, to run every other week for a year.

So far, only one insertion has been made, but when the Hardware and Metal representative called on that manufacturer a few days ago, he found a most enthusiastic booster for Canada's only weekly hardware paper.

"I had several good inquiries from that advertisement," he declared; "one man actually sent cash for some of my goods right off the bat. I have never in my experience had such good returns from one small advertisement."

The same manufacturer spoke highly of Hardware and Metal's Annual Spring Number, and said that he had derived some most valuable information from it. He had already ordered a quantity of goods for the equipment of his warehouse from a manufacturer whose full-page advertisement in the Annual Spring Number had appealed to him.

"I keep that number hanging right beside me," said he, pointing to his desk, where Hardware and Metal's big issue was dangling."

Improving With Every Issue.

"Hardware and Metal is certainly improving with every issue. I make a point of reading it each week, and I find it both instructive and entertaining."

This statement was made to Hardware and Metal's Western editor, by one of the leading hardware jobbers in Winnipeg. It reflects what really appears to be the general opinion of the Canadian hardware trade, and it is no small satisfaction to us, that hardware men throughout the Dominion take such keen pride in their weekly hardware paper.

We have often been told by merchants and manufacturers of wide experience in Canada and elsewhere, that no other trade paper in the world covers its field as thoroughly as Hardware and Metal, or possesses so great a prestige in the trade it reaches.

This is all very gratifying to the publishers. It spurs us on to greater efforts, because we are determined that there shall be no halt in the steady progress and improvement shown by Hardware and Metal during the past twenty-five years.

If Hardware and Metal is improving with every issue, as has been said, then we have reached a pretty advanced state of excellence in this our 1,315th issue. But a year from now will see us turning out a still better paper and giving an even more valuable service to our readers.

This is a promise—not a mere idle boast, and the reason we know we can make good on it is that the prestige of Hardware and Metal acquired by 25 years of faithful service assures us of the whole-hearted co-operation of everyone interested in the Canadian hardware trade—manufacturer, wholesaler and retailer. It is just another case of success begetting success.

Big List of New Subscriptions.

We have always found that the issuing of a successful Spring or Fall Number has instantly strengthened Hardware and Metal's position in the trade by adding to our subscription list.

This has been more than usually evident since we have issued our Annual Spring Number for 1914—admittedly the finest single number ever issued by any Canadian periodical.

There are not many retail hardware merchants in any part of Canada who are non-subscribers, but they were all sent copies of the Annual Spring Number, and subscription order blanks. Since Monday of this week, the blanks have been coming back to us, with the signatures of merchants whom we have been very anxious to add to our list of regular subscribers. Up to the time of writing these lines (Thursday morning), 41 new subscriptions had been secured in this way, since the first of the week. And every mail is bringing in more.

Helped to Build a Good Business.

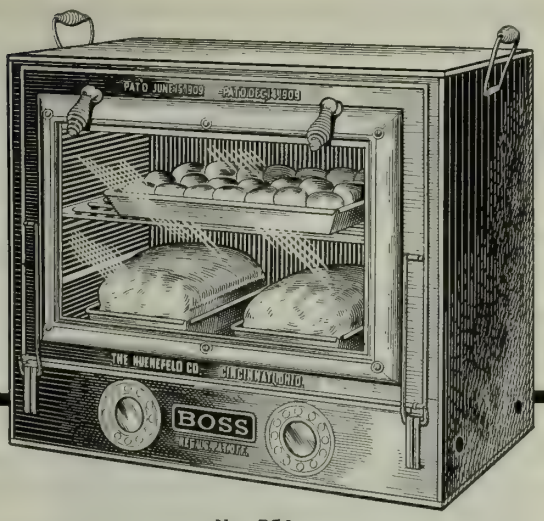
It is the constant aim of Hardware and Metal's editors to furnish the retail hardware trade each week with such information as will assist them in developing every department in their business.

Having themselves been "through the mill," they are able to look at their duties from the standpoint of the hardware retailer, himself. All the suggestions made in our pages are not only feasible, but in most cases have been actually tried out and have made good under existing conditions in some Canadian hardware store.

It is not surprising, therefore, that many of our subscribers frankly attribute to Hardware and Metal a goodly share of the success they have achieved.

An interesting letter along this line was recently received by Hardware and Metal from Wagstaff & Vestrup, Nakusp, B.C. In sending in a renewal of their subscription to Hardware and Metal, they say:

> "Hardware and Metal has materially assisted us in building up a good business from a small beginning. It is one of our best investments."



This firm realizes that to achieve real success in a retail hardware store, they must put more than time and money into their business. They must also invest ideas—ideas in buying, selling, advertising, displaying goods, and, in fact, in every phase of their business.

Now, even the most talented business men cannot keep on indefinitely conceiving ideas of their own, unless their brains are constantly freshened by hearing or reading of ideas which have been successfully adopted by other men in a similar line of business. And it has been by studying the ideas advanced by Hardware and Metal and adapting them to their own special conditions that Wagstaff & Vestrup have built up a successful business.

BOSS OVEN

GLASS DOOR

GUARANTEED

No. 750

BOSS Glass Door OVENS

Sold throughout the World. In almost every Country where Oil, Gasoline or Gas is used as fuel, you will find the Boss Oven on sale.

Its tremendous popularity is due to the fact that it is first of all a good and economical baker. We guarantee it to bake or roast satisfactorily on any good oil, gasoline or gas stove, or "money back" without argument.

The "BOSS" is made better than any other Oven. Only the best materials are used. The body is made of Mecca Lustre Polished Blue Steel. The linings of heavy Corrugated Tin Plate, having thick asbestos inner linings throughout.

Its Patented Glass Door, which we guarantee not to steam up or break from the heat, has been a universal success. More than 600,000 of this style are now in daily use.

Many patented and exclusive features are found in the Boss. The new Hinge and Door Support leave the door opening entirely free when Oven is open. No danger of burning the hands or arms by coming in contact with wires or chains.

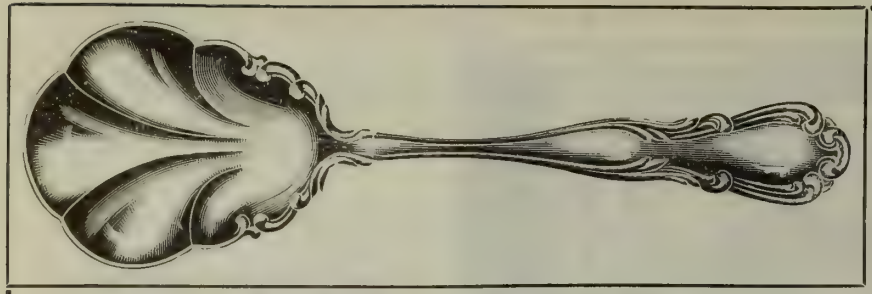
Large variety of styles and sizes in Glass and Steel Doors are shown in our new catalogue, which will be sent on request. Write for it to-day.

Write to-day for Complete Catalog and prices.

NEW BOSS OIL STOVES

Every Vital Feature in the construction of an Oil Stove has been carefully worked out in the "New Boss." There is nothing complicated to get out of order—nothing hard to understand to operate it properly.

Simple but Substantial construction has been adhered to throughout. The extra wide top gives more room for cooking utensils. The legs are strong cast iron, making the stove very rigid.



Patented High Wick Limits or fingers are provided on the inner combustion tubes which are engaged by the wick when turned at full burning height. These fingers automatically trim the wick when chimney is revolved.

The Intense Blue Flame plays right against the cooking utensil, giving quicker results and using less oil than most other stoves.

The Right .22 Calibre Repeating Rifle

¶ You will appreciate that the .22 calibre rifle is the very keystone of your arms and ammunition business.

¶ The boys do their first shooting with a .22 and this type of rifle also usually finds a permanent place in every grown-up shooter's equipment.

¶ You want your customers to get the right .22 calibre repeating rifle—

¶ Then be sure that they know of the many radical improvements found only in the Remington-UMC .22 Calibre Repeating Rifle.

¶ The solid breech keeps the dirt out of the action, and protects the shooter's face and eyes from possible "blow-backs."
¶ The hammerless feature gives an unobstructed view for sighting—no protruding hammer to catch on twigs, fence or clothes.
¶ The take-down is very easily accomplished without aid of any tool; barrel can be cleaned from the breech.

¶ Impress on each customer that the above features are found only in the Remington-UMC .22 cal. Repeater.

Remington Arms-Union Metallic Cartridge Co.

.22 Calibre Metallic Cartridges

¶ It is not every dealer who realizes the full importance of his trade in .22 metallics.

¶ Yet it is safe to assert that the growth of his ammunition and arms business depends to a marked degree on how he handles this light calibre ammunition.

¶ And this stands to reason. Eight gun users out of ten start their shooting experience with a .22 calibre arm.

¶ Their buying habits are yet to be formed. In their choice of make and brand they follow the lead of the seasoned gun users they know.

¶ There is no surer way to get their custom than by inviting them to Sportsmen's Headquarters with an active display of the *Red Ball Mark* of Remington-UMC.

Montreal Organizing "Clean-Up and Paint-Up" Campaign

Movement for a Cleaner Montreal Launched by the Montreal Publicity Association—Prominent Citizens and Civic Officials Named for the Committees—What Other Cities Have Done.

ANIMATED by a desire to make Montreal a cleaner city and a better place to live in, a number of leading citizens of the metropolis are now in the midst of an energetic campaign to organize a "Clean Up and Paint Up" week. The project is along the lines outlined in Hardware and Metal last week and the idea seems to be meeting with the hearty approval and support of civic officials, prominent business and professional men and the newspapers.

The campaign was inaugurated on Tuesday, March 24th, at one of the regular weekly meetings of the Montreal Publicity Association when the honorary president of that body, Frederick Abraham, gave a very comprehensive address outlining the purposes of such a campaign and telling what other cities, mainly in the United States, had done to make living conditions better and their cities brighter and more attractive.

The idea was enthusiastically adopted by the members of the association and a special organizing committee was appointed to arrange for a permanent staff of officers and committees. Out of this beginning has grown a larger organization known as the Montreal Publicity Association City Improvement Campaign. This organization will not only interest itself in a "Clean-up and Paint-up" week this year, but will make it an annual affair and will also devote their energies throughout the year to matters that will tend to improve the appearance, health or general living conditions of the city.

Mr. Abraham, in launching his campaign for a better and cleaner city did not mince words but struck right out at the need of a higher regard for civic pride and the responsibility of citizenship.

"Every one of you," he said, "knows the value and the necessity of education, which converted into plain terms means publicity. I have figured out that possibly 80 per cent. of the people want to do the right thing, the other 20 per cent. may be dishonest, and even some of these want their fellows to be honest. Eighty per cent. of any community is certainly a tempting franchise to a crowd of the right kind of publicity men.

"We propose here and now to start an agitation that will amount to a civic epoch. We mean to-day to clutch at the very roots of disease in this city, and that is an unclean city, an unclean people. Of what avail are hospitals, nurses, and doctors if the very source is contaminated? And gentlemen, the source in this great overgrown city is frightfully contaminated. Montreal is a foul and a dirty city. It is the prolific origin of a shocking mortality rate, especially among children. Can you comprehend that the infant mortality of Montreal is practically double that of any other civilized community on the face of the earth, and with this hideous phantom stalking in our midst what, I ask, is being done to arouse the public conscience to the horror of such a blot on our civilization, and this not in the congested districts of the older land, but here in the new world where nature has given us liberty and advantages with a lavish hand?"

Mr. Abraham went on to point out the good work that was being done by the civic health department, but contended that without the interest of the individual—with an indifferent public conscience, the result of their efforts was largely discounted.

"Dirt begets dirt," he said. "Cleanliness suggests cleanliness. The power of suggestion and example will do more to clean up Montreal than any other influence." Mr. Abraham cited the by-law prohibiting spitting in street cars, which was inaugurated a few years ago and which is now so generally observed that no one with any sense of decency would think of expectorating in a public vehicle and even on the street they do so in a shame-faced and unostentatious manner, and all this was accomplished without invoking the aid of the law, for no one had been summoned before the courts though there has long been a law making it a punishable offense."

A personal experience of the speaker in Rochester, N.Y., was related showing how the police of that city guard against the streets being littered with waste paper and rubbish. Mr. Abraham, while walking along the street threw an empty envelope on the roadway. Almost immediately he felt a hand on his shoulder and was invited by a policeman to pick it up. He expressed his astonishment at such a request, and then it dawned on him why Rochester was called the "Flower City." As he stooped to pick up the offending waste matter the officer kindly offered to do so for him, remarking as he did so that Mr. Abraham was evidently a stranger and innocent of the way things were done in Rochester. "Yes," he replied, "I am a stranger indeed to such civic habits. I'm from Montreal. I wish every policeman in my city had the same interest in the ap-

MAKING PROGRESS.

The "Clean Up and Paint Up" campaign is making progress. The following towns and cities are due to hold campaigns during the first week in May:— Winnipeg, Brandon, Regina, Moose Jaw, Redcliff, Calgary, Saskatoon, Estevan, Oak Lake, Neepawa, and Edmonton. The scheme as outlined is for a special sermon on Sunday relating to the moral effect of cleanliness. Monday is devoted to fire prevention, Tuesday to the front yard, Wednesday to the back yard, Thursday for paint, Friday for flowers, and Saturday for Arbor Day.

pearance of its streets which are literally covered with waste and refuse."

After dealing with some of the particular offences from which Montreal suffers, Mr. Abraham outlined his proposed campaign as follows: "To have a 'Clean-up and Paint-up' week in Montreal, this week to be set apart each year for a general public and private housecleaning, to engender a spirit of enthusiasm in the public mind by advertising extensively the five-word slogan, 'Clean-up and Paint-up.' Everybody, old and young, would be asked to lend a helping hand for a few hours at least to put every street, alley, yard, cellar, passageway, back lot and corner in spick and span trim. Experience in other places indicates that when property owners have once cleaned up their property, they are very apt to keep up the good work by cleaning at regular periods."

Commenting on the commercial side of the campaign, Mr. Abraham contended that it was a distinct advantage as it insured the interest and co-operation of the business men. He stated that he had been promised $300 from business men and much more could be secured for carrying on the work.

"A superficial view of the business side of the movement," he said, "would lead one to think that its beneficial effect is felt only by the hardware, paint, grocery and lumber trades. As a matter of fact, 'Clean-up Week' creates a wholesome activity that helps nearly all kinds of business. It arouses housekeepers and property owners to the importance of cleaning up their places, indoors and out. This leads to making various repairs. Outdoors there are roofs, conductor pipes, walks, fences, trellises, etc., to receive attention, and after the cleaning the need of new linoleum, a carpet, a piece of furniture, or a rug, window curtains, wall paper or draperies, is seen.

"A clean yard suggests shrubs, a flower bed or vegetable garden requires seeds, agricultural implements, etc. Clean houses and surroundings invariably stimulates people to greater care about their personal appearance and result in increased business in clothing, furnishing goods, dry goods, millinery, etc. Newspapers are benefited by the greater business activity resulting from this movement. Tradesmen and artisans of all kinds find steady employment at good wages in cities and towns where the clean-up spirit prevails."

Committee Formed.

A general committee has been formed to supervise the plan of campaign and with the chairmen of other committees will form an executive for carrying out the work. Mr. Abraham has been chosen honorary president, F. A. Covert, president, and J. Sophus, secretary of the Commercial Travelers' Club, hon. secretary. Members of the general committee are: Chief Tremblay, of the Montreal fire department; Dr. J. G. Adami, L. R. Greene, of the Sherwin-Williams Co.; U. H. Dandurand and the officers.

Other committees and their duties are:

The Publicity Committee, to supervise general advertising, such as in news papers, on billboards, street cars, etc., and co-operate with the education committee; city editors of the Montreal newspapers, W. J. Carrique, H. A. Williams, L. deB. Corriveau, E. H. Lawson, P. A. Day, H. E. Stephenson, A. W. Greene and, as chairman, E. Montet.

Educational Committee, to get out special literature and see to its distribution, make arrangements with moving picture theatres to show slides, arrange for holding meetings and supplying speakers: A. B. Ware, chairman; E. M. Emery, Albert Chevalier, J. J. Harpell, Lyon Cohen, J. N. Chevrier, G. M. LeHain and Dr. C. H. Gould.

Co-operative Committee, to arrange for and go before all various business, labor, civic, patriotic and social societies and organizations, to secure their co-operation; to get a delegate appointed from each; to secure the co-operation of all pastors, and have them preach special sermons on civic cleanliness: Dr. W. H. Atherton, chairman; J. A. McMullen, Gustave Renaud and F. Abraham.

Merchants' Committee, to get the merchants interested; to get them to use their advertising space to boost the week, and to allow cards to be displayed in their windows; to make window display for goods needed in "Clean up" work for a week before, and to advertise in the papers these goods: F. A. Scroggie, chairman; Theodore Morgan, W. H. Goodwin, J. O. Gareau, A. J. Dugel, E. W. Sayer, J. Ogilvie, J. A. Beaudry, J. Wilder, J. Hamilton, N. G. Valiquette, R. Fairweather, O. S. Perrault, J. B. Barker, H. Vineberg, Rod. Weir, Alfred Wood, W. H. John and A. Davidson.

To Get the Children.

Children's Committee—To get the interest and co-operation of school teachers, school children, boy scouts, etc., and to superintend "Children's Day": Dr. S. Boucher, chief city health officer, chairman; Dr. Walter Kennedy, E. H. Lawson, Captain Archambault, Lieut.-Colonel F. Minden-Cole, Dr. Perrault, Dr. J. Decarie, Judge Choquet, Judge E. Lafontaine, and J. C. Walsh.

Operating Committee.—To secure the co-operation of the city to have all garbage removed each day of the "Clean Up" week; to select suitable places for the placing of street and part receptacles for rubbish, and to work with the Sanitation Committee: H. H. Kay, chairman; A. M. Wright, F. A. Guinivan, E. Galloway, H. H. Rodger E. Quinn, A. Pillow, L. P. Deslongchamps, A. Gaboury, L. J. Gaboury and Louis Rubenstein.

Emergency Committee.—To look after any work which unexpectedly arises and for which there is no committee: E. T. Savers, chairman; G. E. Fraser, C. Fee, A. A. Tritsch, A. Plow and O. S. Johnston.

The formation of the Finance and Sanitation Committees was left over until the next meeting.

HELP THE NEWSPAPERS

Don't have a "Clean Up and Paint Up Day" or "week" **only**—call it, and conduct it as a "Clean Up and Paint Up" **Campaign** and keep it going as long as it will, "Every day should be a clean up day" you know. But of course you will have to set a definite date for the Opening of the Campaign—your Mayor's Proclamation will do that most effectively—and there must be definite dates for various features of this work—the cleaning of alleys, the burning or removal of trash, garbage, etc., so that everybody can co-operate effectively and economically, and that the interest may be maintained from week to week.

Make It Pay Your Local Papers

Give the Campaign **all the publicity possible.** Get the "Clean Up and Paint Up" slogan and spirit in the air, and in the minds and on the tongues of everybody. Use space in the newspapers, **and extra space liberally,** to exploit the movement. It's "good citizenship and good business" that links up **conspicuously** with a public effort to make the home town a better place to live in. And this thought to business men—you hope your business will be helped by this work—and it will. The Newspaper Man hopes that his business will be helped—and he can help the Campaign more, and probably will devote to it more time and work and **space** (his own merchandise) **than anybody else. See that his business IS helped, and yours also, by liberal advertising.**

A Suggestion for Newspaper Announcement

Prepared by Hardware and Metal for use by newspapers

IF A———is to keep in line with the march of progress, a "Clean-up and Paint-up" campaign will have to be established as a regular yearly event.

The appearance as well as the progress of a municipality depends not entirely on the men at the head of affairs, but perhaps to a still greater degree on the interest and co-operation of the citizens as a whole. Creditable public buildings and well kept up parks go a long way toward making a town attractive, but when all is said and done it is the way in which the Average Home is kept up that brands the town. A city of neat homes, with fresh painted fronts and well-kept lawns is the kind of place which appeals to the stranger and which exercises sufficient spell over the resident to make him regard it as the most desirable place under the sun to live.

To the citizen with a sense of civic patriotism, therefore, it becomes a duty to keep his house and property neat and well ordered. The benefits which accrue to him as the result of his industry are not purely personal, but can be traced in the "uplift" of the town.

Taking it for granted that all readers are public-spirited, The Times feels that the suggestion for a "Clean-up and Paint-up" campaign in A———will meet with a ready response.

Every citizen will recognize that the Spring brings with it many features which are not entirely pleasant. When Winter's covering has been melted away, the ground is left in very unsightly condition. Odds and ends of things, rubbishy accumulations of all kinds are strewn in every direction. Until the rake and the spade have been brought to bear, the average yard looks thoroughly unsightly. But this is not all. After the wear and tear of Winter, the home needs an application of paint to bring it into accord with the season and, which is probably more vitally important, to prepare it for the effects of Summer heat. Paint is not only a decorative substance, but a preservative element as well. The properly painted home resists the elements, stands against the wear and tear of heat and cold and wet and fends off decay.

There are, of course, plenty of citizens who recognize the necessity of Spring cleaning and painting; who proceed with the work just as soon as the weather permits. On the other hand, however, there are plenty who do not recognize, unless stirred up to a sense of their duty in this matter; there are plenty of otherwise valuable citizens who will indefinitely postpone their cleaning-up this Spring—with resultant loss to themselves and to the community.

This is the reason why The Times is suggesting that a cure, "Clean-up and Paint-up" campaign be instituted. Let a week be set aside when all citizens should start in to give their homes a thorough cleaning and a larger number will do their share. If the movement can be made a thoroughly general one, A———will emerge from its week of home-cleaning a rejuvenated, beautified and attractive city, far removed from the unsightly place it has been during the Spring season in past years.

The idea has been followed out in many American cities in past years with a marked degree of success. The council sets aside a certain week and the people take up the idea with a right good-will. Every evening finds the man of the house and such of his children as are able to handle a rake or a spade busily engaged in remedying the ravages of the Winter season. Lawns are cleaned, hedges are trimmed, paths are straightened, garden patches are dug, fences are repaired and so on. When the week is up the place has been turned into a close approach to Spotless Town.

And now the idea has spread into Canada and is being taken up on every hand. In many Canadian cities and towns "Clean-up and Paint-up" campaigns are being held. Will A———keep up with the procession?

Here is a chance for the council. If the city fathers pass an ordinance to set aside a certain week for the purpose, a step will have been taken for a Cleaner, Brighter and Better City.

"How Can I Start a Campaign in Mytown?"

Instructions Issued by National "Clean Up and Paint Up" Campaign Bureau on How to Start a "Clean Up and Paint Up" Campaign in Yourtown—Excellent Results of Campaign in American Cities and Towns—The Movement is Spreading Rapidly in Canada.

THE answer is in three words—"**Go to it.**" That's slang, but it's good, because the Idea cannot be better stated—"**Go to it.**"

"Some details? **Ready!** Take your telephone in hand—Get a half-dozen boosters together—"the fewer the quicker" you'll get started. Talk it over and before you part, agree upon a meeting to be held a day or two later—each of you agreeing to have present at that meeting other certain ones whose interest will be valuable. If the Mayor and the livest Newspaper Man in town are not among the first half-dozen, they are the first men you want to make sure to have at this meeting. All the local papers, the city and school and health officials, the civic and business and women's clubs, the big business and manufacturing concerns—every force that can help, and every influence that could hinder, if it is ignored—should be represented at this meeting. When it is called to order—

1. Select a chairman, and a secretary.

2. Read this descriptive outline of the movement:

(Adapted from literature of the New England "Clean Up and Paint Up" Joint Committee.)

Mr. Chairman, Friends:

The National "Clean Up and Paint Up" Campaign Bureau, with headquarters in St. Louis, Mo., has extended to us an invitation to start in this town a local "Clean Up and Paint Up" Campaign.

In May, 1912, Allen W. Clark, publisher of a trade paper in St. Louis, Mo., first thought of the idea of having a National "Clean Up and Paint Up" Campaign. It was tried out and proved an immediate success, and has now grown into a really National Movement. The idea is to have every city and town set aside one week for a general public and private "Clean Up and Paint Up" to establish the five-word slogan everywhere, and create in the public mind a spirit of enthusiasm and a sense of intelligent co-operation; to enlist the active co-operation of the town or city authorities in all departments; in fact, everybody, old and young, to be asked to lend a hand to clean up property, indoors and out, during "Clean Up and Paint Up" Week, and thereafter.

The National "Clean Up and Paint Up" Campaign Bureau believes that there is great need of a systematic Clean Up in the cities and towns. A trip through this city shows many streets, yards, and open places that are littered with waste and rubbish, and are unsightly and unsanitary. If these are the conditions outdoors, exposed to view, what must be the conditions indoors in cellars, attics, and passageways in factories, tenement houses, etc.

It is hardly necessary to dwell in detail on these facts, as most of you know that there is great need for a thorough Clean Up, and with the Clean Up goes the Paint Up, so necessary to make the Clean Up permanent and to make things bright and create better living and working conditions for everyone.

I believe most all citizens mean to keep things clean and tidy, but they are careless and busy about regular duties and neglect to do the cleaning.

A "Clean Up and Paint Up" Campaign will remind the general public of the importance of this work. It will result in everybody taking hold and making a thorough job of it, and experience in other places, where such Campaigns have been held, indicates that after the Campaign is over property owners are much more apt to keep things clean than was the case before the matter had been so forcibly brought to their attention.

The "Clean Up and Paint Up" Movement was conducted very successfully in 1913 in the cities of St. Louis, Mo., Denver, Col., Buffalo, N.Y., Baltimore, Md., and 870 other towns. In these places enthusiastic campaigns were carried on that resulted in tons of rubbish and waste matter being carted away to the dump, hundreds of dull and grimy buildings being brightened up with a coat of paint, and many lawns and yards being trimmed up, flower beds put in, and neighborhoods beautified.

This is indeed a movement for homes and towns beautiful and to promote cleanliness, thrift and civic pride, and should appeal to every public-spirited citizen.

The "Clean Up and Paint Up" Campaign is along the line of other movements now being inaugurated for community betterment. Activity along this line means much to any communtiy in more wholesome and healthful conditions. A campaign of this kind is a step forward along fire prevention lines. It is bound to rid homes and factories of accumulations of rubbish that are liable to start fires, and so are a menace to the community.

Now regarding the business side of this Campaign, would say that it has been proven in other places that a Campaign of this kind creates a wholesome activity that will stimulate business in all lines. Good citizenship is good business, and merchants, manufacturers, and tradespeople are finding that it pays to push the "Clean Up and Paint Up" Campaign.

3. Introduce and adopt a resolution to start at once a "Clean Up and Paint Up" Campaign.

4. Organize at this meeting—select a President and other officers (we suggest enough vice-presidents to include every co-operating organization and element) and instruct the new President to appoint all the chairmen of the various committees within a day or two—these and the officers to constitute the Executive Committee. There should be committees on finance and publicity, one to provide wagons for the removal of rubbish, one to provide "clean street" cans, one to interest the school children, and one to interest all merchants to feature "Clean Up and Paint Up" articles in their displays and ads.

5. Adopt a resolution requesting the Mayor (or the Board of Health) to proclaim the Opening of the Campaign for the Cleaning, Sanitation and Beautification of the city.

6. Adjourn, after fixing date for a Get to Work meeting a few days later, which all these Chairmen and members of their committees will attend to plan their work.

Then promptly mail inclosed request for further co-operation.

Work Through Committees and Their Chairmen.

Get as many men and women as possible, to WORK, each at some specific thing. Don't make the mistake of heaping upon one willing and patient enthusiast all the detail and responsibility of this work. If you do, he will be completely overwhelmed with it within a few days while the rest of you will be thinking of a hundred things "the chairman ought to do."

Committees to do specific work, and Chairmen who will think and work and inspire suggestions and zeal among the members of their committees, are essential.

(Continued on page 57.)

A Well-Appointed Store in a Small Town

Many Interesting Features Found in a Listowel, Ont., Retail Hardware Store — Some Very Fine Stores Are Found in the Smaller Towns and Cities in Canada.

FURTHER evidence of the fact that many of our up-to-date retail hardware stores are found in the small towns is shown in the accompanying illustration which shows an interior view of the hardware store of S. Zilliax & Sons, Listowel, Ont., a town of about 4,000 population.

This store is 120 ft. in length and 22 feet in width, allowing plenty of room for adequately displaying goods.

The shelving on one side of the store is devoted almost entirely to the display of household goods, including enamelware, tinware, aluminumware, nickel plated copper goods, dairy and kitchen utensils, etc. Stoves are shown on the centre of the floor towards the rear of the store. On the right side of the store, immediately on entering, is found the tool department. A large number of samples are shown on the ends of shelf drawers. A very effective showing of saws, hammers, braces, draw knives, etc., has been made in one section of the wall casing. Another section has been used for displaying guns, rifles, etc.

The paint department is located near the rear of the store, but is always kept before the public by making extensive use of the show windows.

The wall shelving does not extend to the ceiling; the ceiling is exceptionally high and there is a distance of about six feet from the top of the shelving to the ceiling. This space is used for displaying various lines. At the present time the lines featured are tubs, bathroom fittings, hand saws, brushes and wooden-ware. With the exception of the tubs, the lines mentioned, all are shown on sample boards about three feet square, the most prominent in the illustration being the board showing bathroom fixtures. These sample boards are neatly covered with green baize and the displays can be changed or re-arranged at any time. Another commendable feature in connection with this store is the metallic ceiling which adds greatly to the splendid interior appearance of the store.

The members of the firm are believers in display methods and endeavor to always keep a sample of each line on display.

Good use is also made of advertising matter supplied by manufacturers and a large number of display cards, etc., are always noticeable in the store.

Hardware and Metal has often commented on the high standard of the hardware stores located in many of the towns throughout Canada and it is only necessary to visit some of the smaller places, in order to become convinced the hardwaremen have not been behind merchants in other lines of business in the matter of store improvements and equipment.

Interior Vlew of Zilliax & Sons' Hardware Store, Listowell, Ont.

"Eliminate all the wrong things you are doing. Make good resolutions intelligently. Make a pledge to yourself. Accumulate all experiences which will reinforce motive—keep away from temptation. Seek associates that will help you. Better be alone than in bad company."—John H. Patterson.

HARDWARE AND METAL

VOL. XXVI. No. 15 Toronto, Canada, April 11, 1914 Two Dollars per Year

The Parcel Post System

IN LAST week's issue of Hardware and Metal appeared complete regulations governing the Canadian Parcel Post System, recently inaugurated. A complete rate card for each province also appeared, giving the rates in effect in all parts of Canada. Hardware and Metal was the first trade paper in Canada to publish the complete regulations, and rate cards in their entirety for the benefit of Canadian hardwaremen. Merchants should be particular in filing last week's issue, on account of the valuable information contained therein. Every hardwareman, no motter where located in Canada will find full information telling him the rate of postage from his postoffice. The regulations governing methods of packing, wrapping, etc.. are also given, and are a valuable guide for retailers. The Parcel Post in Canada is but in its infancy. Before the advent of the Parcel Post System a great deal of apprehension existed among retail merchants owing to the fact that they thought when the system came into force, the mail order houses would secure great advantages which would be detrimental to the interest of the retail merchant, especially those located in the smaller towns, and cities. The mail order houses have not been slow to take advantage of the new system, and they are using it to a great extent for small parcels, but they are not the only ones being benefited. Many of the smaller merchants who at first opposed the Parcel Post system are now using it to a great extent. The local merchant has the twenty-mile local zone, which gives him a decided advantage over the mail order house. This local zone is of great value to the retailer who will make use of it, but it is of little or no value to the merchant who does not figure out how he can use it to secure business for his store. Some merchants have been partially handicapped in their planning on account of not having a complete set of regulations and rates to guide them. Hardware and Metal has at various times given all available information regarding the new system, but in last week's issue a complete list of regulations and rates was given in the hope that retail hardwaremen wiuld be in a better position to study the regulations, and formulate some plan of action which could be applied to their respective businesses, for the purpose of combating the mail order houses that are now securing much additional business on account of the adoption of the Parcel Post System in Canada. Much of the apprehension which existed among retailers some months ago has entirely disappeared and Parcel Post is looked upon generally as a public necessity. Every retail hardware merchant should endeavor to secure extra business through the use of the Parcel Post System.

The Business Situation

HARDWARE jobbers, particularly those in Ontario and Quebec are still making shipments of Spring goods. Retailers report that Spring trade is opening up in a very satisfactory manner. Considerable optimism is exhibited by retailers, especially those located in the smaller towns and cities and there is an evident tendency toward greater confidence. In the West conditions are showing gradual improvement. The metal markets are gradually recovering and business in this line is showing slight improvement. Paint manufacturers appear to be quite busy and report that the month of March made a splendid showing as far as the paint business was concerned. Commenting on the business situation, the Financial Post says:

"But facts, such as generally guide business men, are of a character that compel caution. March bank clearings, for instance, indicate beyond doubt that trade decline is still in progress. Railroad earnings are also equally definite on that point. Foreign trade decline has not yet been arrested, according to press reports from Ottawa. Export trade will be affected somewhat by the decline in food prices in Britain. Elsewhere we publish the Economist index numbers, which show a very marked decline in cereals as compared with January last, and with March of 1913. Canada, however, as indicated a week ago, is in the position of having, to a very large extent, marketed her cereal crop. Some still remains in the farmers' hands, and will not get to market for some little time yet."

The Tariff Changes

ELSEWHERE in this issue is given detailed information regarding the principal changes effected by the new tariff schedule submitted by the Finance Minister. There are many changes which affect lines connected with the hardware trade. One of the principal changes in connection with the iron and steel industry was the imposition of a duty on wire rods, which have hitherto been on the free list. This duty will be $2.25 British preference, and $3.50 per ton general and intermediate. There was considerable opposition to this concession owing to the fact that some of the nail-makers claimed that only firms would be benefitted under the new protection afforded. The existing duty on nails was sixty cents per keg and average about thirty per cent. A provision was made for a drawback on wire of nine, twelve and thirteen gauges for wire fencing on farms. The Minister also proposed an increase in the existing drawback of the duty on imported pig-iron subsequently used in the manufacture of articles for export. The Minister stated that under the existing drawback manufacturers who manufactured for export had a special inducement to buy pig-iron abroad, in that only one-third of the duty paid on the raw material imported was refunded under the drawback when the imported ore had been melted down with Canadian ore. The new regulation would provide for a drawback of the entire duty.

Under the existing tariff wrought or seamless iron or steel tubing, over four inches in diameter, was made subject to a duty of 10 per cent. British preference, 12½ per cent. intermediate, and 15 per cent. general, while tubing four inches or less in diameter was subject to rates of 20, 30 and 35 per cent., respectively. It was proposed to increase the duty to these latter figures on all tubing up to ten inches in diameter. This increased protection is further emphasized by a changing of the 99 per cent., heretofore granted in drawback on imported material used for manufacturing in Canada, to 50 per cent.

Some lines of agricultural implements are also affected by the new tariff. It is hard to predict just at present what affect the tariff changes will have on lines closely allied with the hardware trade, but hardware merchants should watch developments closely and be prepared to take advantage of any favorable opportunities for buying which may be presented.

Who Controls Fire Marshall

THE announcement of the Ontario Government's intention to appoint a Fire Marshal will be received with genuine satisfaction by the retail merchants of the Province. The need of some such official has long been urged, for fire losses have been mounting steadily higher until now Canada's per capita record exceeds that of all other countries in the world. The inevitable result has been higher rates, and the certainty of sharp advances in the future.

The official statement of Hon. J. J. Foy contains no definite information as to the powers of the new official. The bill gives a Provincial Fire Marshal power to investigate into the cause and origin of any fire, to enter summarily into certain buildings and order necessary fire precautions to be taken, and any inflammable matter lying about removed. Structural changes may also be ordered. The insurance companies are to pay the cost of this service by an assessment on their premium income, a provision that was embodied in a resolution passed with the first reading. Whether the official will be subject to one of the Ministers of the Crown has not been made clear, nor whether there will be any appeal from his ruling. This point was brought up at the late O. R. M. A. convention, when a protective resolution was passed along the following lines: "That it is the opinion of this meeting that if it is the intention of the Ontario Government to appoint a Fire Marshal for the Province of Ontario, that he should be appointed under the direction and authority of a Minister of the Crown so that in the event of any severe restrictive measures being imposed upon us by the said fire marshal, or his deputies, that we, as merchants, will have access to the minister and be able to lay our complaints before him." This position was supported by several of the men at the convention, and it is safe to say is held by the majority of merchants throughout the country, because a "new broom," undirected, is liable to compel arbitrary and expensive measures that may prove burdensome and out of proportion to the benefits sustained.

Several Tariff Changes Announced in Budget

Reduction in Duty on Agricultural Implements — Wire Rods, Hitherto Free, Now Subject to Duty—Increase in Tariff Upon Iron and Steel Tubing—Sixty-One Schedules of Tariff Changes Submitted.

OTTAWA, April 6.—The budget brought down to-day by Hon. T. W. White, Minister of Finance, contains many features of great importance to the hardware trade. Wire rods, hitherto on the free list have been made subject to duty, with the exception of wire for fencing, which is made subject to drawback. Brass sheets, bars and rods hitherto free, are made subject to 10 per cent. tariff. Agricultural implements have been reduced from 17½% to 12½%. Other changes were in the form of increased protection for iron and steel beams, increase in drawback on imported pig iron used for manufacturing, increase in tariff upon iron and steel tubing. Bituminous coal, for smelting and foundry purposes only, made subject to drawback of 99%.

Galvanized hoop steel changed from 30% to $7 per ton. Coil chain and links under 1⅛ inches, changed from 5, 7½, and 10% to 15, 20, and 20 per cent.

Other lines affected are malleable sprocket chain, mowing machines, harvesters, malleable castings for implements, cork slabs, iron and steel sections for hames and saddlery hardware, wool waste in the white, jute yarn and canvas, tape lines.

Portions of the Finance Minister's speech together with tariff changes are here given:—

Iron and Steel.

During the past two years the conditions of the iron and steel industry of Canada had from time to time been brought to the attention of the Government, and it had been suggested that further aid or additional protection should be granted to it by a continuance of bounties or an increase in the tariff. Mr. White reviewed the methods and extent of the aid given in the past to the steel industries.

"There is no doubt," he said, "that among a large portion of the public there is a decided objection to the the principle of bounties. My own view is that bounties are justifiable to call into being new industries where capital which is always timid as to experimental ventures, requires special inducement to enter upon their development, but after such enterprises have been called into being and firmly established it is difficult to justify further aid of a direct character."

Pig Iron and Billet Steel.

Mr. White's view was that the tariff upon pig iron and billet steel should be of moderate amount only. To raise the existing duties on these products would necessitate an increase of duty upon nearly all the products into which they enter as material. These would embrace all agricultural implements, all foundry and machine manufacturers' products, stoves, and a multitude of other articles in general use whose price would be raised to the consumer.

Except on wire rods the range of protection on finished steel products was 25 per cent. to 35 per cent. The steel companies had enjoyed two good years and the future was good.

Item 379 of the tariff, continued Mr. White, imposed a duty on rolled iron and steel beams, channels, angles, and other rolled shape weighing not less than thirty-five pounds per yard, of $2 British preference, $2.75 intermediate and $3 general per ton, these rates being confined to what were known as merchant milled products. Item 377 in which the same products were included, imposed an n. o. p. tariff of $4.25 British preference, $6 intermediate and $7 general. Therefore the total duty on milled products up to 35 lbs. was $4.25 British preference, $6 intermediate and $7 general.

On Merchantable Products.

The reason for the distinction, said Mr. White, was that the larger merchant milled products were not manufactured in Canada, and they were not manufactured in large tonnage to-day. The Algoma Steel Co. and other firms had represented to the Government that if the tariff rate on lighter products be extended to heavier ones they would be enabled to get capital for the erection of larger mills for products weighing up to 120 lbs. per yard. They did not ask for the immediate imposition of this duty, but that authority be taken by the Governor-General-in-Council to put the higher rates into effect when they were satisfied the heavier merchantable products could be manufactured in Canada, following somewhat the same course as was done with the tariff on steel rails. "We propose therefore," said Mr. White, "to take authority to bring the tariff rates I have mentioned in effect in respect of merchantable milled products weighing up to 120 tons per lineal yard, to be brought into effect when the Government was satisfied that these products could be manufactured in Canada."

"What will be the rates?" asked Sir Wilfrid Laurier.

"The rates will be $4.25, $6 and $7, the same as on the lighter products," said Mr. White.

Duty on Wire Rods.

The Finance Minister then stated that the Government had been requested to impose a duty on wire rods. At present these were in the free list. They were used as raw material for wire fences and wire nails. Two Canadian mills at present manufactured wire rods in Canada, the Dominion Iron and Steel Company at Sydney, and the Steel Company of Canada at Hamilton. Both were in partial operation. The importation of wire rods into Canada in 1913 was 92,000 and the demand 150,000 to 200,000 tons. Most of the importation was from United States and Germany.

The price at Pittsburgh for wire rods was $25 per long ton, but this low figure was accounted for by the depressed condition of the iron and steel industry in the United States. The price of wire rods in Pittsburgh plus the freight rates to Hamilton, was less than the average factory cost to-day. The Canadian steel companies claimed that they could supply the whole consumption in Canada to-day, and had asked a moderate degree of protection, holding that they were entitled to such a tariff as would enable them to compete on fair terms with the United States and Germany in Canada. This, however, had been opposed by the smaller nail makers in Canada. These smaller manufacturers, urged that the two steel companies, which also manufactured nails, would be in a position to compete unfairly with them.

Unfair to Rod Makers.

Mr. White pointed out that two Canadian companies manufactured respectively 17 and 52 per cent. of the whole Canadian nail production. He pointed out also that the tariff on wire nails was 60 cents per keg, or 30 per cent. The nail makers were, therefore, at present protected, while the makers of wire rods were not. The Minister, therefore, had arrived at the conclusion that the apprehensions of the nail makers were not well founded, and believed it was most desirable that a wire rod industry should be established in Canada by means of the tariff, the only method possible. He therefore proposed a duty of $2.25,

British preference; $3.50, intermediate; and $3.50, general. There would be no increase in duty on wire or wire nails.

The Minister then went on to say that he recommended a drawback in respect of wire of .9, .12 and .13 gauges, used in the manufacture of wire fencing for farmers. Mr. White explained that the Government proposed to amend the law providing a drawback to be paid on pig iron used in the manufacture of articles exported. Under the present law the manufacturer could receive a drawback for only a portion of the iron used in articles sold abroad. He had, therefore, a special inducement to buy all his ore abroad and receive a drawback on all the iron in exported product. The Government proposed to take power to grant by Order-in-Council a drawback of duty on all the pig iron used in exported articles, such drawback however, not to be paid on a quantity exceeding that which has been imported by the manufacturers and on which duty has been paid.

The Minister said that it was proposed to place the charcoal iron furnaces on the same basis as the coke furnaces, by admitting charcoal imported for use in the production of pig iron free of duty. Mr. White said that there were charcoal plants at Deseronto and Parry Sound which needed this encouragement.

Bituminous Coal.

A change was also proposed in regard to bituminous coal imported by proprietors of coke ovens and converted into coke at their ovens for the smelting of metals from ore or the melting of metals. On such bituminous coal a drawback of 99 per cent. of duty would be allowed. Mr. White explained that at present coke was admitted free, and bituminous coal was subject to a duty of fifty cents a ton, except when imported by proprietors of smelting works and converted into coke at their works for use in smelting. As proprietors of coke ovens would, under the present law, be forced to meet unfair competition from the United States, the Government proposed to extend them the same privilege as was now enjoyed by proprietors of smelting establishments. The Government was satisfied that no injury would be done to the Canadian coal-mining industry.

A change was also proposed in the tariff on wrought and seamless iron or steel tubing. Up to the present such tubing over four inches in diameter has been subject to the following duties: British preference, 10 per cent.; intermediate, 12½ per cent.; and genral, 15 per cent. Tubing four inches and less in diameter has paid the following duties: British preference, 20 per cent.; intermediate, 12½ per cent.; and general, 15 per cent. The reason for this was that until recently the larger tubing was not manufactured in Canada. Now, however, Canadian firms have begun to make it, and the higher duties mentioned above are to be made applicable to all such tubing up to ten inches in diameter. Moreover, the drawback granted on the material used in imported tubing is to be reduced from 99 per cent. to 55.

Agricultural Implements.

Mr. White said that because of exceptional conditions implement manufacturers were carrying large inventories, and did not expect that their output this year would reach that of the year before last.

He felt that any extreme action might be disastrous. However, he told the House that for more than a year past the Government had been carrying on an inquiry into the cost of manufacture of implements in Canada and in the United States.

Replying to Mr. Turriff, the Finance Minister said that Mr. Costello of the Customs department, had studied the cost of production, and he himself had examined the balance sheets of the manufacturers with a view to learning whether or not they were making excessive profits.

"We have decided," he said, "that on only one range of articles can the duties be lowered without violation of the principle upon which the tariff is based." That range of articles was covered by the tariff item "harvesters, binders, reapers and mowers," now dutiable at 17½ per cent. The manufacturing of those implements was a highly developed industry, and some of the firms engaged in it were able to export a large portion of their output. The Government had reached the conclusion, therefore, that the duty on harvesters, binders, reapers and mowers might be reduced from 17½ to 12½ per cent. It had decided, in the interest of the farming community, to allow the drawback on iron and steel used in the manufacture of these implements to stand.

That drawback was equivalent to about 2½ per cent. on the duty.

Brass Sheets, Bars, Etc.

It was also the intention of the Government to restore the duty of 10 per cent. on brass in sheets, bars or rods. That duty had been abolished by order-in-Council when brass was not manufactured in the country. To-day it was manufactured in Canada by a company established recently at Toronto.

Mr. White then submitted the resolutions giving effect to the tariff changes announced.

Principal Changes.

The principal changes effected by the new tariff schedule submitted by the Finance Minister are as follows:—

Item 379—Rolled iron or steel angles, beams, channels and other rolled shapes and sections of iron or steel not punched or drilled or otherwise further manufactured, weighing over 120 pounds per lineal yard, not otherwise provided, not square, flat, oval or round shapes, and not being railway bars or rails, changed from $2, $2.75 and $3 to $2, $3 and $3 per ton under British preference, intermediate and general tariffs, respectively.

(New item)—Item 39C— Cassava flour, when used in the manufacture of explosives is made free under all tariffs.

(New items)—99A—Dried or evaporated bananas, per pound, are made free under British preferential and one-half cent. under general and intermediate tariffs.

113—Cocoanut, desiccated, sweetened or not, per pound, made 3 cents, 4 cents and 4 cents instead of 3 cents, 4 cents and 5 cents respectively.

(New item)—157A—Amyl alcohol or refined fusel oil, imported under license from the Inland Revenue Department, to be denatured for use in the manufacture of metal varnishes or lacquer, is made free.

114—Item re duty on newspapers and magazines and weekly literary papers, unbound, and fashion plates, as amended by adding the words: "When imported in single copies in sheet form with magazines or periodicals, trade journals," these being free.

(New item)—208A—Chloride of lime and hypochlorite of lime, in packages of not less than 25 pounds, transferred from the free list and made dutiable at 10 cents and 15 cents per hundred pounds. When in packages of less than 25 pounds, 17½ per cent., 25 per cent. and 25 per cent., instead of free.

210A—Caustic soda, in packages of not less than 25 pounds, changed from free to 1-5 cent, 3-10 cent and 3-10 cent; when in packages less than 25 pounds the duty is 17½ per cent., 25 per cent. and 25 per cent.

296—Talc, which was formerly free, is put in the unenumerated list and thus made dutiable at 15 per cent., 17½ per cent. and 20 per cent.

306A and 306B (new)—Building stone, sawn on four sides, is made dutiable at 15 cents per 100 pounds, and when further manufactured at 45 cents per 100 pounds, instead of 20 per cent., as formerly.

(New item)—315A—Carbon electrodes of over 35 inches circumference, changed from 3 to 20 per cent.

(New item)—327A—Silvered lenses, rate reduced from 30 per cent. to 15 per cent.

353A—Aluminum leaf, reduced from 27½ per cent. to free.

375A—Ferrosilicon made $4.50 a ton, instead of $2.50.

375B—Ferro-manganese and spieg-

eleisen changed from $2.50 a ton to free.

Hoopsteel and Tubing.

378—Galvanized hoopsteel changed from 30 per cent. to $7 per ton, general tariff.

398—Wrought or seamless iron or steel tubing, from four to ten inches in diameter, changed from 10, 12½, and 15 per cent. to 20, 30, and 30 per cent.

(New item)—398A—Wrought or seamless iron or steel tubing over ten inches in diameter changed from 10, 12½, and 15 per cent. to 10, 15, and 15 per cent.

410—Coil chain and links 1¼ inches in diameter and over changed from 5 per cent., 7½, and 10 per cent., to free, 5 per cent., and 5 per cent.

410A—Coil chain and links under 1⅛ inches, changed from 5, 7½, and 10 per cent. to 15, 20, and 20 per cent.

411—Malleable sprocket chain or link belting chain made free when used in agricultural implements, whereas it was formerly free for all purposes.

Mowing and Harvesting Machines.

445—Mowing machines, harvesters, self-binders, and reapers changed from 12½, 17½, and 17½ per cent. to 12½ per cent. on all three tariffs.

445A—Malleable castings for implements mentioned in 445 are retained at 15, 17½, and 17½ per cent.

446A—Parts for traction ditching machines, formerly dutiable, made free.

453A—Electric dental engines changed from free to 15, 27½ and 27½ per cent.

471—Rolled round wire rods in the coil of iron or steel, not over ⅜ of an inch diameter, changed from free to $2.25, $3.50 and $3.50 per ton, when imported to manufacture wire in the coil, for use in the manufacture of chain changed from free to $2.25, $3 50 and $3.50.

478A—Iron and steel sections for hames and saddlery hardware, placed on the free list, where formerly they paid a general tariff of $7 per ton.

494A—Cork slabs, boards, planks and tiles produced from cork waste or ground cork, changed from 15, 17½ and 20 per cent., to 20, 30 and 30 per cent.

Yarn, etc., Put on Free List.

533A—Garnetted wool waste, in the white, transferred to the free list instead of being dutiable at 7½, 10 and 12½ per cent.

542—Jute or hemp yarn, plain, dyed or colored, use limited to prevent free importation of twine.

543—Linen yarn for hose is transferred to the free list, where the general tariff was formerly 25 per cent.

546—Jute canvas, uncolored and not finished, transferred from free list to 7½ per cent., 10 per cent., and 10 per cent.

548A—Paper twine for furniture, changed from 20, 22¾, and 25 per cent. to free list.

575—Tape lines are given a uniform duty of 25 per cent., 32½ per cent., and 35 per cent., where formerly there were several rates of duty.

577—Silk in the gum or spun silk for silk thread, transferred to the free list.

651A—Buttons of vegetable ivory, changed from 22½ per cent., 30 per cent., and 35 per cent. to five cents per gross plus 20 per cent., five cents plus 30 per cent., and five cents plus 30 per cent.

671A—Parts of corset clasps and wires transferred to the free list, where formerly dutiable in the general tariff at 3 per cent.

Foreign Life-Saving Presents Free.

692A—To allow foreign Governments to make presents for saving of human life without duty being charged on same.

HORACE CHEVRIER,
Re-elected president of the Manitoba Provincial Board of the Retail Merchants' Association.

The provisions for drawbacks were announced as follows:—

1,017—Lapwelded tubing of iron or steel, not less than four inches in diameter and used in casing wells or for natural gas transmission, 50 per cent.

1,019—Bituminous coal, drawback of 99 per cent. of duty extended to coke ovens, other than those owned by smelting works, when intended for smelting and melting ores.

1,021—Wire rods used for the manufacture of fencing wire, 9, 12 and 13 gauge, 99 per cent. of duty.

1,022—Charcoal used for smelting of ores, 99 per cent.

1,023—Rolled hexagon iron or steel bars used in the manufacture of cold drawn or cold-rolled iron or steel bars or turned and polished shafting, 99 per cent.

1,024—Yarn, composed chiefly of wool, No. 30 and finer, in white, when used in the manufacture of socks and stockings, 99 per cent.

Under section 1,212, aigrettes, egret plumes, osprey plumes and the skin or plumage of wild birds are prohibited for importation, but this does not apply to ostrich feathers, English pheasant and Indian peacock, the plumage of game birds or birds imported alive or to specimens for museums or educational purposes. The prohibition will become effective on January 1, 1915.

R.M.A. CAMPAIGN IN MANITOBA.

The vigorous work of the Retail Merchants' Association in the sister Provinces of Alberta and Saskatchewan, has stirred Manitoba up to a similar effort and the provincial board has started a campaign to cover every district of Manitoba. Among the features of legislation in Saskatchewan that are attracting notice in Manitoba is the operation of the Small Debts Act and the board will endeavor to secure legislation along the same line.

During the past year, however, much has been done even without the Province-wide organization. Success has attended the Board in opposing some objectionable amendments to the Bulk Sales Act, the King's Bench Act and the Chattel Mortgage Act, the Law Amendments Committee of the Legislature upholding the merchants in all their claims.

Such has been the confidence inspired in the officers of 1913-1914 that all were re-elected unanimously at the annual meeting, as follows:

President—Horace Chevrier.
First Vice President—W. T. Devlin.
Second Vice—W. J. McPherson.
Treasurer—H. P. Story.
Secretary—J. F. Kennedy.

LIGHT AND WINDOW DISPLAY.

Dark blue reflects 6½ per cent. of the light falling upon it.
Dark green, about 10 per cent.
Pale red, more than 16 per cent.
Dark yellow, 20 per cent.
Pale blue, 30 per cent.
Pale yellow, 40 per cent.
Pale green, 46½ per cent.
Pale orange, nearly 55 per cent.
And pale white, 70 per cent.

A window finished in light oak can be lighted with much less wattage than a window finished in dark mahogany; likewise, a window in which white goods are displayed.—American Architect.

Every time you allow yourself to get angry you lose a few minutes or hours of happiness you might have had.

Western Freight Rates Judgment by Board

Territory West of Great Lakes Divided Into Three Sections—A Standard Scale of Maximum Freight Rates is Fixed for Each Section — Special Distributing Tariffs on a Lower Basis Are Authorized From Recognized Distributing Centres.

OTTAWA, April 7.—The judgment of the Board of Railway Commissioners in what is known as the western rates case was issued this afternoon.

After dealing with various arguments of counsel, the judgment proceeds to outline a comprehensive basis of tolls and a complete rate structure for all railways in Western Canada subject to its jurisdiction.

Three Sections in West.

The territory west of the Great Lakes is divided into three sections. The first is called the Prairie Section, extending from the Great Lakes to the mountains; the second, the Pacific Section, including mainland rail lines in British Columbia, and the third, the B. C. Lakes Section, including the inland navigable waters in that province.

Maximum in Each Section.

A standard scale of maximum freight rates is fixed for each section. The lowest scale in the West, now known as the Manitoba standard, has been amplified to show rates up to two thousand and one hundred miles, and will apply throughout the entire prairie section and on the British Columbia lakes, abolishing the higher scale now charged in Saskatchewan and Alberta. What will be known as the Pacific scale is on a somewhat higher basis, and will govern in Pacific territory. These changes result in substantial reductions from the present standard maximum scales in Saskatchewan, Alberta and British Columbia.

Special distributing tariffs on a lower basis are authorized from recognized distributing centres, the reduction from the standard tariff of each territory being 15 per cent. of the prairie standard scale. The following first-class rate examples indicate the character of the reductions, the other classes being proportionately scaled:—The first-class rate from Winnipeg to Regina is reduced by 8 cents, to Swift Current by 9, Calgary 12, Revelstoke 15, Saskatoon 13, Edmonton 16, Lethbridge 10 cents per 100 pounds. From Regina the first-class rate is reduced: To Broadview by 3, to Swift Current 6, Medicine Hat 7, Colonsay 13, Saskatoon 6, and Wilkie 18 cents per 100 pounds. From Saskatoon the first-class rate is reduced: To Hardisty by 7, Wynyard 4, Davidson 4 cents per 100 pounds. From Calgary: To Regina 10, MacLeod, 3, Edmonton 4, Lethbridge 3, Cardston 4, Fernie 8 cents per 100 pounds. From Edmonton: To Saskatoon 4, Camrose 6, Wetaskiwin 6, Calgary 4, High River 7, Lethbridge 9 cents per 100 pounds; Similar reductions are made from other prairie jobbing centres. From Vancouver to Ashcroft 14 cents, Kamloops 20, Revelstoke 26, Nelson 15, Calgary 7 cents per 100 pounds.

Basis of Through Rates.

Through rates from eastern to western Canada are based on those charged from Port Arthur or Fort William. After citing reductions already made by order of the board in the Regina rate case, further reductions are made and a more uniform basis adopted. Examples of the new rates from lake terminals are given in the accompanying panel, those to other points being similarly scaled.

Little Change in Cement.

The rates on cement from Winnipeg are shown to vary little from those of Ontario, and are not reduced, but the higher rates from cement plants in Alberta and Saskatchewan are reduced to the Winnipeg scale.

Lumber and joiners' work from British Columbia to prairie destinations have been already reduced, following the board's order in July, 1913.

The rates on sugar from Vancouver remain unchanged, the complaint of the British Columbia Sugar Refinery not being sustained.

Pig Iron Reduced.

Ores, concentrates, and smelter products in and from British Columbia are found to constitute a large percentage of the traffic of that province, and the rates are found remunerative only in the sense of contributing to the general prosperity.

The rate on pig iron from Port Arthur and Fort William to Winnipeg is reduced from 20 cents per 100 pounds to $3 per gross ton, or 13.4 cents per 100 pounds.

Coal Rates Cut.

Coal rates from Lethbridge and other Alberta mines are substantially cut. For example, from Lethbridge to Calgary, from $1.80 per ton to $1.45; to Edmonton, from $2.85 to $2.20; Swift Current, $2.40 to $1.90; Regina, $3.10 to $2.65; Virden, $4.10 to $3.40; Saskatoon, $3.95 to $3.30 per ton. From the Souris mines reductions made by the board in the Alameda case are confirmed and others made. Thus, from Estevan to Brandon, from $1.70 to $1.40; to Carberry, from $1.90 to $1.50; Emerson, $2.30 to $2; Rapid City, from $2 to $1.60; Swift Current, $2.15 to $1.70; Colonsay, $2.40 to $1.80; Saskatoon, $2.60 to $2.10; Yorkton, $2.80 to $2.20 per ton. From Merritt, B.C., to Yale, from $1.80 to $1.65; to Kamloops, from $2 to $1.75; to Sicamous, from $2.50 to $2.20; to Penticton, from $3.30 to $2.90; to Nelson, from $4.10 to $3.65 per ton.

Origin of Freight Rate Case.

Western freight rates in one form or another have engaged the attention of the board since its inception in 1904. The complaint of the Vancouver Board of Trade in what is known as the coast cities case, alleging discrimination, was preferred before Commissioners Blair and Mills on August 25 of that year. It was again brought up in another form in October, 1909, supplemented by an application of the British Columbia Gov-

(Continued on page 57.)

The Inside History of a Hardware Business

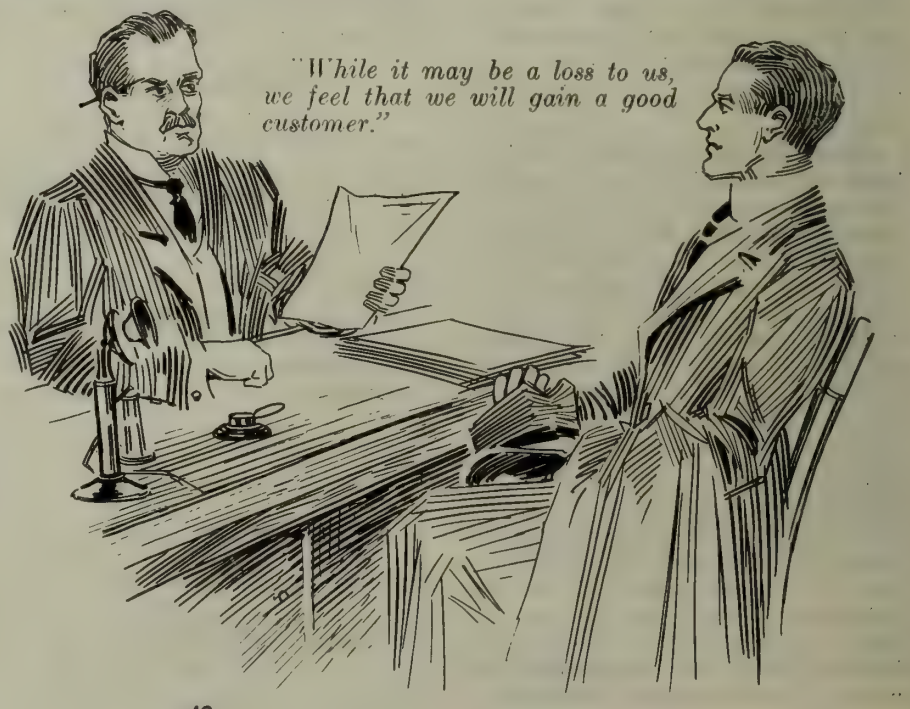
A Story of the Fortunes of a Young Hardwareman Who Has Turned a Business That Was on Its Last Legs Into One of the Most Flourishing in His Province.

By Byron J. Morrow.

IT was largely by accident that I became a hardware merchant. Up to the time that I acquired my present business I had never intended to go into the retail end permanently, my ambitions being fixed in another direction. However, I am now very well pleased that the chance came to me and that I took it; for my experience as a retail hardwareman has been a pleasant one on the whole and a reasonably profitable one. In addition to a growing business I now have a comfortable bank balance which permits me to take my discounts regularly and I have sundry lots here and there which are going to be worth a lot of money some day.

I started my business career as a clerk in a Toronto hardware store. Leaving school after putting in one year at the Collegiate, I applied for a job with a hard-headed old country man who had been in business for over twenty years without making a single change in his store or in his personal routine during the whole time.

He was very cautious in his methods and limited in his ideas. The store was a dingy little place and the stock carried was just exactly what one found in the typical hardware establishment of forty years ago. Nevertheless the boss — he has been dead many years now—taught me a great deal during the four years I was with him. He knew the lines he was carrying thoroughly and he reflected an atmosphere of rugged honesty and conscientious singleness of purpose which I believe had the effect of instilling a share of those qualities into all who came in daily contact with him, including myself.



I soon tired of the gloomy little store, however. I was like a young pup tugging at the chain which restricts his activities to a small area. Seeing the larger stores downtown stirred in me a feeling of contempt for the comparatively humble place where I was employed. I had several chances to get into larger retail stores but after investigation turned them all down. They did not, I found, promise any better future ultimately than the position I was holding. My father and mother were both born in Glasgow and it will, therefore, hardly be necessary to state that among my various mental attributes is a sense of canny foresight. I have never taken any important step in my life without thinking it over well first, and to this I credit very largely what measure of success I have had.

Finally I got a chance to go out on the road with a hardware jobbing house and this proposition I accepted. I went into the work with a renewed enthusiasm for I had become rather disgusted with the retail business as represented by the store where I had worked and this new position looked like the opening of a brighter and bigger future. And I soon found that I needed all the enthusiasm I could scare up to keep going, for the house put me on a new territory. This ground was covered very thoroughly by two rival houses and orders were rare events with me for a while. I gritted my teeth and kept going, however. Every rebuff I accepted with a smile—and there were plenty of them—and I don't think that I gave up a single prospect during the eighteen months that I covered the ground. During my year at high school we were given a series of stories from mythology to read and one of them always stuck in my memory. It was that of a giant Antaens who gained renewed strength every time he touched mother earth so that whenever he was knocked down by an opponent he came up more full of fight than ever. I often thought of that story after I had been given a particularly hard throw-down by one of the men I was calling upon. "Cheer up," I would say to myself. "Here's where we have to play old Antaens again. Every successful man is an Antaens in his own line."

In the meantime I began to pry away a share of the business from the other fellows and when I had developed the district to a point where it was beginning to pay, the house transferred me to a larger and more important territory. I had made good.

From that time on my whole mind was focused on the wholesale end of the business. I became convinced that my future would best be served by staying with the house for all time. I set up in my mind the securing of a position on the buying staff as the ultima thule of my ambition. In consequence I dismissed the idea of ever getting into business for myself and did not look for opportunities in that line. But the opportunity came of its own accord.

One of my regular customers in a town of about 9,000 population had been getting into the "bad books" of the house. He was very slow in making payments and, if one were to judge from the condition of his store and the gradual shrinkage in the size of the orders he placed with us, his business was on the down grade. I was warned by our credit man to watch this account. Personally I believed that the man had never been interested in hardware. He

"While it may be a loss to us, we feel that we will gain a good customer."

inherited the business from an uncle, taking it over without a previous day's experience in the business—or in any other kind of business for that matter. He was always talking orange growing and had a new scheme for running an orange ranch in Florida or a cocoanut farm in Borneo, every time I called. That was all he seemed to be interested in—to get off somewhere in a tropical clime and run a fruit farm with plenty of native help to do the work.

One day I found him in a state of deep melancholy. He was sitting back in his dingy little office, literally up to the neck in bills, with his hair rumpled up where he had been running his hands through it—a favorite trick of his—and a look of half frightened determination in his eyes.

"I've got to sell out, Al," he said. "I'm right up against it financially. A man with any head for figures could soon straighten the muddle out, I guess, but it's beyond me. It's a case of sell out or go smash."

"Why not sell out and get down to the orange country?" I suggested.

"That's what I've always intended doing," he said. "But what worries me is that after I've got things fixed up here there won't be enough left to buy half an acre."

I traveled on to the next town and got a long distance call there to go back and see him at once. Suspecting that it had something to do with his account, I complied.

"Look here, Al," said the unfortunate hardwareman, when I walked into the store next morning. "Why not buy this business, yourself?"

"No thanks," I rejoined, rather in a huff, for I was a busy man and did not relish being set a day off my schedule to talk over a proposition of this kind. "I don't intend to go into retail myself."

"I'm going to offer you a bargain," said Burton. We will call him Burton, chiefly because that was not his name.

And he certainly did. His stock had dwindled down to about $5,000, but it was in reasonably good shape. This he offered to me at 75 cents on the dollar if I would pay him cash. His store fixtures he agreed to throw in for $100, but there was no particular generosity in the offer. His good will he was willing to put in without any monetary consideration and, on the whole, it was not worth very much more than that. If I would give him $3,850 he would hand me over the business, lock, stock and barrel. With this money and whatever he could realize on his book accounts, he reckoned to be able to square off all his debts and start for the south with one thousand dollars clear.

At first I refused to consider the proposition but it kept revolving itself in my mind, and I gradually found myself thinking how nice it would be to own a business of my own, to have the sole and final "say," to have in my own hands the making or breaking of my financial prospects. "Allen Hardy" would look good on letter heads and on a big sign over the store, I decided.

My mind was already made up, I guess, when I decided to go in and talk it over at headquarters. I had been a saving beggar and had carefully shunned the "little games" and the bar-room evenings which ate up the salaries of many travelers of my acquaintance. I had something over $2,000 in the bank and I owned a lot in a town out West—one of those "coming" towns which have so far failed to arrive but which may get started on the road to prosperity any day. I knew where I could unload this lot at the price I paid for it plus taxes paid during the three years I had owned it. Altogether I reckoned my spot cash worth at $2,900, and I knew that my father would back me for the balance.

So I went in and had a talk with the sales manager. He was loath to lose me for I had been turning him in a good volume of business, but he did not put any obstacles in my way. I saw the president and received encouragement from him.

"We believe in you, Mr. Hardy," he said. "While it will be a loss to us, we feel that we will gain a good customer. You will need a line of credit, I suppose?"

"Yes," I replied, submitting the terms of a plan that I had drafted up.

I wanted a line of credit running up to $3,600. This I agreed to pay off in equal monthly instalments, clearing off the total in a year's time and carrying the interest in the meantime. In addition I agreed to pay for all subsequent purchases on a regular thirty-day basis. After some consideration the house consented to these terms and shipped on the goods.

Thus I became sole owner of a hardware business carrying a stock of nearly $9,000 and with the best of prospects for increased business. This last I was thoroughly sure of. There were only two other hardware stores in town, and it was a large enough place to carry three stores nicely.

I realized from the first that I had my work cut out for me. After much figuring and refiguring and exhaustive computation from every angle it became clear to me that in order to make the business go on a paying basis, it would be necessary to turn the stock four times a year. This meant a turnover of over $40,000 the first year. Burton's turnover, as far as I could make out from the books, had been about $13,000. I began to see that I had a contract on my hands.

I figured it this way. My monthly expenses, allowing a salary of $25 a week for myself—I was determined to start right—would run over $450 a month. I was paying $60 a month rent and there were two clerks and a boy on the staff. To pay off the goods I had purchased on credit in the time specified meant that I must lay aside $300 a month for that purpose plus interest. Then, if I were going to turn my stock four times in the year—and I reckoned that I should—it would mean replenishing the stock each month to the extent roughly speaking of $3,000.

It figured out this way. I would have to have sales each month of $3,750 or thereabouts to make expenses. To make a profit I would have to do still better than that.

Of course, my sales did not run that high the first year and I managed somehow or other to get through. But I started out fully confident that I would be able to bring the business up to the high standard I had set up.

(To be continued in next issue.)

ELECTRIC ADVERTISING.

An admirable, ever-ready and forceful medium whereby the merchant can advertise direct to all his prospective customers, is the electric-lighted show window, says a writer in the Journal of Electricity. It talks straight to the wants of the people. It does more than the printed ad. It holds the article out to you—but out of your reach. That is what starts the desire you never knew you had.

Therefore, it is the profit-pulling power of this very show window that gives value to the prominent corner. The merchant prospers to the degree in which he makes this silent salesman work, and his success is proportional to his attracting the attention and interest of every passer-by, and in impressing the value of the offerings on every passible prospect who comes within range of his window.

The big retail corporations, operating chains of cigar, notion, drug and liquor stores, employ experts who do nothing but appraise the value of store and window locations. These experts are sent to look at a certain space; they count the passers-by, note what class of people they are, estimate their buying power. This investigation does not stop at dusk, but continues till midnight.

The proprietors want to know the after-dark value of the display windows.

The system that these big corporations follow should be copied by every retail merchant. Window lighting

Letters to the Editor

These columns are open to contributions upon any topic of interest to the trade, it being understood that the views expressed are those of the contributors, and do not necessarily imply editorial indorsement. Names of contributors will be withheld if desired, but name of writer must accompany correspondence as an evidence of good faith.

FROM A PAST PRESIDENT OF O. R. H. & S. D. A.

Hardware and Metal, Toronto:

Gentlemen,—You are to be congratulated on the comprehensive report given in your paper of last week of the meeting of Retail Merchants' Association at Moose Jaw. Every retail merchant should read it, as I am sure he cannot help but be benefited in so doing. Personally I like the way they do things out there, and our friends in Ontario can sit up and take notice. Their deliberations showed no inclinations to infringe on the rights of others, but merely from a business view-point, looking after the interests of the retail dealer; about time we awoke from our slumbers. I congratulate you on your enterprise in giving so full and complete report for the benefit of your readers.

M. S. MADOLE.

A SUGGESTION FOR EXHIBITION AND CONVENTION.

Editor Hardware and Metal:

Dear Sir,—It is indeed regrettable that such a lack of interest was taken by retailers in the magnificent display of hardware at the Ottawa convention. It is true that the exhibition was held at a considerable distance from the centre of the business and hotel district, and this may account to some extent for the poor attendance of retailers at the exhibition.

Unless manufacturers get the support of the retail dealers there is no incentive for the former to spend such enormous sums of money to educate the retail trade. Retailers should have taken more trouble to look at and examine the products of manufacturers.

I would suggest that a new plan such as the following be considered: About 80% of all dealers visit Toronto exhibition. Why cannot the hardware exhibition and convention be held at fair time? Hardware exhibits could no doubt be placed in one building instead of scattered around as under the present system. If the management of the fair won't take the matter in hand, look around for another building. I think that at least 60% of the exhibitors at Ottawa are regular exhibitors at Toronto exhibition. Why not do away with one part of expense and combine two shows in one? The public could be better looked after. Single fare rates would be in effect. No cold weather or doctor's bills. Large numbers of retailers would attend. I think the suggestion could be considered by the executives of both associations.

IMPORTANT CUSTOMS REGULATIONS.

Editor Hardware and Metal, Toronto.

Dear Sir,—It appears that very few Canadian firms pay attention to Schedule C, article 1,209, of the Customs regulations, which reads:—

"Any goods—(a) which, if sold, would be forfeited under the provisions of Part VII of the Criminal Code, or,

"(b) manufactured in any foreign state or country which bear any name or trade mark which is or purports to be the name or trade mark of any manufacturer, dealer or trader in the United Kingdom or in Canada, unless such name or trade mark is accompanied by a definite indication of the foreign state or country in which the goods were made or produced;

"Provided, that for the purposes of this item, if there is on any goods a name which is identical with or a colorable imitation of the name of a place in the United Kingdom or in Canada, such name unless it is accompanied by the name of the state or country in which it is situate, shall, unless the Minister decides that the attaching of such name is not calculated to deceive (of which matter the Minister shall be the sole judge), be treated as if it was the name of a place in the United Kingdom or in Canada."

This would mean that any Canadian merchant ordering goods in a foreign country marked with his name or trade mark must have the name of the country also marked on the goods, and on the packages if the name is marked on the packages. If the goods are made in the United States they must bear the mark of the U. S. A.; if made in Germany they must bear the name Germany.

It appears that this law has not been in force for many years, but has been resurrected lately and is now being followed up by the Customs authorities, so we draw your readers' attention to see, whenever they order goods in a foreign country with their names or marks, that the country of origin is also marked on the goods.

MANUFACTURERS' AGENT.

HARDWARE LETTER BOX

Blue Stone.

J. L. Demers, Thetford Mines, Que.—"Kindly advise me who manufacturers and handles blue stone for liquid battery purposes?" Consolidated Mining & Smelting Co., Trail, B.C., or any of the wholesale druggists.—Ed.

Carpet Looms.

Geo. S. Parker, Rainy River, Ont.—"Can you give me address of firm manufacturing carpet looms?" Crompton Knowles Loom Works, Worcester, Mass. —Ed.

Hart Emery Wheels.

Dan Shannon, Marmora, Ont.—"Will you please advise me name of manufacturer of Hart Emery Wheels?" Canadian Hart Wheels, Ltd. Hamilton.—Ed.

Steel Sash.

Roy Andrews, Norwood, Ont. "Please let me know who manufactures steel window sash?" Steel & Radiation, Ltd., Toronto; A. B. Ormsby Co., Ltd., Toronto.—Ed.

WANT FURNACE CATALOGUES.

Charlebois & Edwards, 834 Jasper St. E., Edmonton, Alta., have written Hardware and Metal stating that they would like to receive from manufacturers catalogues and prices on hot air furnaces.

CONTINUED NEXT WEEK.

The problem for sheet metal workers, commenced in last week's issue of Hardware and Metal, will be concluded in next week's issue, instead of this issue, as previously announced.

IN THE NAME OF ROTTEN BUYING, WHY?

Reprinted from Hardware Age

Editor Hardware Age:—

I have been selling hardware for the past twenty years. Have made the "water tank" town and the big centres and when I was asked recently what is the greatest evil in the trade, I knew the answer. It is because the trade as a whole don't read. I know a message in Hardware Age won't reach many of these "dead ones," but it will land on a few, and I hope you will publish the following.

With best wishes for your continued success, I am,

Very truly yours,

F. C. K.

WHAT earthly chance has that buyer to sell his purchase at a reasonable profit in competition with a close, sharp buyer, a man who reads, who knows goods and their market value?

He has no better chance than the donkey has to fly.

Then what about goods going out of style, or a better article being made at a lower figure? How will a buyer know what changes are taking place if he does not read?

Does he wait for his fairy godmother or a little bird to whisper in his ear?

Will he sit tight until I or some other traveling man comes along?

This may be all right in the largest centres, but how about the fellow in the small town?

Now, please tell me, how in the name of rotten buying does he find out?

I'll tell you how.

His customer finally tells him that his competitor has a later style, has something better at a lower figure, and Mr. Buyer you can keep your old style goods bought at a higher figure, or sell it now at a big reduction. Take your choice, and let me say right here you would not have been caught with high-priced goods or merchandise antedated by better, quicker selling articles if you would read your trade paper, and market reports carefully.

You do not read, no we know you don't, so does every seller on the road know you don't read. You are the easy mark, your store is the dumping ground, which in the end means you will be dumped. The sheriff's flag tells the final story. Your creditor, jobber or manufacturer sheds tears, but he knows in his heart he has made a profit off you, because he charged extra for every dollar's worth of goods he sold you, as an insurance against a possible loss on the date of your failure.

I always feel sorry for the business man who says he cannot find time to read his trade paper. I feel at once that I am talking to a man who is not progressing, a man who is permitting his business to stand still or slip backward.

What chance has a business to grow when managed by a man who cannot find time to read? Prices change, styles change, methods change and competition changes. A competent manager must know these changes instantly, at least as soon as his competitor does, or he finds himself at a hopeless disadvantage.

Prices are sliding up and down constantly. Goods well bought are half sold. How is a buyer to know whether he has paid too much or too little for an article, and how does he feel when de discovers that he has been flim-flammed into paying more money for an article than he should? I know and you know that he has either bought in the wrong market, or that the seller has got the best of him, and he blames the seller. Is the seller to blame? No, not by a jugful. His business is to sell and get the best price possible. He found a buyer who did not read—who was not posted—who was easy: that's the answer.

Current News of the Hardware Trade

Personals.

J. G. Lewis, vice-president, Lewis Brothers, Montreal, has returned from a three months' trip spent in Europe.

The following representatives were callers on the Montreal hardware trade this week: P. G. Underwood, Moore Push Pin Company, Philadelphia, Pa.; W. Bruce Morrow, manufacturers' agent, Toronto; A. G. Bowman, Russell & Erwin Mfg. Co., New Britain.

James Reid, who has been connected with the firm of Caverhill, Learmont for the past 40 years, and is known throughout the trade is at present confined to his home through sickness. It is not thought that there is anything serious the matter with Mr. Reid and his many friends wish him a speedy recovery.

George Scott, of the Northern Hardware Company, left Montreal on Saturday night last for home. Mr. Scott attended the convention at Ottawa and from there went east where he was married. After spending their honeymoon in the West Indies, Mr. and Mrs. Scott returned to Montreal, where they spent a few days before making the trip to the far West.

Business Changes.

Laird, Sask.—C. C. Ens' hardware has been sold to Mr. Morden

Harriston, Ont.—A. & J. Meiklejohn have sold out to Thos. Young.

Toronto, Ont.—Woodward Hardware Co. has sold out to Thos. Muir.

Shallow Lake, Ont.—Thos. Young, hardware, has moved to Harriston.

Toronto, Ont.—Muir Bros., hardware and tinsmiths, have dissolved partnership.

Dresden, Ont.—Wells-Wells have dissolved partnership. Russell A. Wells continuing.

Otterville, Ont. — A. Wase has purchased the tinsmithing business from J. B. Addison.

Edmonton, Alta.—S. J. McClean has succeeded to the business of the Enterprise Hardware Co.

Galt, Ont.—J. P. Hamill and Jackson Moore have disposed of their hardware business to Robert Witherspoon.

Alsask, Sask.—The hardware business of Acheson & Hoskins will not be conducted by the Acheson Hardware Co.

Davidson, Sask.—It is reported that Calloway and Calloway, dealers in hardware, are selling out to the Pioneer Hardware Co.

New Firms.

Winnipeg, Man.—J. Berthnal and A. Gordon have commenced business at 565 Selkirk Ave.

Wallaceburg, Ont.—W. H. Westman, formerly of Westman Bros., Chatham, is opening a hardware store here.

Chatham, Ont.—Albert Allison is opening a hardware store in the western half of the premises formerly occupied by Stephens & Douglas. General hardware, paints, oils and similar lines will be carried. Mr. Stephens, who recently sold out his general hardware stock to his former partner, D. H. Douglas, will continue to handle heavy hardware.

Fire Losses.

Timmins, Ont. — The tinshop of A. Brazean was destroyed by fire.

St. John's, Nfld.—The St. John's Nail Factory was badly damaged by fire.

Saskatoon, Sask. — The Westhare Hardware Co. store and stock has been destroyed by fire.

Winnipeg, Man.—The Chamberlain Metal Weatherstrip Co. Agency has been burned out.

Winnipeg, Man.—Moncrieff & Endress, dealers in hardware specialties have been burned out.

Harriston, Ont.—The buildings of the Harriston Oil Company, owned by McColl Bros., of Toronto, were destroyed by fire.

Obituary.

Oil Springs, Ont.—James Marshall, formerly engaged in the tinsmithing and hardware business here and at Watford, passed away recently at Calgary, Alta. The remains were interred in Oil Springs cemetery.

The sudden demise of John Weir and his son William Moore Weir, who succumbed to pneumonia within two days of each other, removes two of the best known residents in York village. The late Mr. Weir conducted a general store in the village of York for almost half a century.

Ontario Incorporations.

The Luxifer Prism Co., capitalized at $90,000; head office: Toronto.

James Devonshire, Ltd., capitalized at $40,000; head office: Toronto, to manufacture and deal in bricks, tiles, earthenware, etc.

Rotary Amalgamators, Ltd., capitalized at $40,000; head office, Toronto.

Kel-Kee Cyclecar Co., Ltd., capitalized at $40,000, with head office at Tor, onto, to manufacture, assemble and deal in power propelled vehicles and parts thereof.

Industrial.

Medicine Hat, Alta.—The Alberta Rolling Mills are installing machinery in a new plant erected this year, and will be in a position to supply the trade with nuts and bolts before very long.

Catalogues and Booklets

Farm and Garden Implements.

S. L. Allen & Co., Philadelphia, U.S. A., have issued a 72-page catalogue featuring an extensive line of farm and garden implements including combined seeders and wheel hoes, cultivators, hand seeders, hand garden tools, sugar beet tools, etc. Copies will be mailed to the trade on request.

Everything on Wheels.

The Montreal Sales Co., 61 St. Sulpice Street, Montreal, have just published a new spring and summer edition of their catalogue, "Everything on Wheels." This catalogue, which has been brought thoroughly up-to-date, shows a large variety of baby carriages, each line being well illustrated. A number of other lines are also shown, among them being sulkys, swings, folding chairs, garden seats, croquet sets, toy wheelbarrows and express wagons, roller skates, and velocipedes. Copies of this catalogue will be mailed to those interested.

Metal Display Sign.

The Iver Johnson's Arms & Cycle Works of Fitchburg, Mass., have prepared a handsome lithographed metal sign, which is being distributed free of charge and carriage prepaid, to their bicycle agents. The lettering is in deep red upon a background of vermilion, with the bicycle subject worked up in steel gray. The sign is twenty inches by nine and one-half inches, and is provided with a silk cord so that it can be readily suspended at any point of vantage.

APPOINTED CANADIAN REPRESENTATIVE.

An announcement has recently been made of the appointment of P. A. Cheevers as Canadian representative of the American Rolling Mills Co., Middleton, Ohio, with headquarters at Toronto.

Mr. Cheevers, who takes over his new duties on May 1, has a connection of many years' standing with the sheet metal trades. Mr. Cheevers was born at Brantford, Ont., and commenced his apprenticeship at the age of 16, with Howie & Feely, of that city. After serving his apprenticeship, and studying the tin and sheet metal trade in all its branches, he joined the staff of H. J. Boyd, London, Ont., as foreman of the sheet metal work department of the business. Leaving London some time later, Mr. Cheevers moved to Petrolia to take charge of tin and sheet metal work department of E. & S. Pollard's business.

P. A. CHEEVERS

After remaining three years in Petrolia, Mr. Cheevers decided to go into business for himself, and purchased a business at Chatham, which he conducted successfully for some time. He sold his Chatham business to Peter Cunningham, and joined the sales-staff of the Metal Shingle and Siding Co., Preston, as Western Ontario representative, with headquarters in London, where the company had a branch warehouse and office, of which Mr. Cheevers had charge.

After eight years with the above firm, Mr. Cheevers resigned in order to take over the management of the Metal Shingle Co., of Detroit, with headquarters in the latter city.

Mr. Cheevers had completed three years' service with the latter firm, when he resigned to become Canadian representative of the American Rolling Mills Co.

Mr. Cheevers has had many years' training in the tin and sheet metal trades, and is thoroughly versed in all branches of the trade. He has also found time to engage in various sports, and for a number of years was an enthusiastic football and lacrosse player.

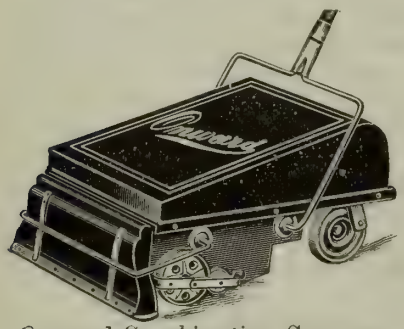
CANADIAN PIG IRON IN UNITED STATES.

A RECENT issue of the Iron Age makes the following suggestive comments relative to the export and disposal of Canadian made pig iron in the United States:

The new cross currents which the reductions in iron and steel tariffs will introduce in American foreign trade statistics are illustrated by the impending increase in pig iron imports from Canada. Should the shipments of Dominion Iron & Steel Company pig iron to the United States this year be only the 20,000 tons already sold to New England and Delaware River foundries, the 1914 total will be several times the average import from Canada in recent years. At 1976 tons in 1908, with slight increases in the interim, the total being 4609 tons in 1913, Canadian pig iron shipments have been generally reckoned as principally electrolytic ferrosilicon produced at Welland. The shipment of Nova Scotia pig iron into the United States is especially noteworthy in view of the heavy exports of pig iron from this side of the line into Canada, chiefly to Ontario, these reaching 193,396 tons in 1913 and being at a maximum of 208,581 tons in 1912, as against only 44,758 tons in 1909. The large figures for 1912 and 1913 tell of the boom across the border that has now given way to marked recession.

That foundry pig iron shipments should be going in both directions between Canada and the United States, as at present, is not only a result of the new tariff, but a phenomenon of the far-extended territorial contracts of the two countries. Even with Canada's duty of $2.50 on pig iron, Buffalo district furnaces command a trade of 200,000 tons there as against the Nova Scotia furnaces now invading our Eastern seaboard.

It should not be overlooked that the appearance of Dominion pig iron in our Eastern markets is really one of the signals of the distress under which Canadian industries are laboring lately, in common with our own. Normally the Dominion Iron & Steel Company's pig iron is all needed by its steel works and it is a most exceptional condition that prompts the marketing by the company of anything but semi-finished or finished steel.



THE JAMES STEWART MFG. CO. HOCKEY TEAM, Woodstock, Ont.
Winners in the Woodstock Manufacturers' League, 1913-14.
The E. W. Nesbitt Trophy.
Back Row.—E. Izzard (Secretary), Sec.-Treas.; Thos. C. Stewart (Director), Hon. President; Wm. McLaughlan (Foundry Foreman), Manager.; Geo. Childs, Sr. (Superintendent), President. Second Row.—Wm. New Goods Offered Canadian Hardwaremen

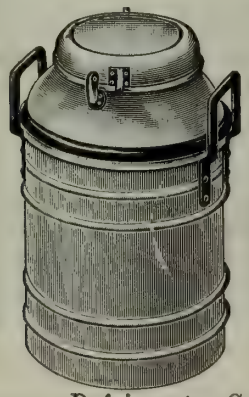
A COMBINATION SWEEPER AND CLEANER.

Onward Mfg. Co., Berlin, Ont., is offering the trade the "Onward" combination vacuum cleaner and carpet sweeper here illustrated. Several special

Onward Combination Sweeper.



features are claimed for the sweeper, including the protruding nozzle which makes cleaning possible close to the walls and it is claimed, materially decreases the labor of cleaning by covering more space in a simple operation.

It is said that the "Onward" can be quickly and easily changed into a plain vacuum cleaner on four wheels by removing the brush. The brush can be thrown in or out of action by the simple operation of a lever.

The machines are finished in rich mahogany, striped with gold, nickel trimming, ball bearing.

STURGES REFRIGERATOR CAN.

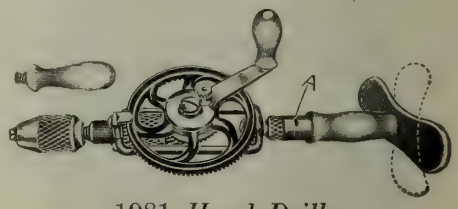
Sturges & Burn Mfg. Co., Chicago, Ill., are offering the trade the new milk can here illustrated. The cans which are

Sturges Refrigerator Can.

made in two sizes, 5 and 10 gallons, are for shipping milk or cream long distances, or delivering from the farm to the factory. It is claimed that the can is the result of many months of careful study and experiment in testing various methods of construction and many kinds of insulating material and shows splendid results in protecting contents against weather conditions. The cover is insulated, close-fitting, firmly locks in place, and may be secured either with a padlock or seal. A parafined paper cap, used beneath the cover, seals the can and insures against contamination from the outside.

ERN JUNIOR RAZOR.

A new razor has been placed on the market by the Ern Razor Co., of Montreal. The razor here illustrated, named the Ern Junior, after its inventor, is said to be forged by a new process which permits the blade to be subjected, in one heating, to four times more hammer treatment than is possible by the old drop forging process. It is claimed by

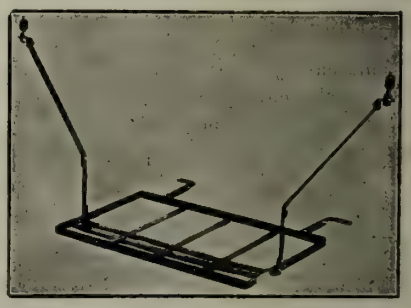


Ern Jr. Razor.

the manufacturers that, not being subjected to repeated heating, the carbon in the steel is not destroyed and that the blade having been practically hand forged by about 25 hammer blows, is of more uniform quality, with a greater power to hold edge than can be obtained by the old process.

NEW HAND DRILL.

Millers Falls Co., Millers Falls, Mass., are offering the trade a new hand-drill, No. 1981 here illustrated. The drill is fitted with a hollow end handle, with detachable breast plate, adjustable to different positions, and with receptacle for holding twist drills up to the largest size within the capacity of the chuck, detached by loosening a knurled check nut and pressing on a plunger, and shaped so tool may be used as a breast drill. Another feature is the instantaneously changed speed 1½ to 1 and 4 to 1, operated by raising and turning to the right or left the cap to a small boss on the crank handle. This is said to be a convenience in cramped places or in doing delicate work. Pinions and shifting device are of steel and enclosed



1981 *Hand Drill.*

for protection. Cut gears with adjustable friction roll to equalize bearings. The chuck is of star pattern with three jaws opening with springs that are protected. The length without handle is 10 inches, with handle 15¼ inches. Weight per dozen, 42¾ lbs.

FOLDING LUGGAGE CARRIER.

The Richards, Wilcox Canadian Co., London, are offering the trade a new luggage carrier, made especially for Ford cars. The carrier No. 344 is made entirely of steel and finished in black baked enamel. The arms of rack are attached to "gooseneck" rod, on which top rests when down. The illustration shows the rack open for trunks. When it is desired to carry suitcases or smaller packages, the back of rack may be raised. When not in use it is claimed

Folding Luggage Carrier.

that the rack may be folded against back of car, and is out of the way entirely.

W. H. Johns, hardware merchant, Southampton, has been appointed treasurer of the Southampton board of trade.

Weekly Report on Market Conditions

Statements From Buying Centres on Prices and the Trend of Demand—Full Reports Dealing with Hardware, Metal and Stove Lines.

THE MARKETS AT A GLANCE.

A very fair volume of Spring business is passing at present. The general situation in the metal market has not shown much change, although conditions are gradually improving. The tariff changes are being discussed by the metal trades and there appears to be a diversion of opinion as to whether unfairness has been shown or not. The paint trade is busy. Very few price changes have occurred during the past week.

Linseed oil is exhibiting an upward trend. Price-cutting is quite evident on some lines of hardware.

MONTREAL.

ONTREAL, April 7. — Owing to the civic elections, which took place yesterday, the market this week has been in more or less of a confused state, and so far as local business is concerned there has been little of it. Dealers through the Maritime Provinces are still buying freely, and the amount of business which is passing at present, although not up to the previous week, is considered quite satisfactory. Owing to the continued cold weather, there has been a tendency on the part of local dealers to hold off from buying as long as possible, and until the temperature creeps up a little it is not thought by the local jobbers that there will be any great change in local conditions.

There has been quite a lot of talk in local circles this morning as to the outcome of the new tariff, which has added duty on wire rods. It is now a question how this will reflect on the present quotations, but it is a little early to predict anything as yet. Another week or so ought to show us something in this respect.

Lock Sets.

Montreal jobbers report that Canadian lock manufacturers have not reduced prices, consequently there has been no changes in jobbers' quotations on inside sets.

Nails.

Wire nails are still being quoted at $2.20 base, and are in fair demand.

House-cleaning Goods.

There has been considerable business done this spring in all lines used for house-cleaning, and apparently the dealers throughout the country are meeting with great demand for these lines, as their orders are for good-sized quantities.

Brushes.

There still continues a very heavy demand from all centres for brushes of all descriptions. The situation is quite as firm as it has been reported for the last few weeks, and, as the market for rice root is still unchanged, there is little hope for any easing off in present conditions.

Maple Tools.

The sugaring season is in full swing throughout this province, and there is a very heavy movement of sap spouts, sap bits, pails, etc. It is reported by a great many that this year will establish a record in this industry, as the sap is running quite freely all through the country. By the demand for the goods used in this industry these claims seem to be about right, as there are more orders coming in at present than ever before.

Driving Tools.

There is nothing new to report in this market, except that lumbermen are preparing for the driving season, which ought to open up pretty soon now. It is said that there has been a great deal of lumber cut this year, and that driving operations will be carried on to a very large extent all through the summer. The demand at present is in keeping with this report. Boot calks, cant hooks, coil chain and so forth are among the leaders.

Builders' Hardware.

Although there has not been any great increase in the amount of business done during the past week, it has certainly shown a slight improvement from previous weeks. Locally, there are quite a number of jobs being carried on at present, mostly houses, and it is the opinion of a good many that there will be quite a few of these jobs ready in a few weeks' time. This will naturally stimulate this business greatly from local buyers.

Washing Machines, Churns, Wringers.

There is quite a demand for all these articles, and they are being shipped to all parts of the surrounding country. The eastern provinces are drawing regularly on this market, and shipments are going forward almost daily. There is quite a spirited demand for washing machines.

Egg Crates.

Now that the hens have started to lay regularly, the demand for egg crates has taken quite a jump, and there are numbers of them being sent forward every day. It might be noted here that there were more eggs received in this market last week than ever before for the same period. There has naturally been an increase in the demand for crates.

Roofing.

At the present time there is not too much business passing in this market, although there was considerable roofing shipped some weeks ago. It is the opinion locally that this business will open up again in about two weeks' time.

Metals.

In the metal markets during the past week there has been little or no change as regards demand, and the amount of business passing at present is quite limited. As there is not the building going on at present that there was one year ago, this has naturally affected the demand here. There is, however, always a steady demand for certain quantities all the year round.

Tin.

This market has taken on quite a weak feeling, and there has been a reduction of ½ cent this week. The price now quoted is 43½ to 44 cents per pound, and the market is dull at these figures, with only a limited business passing.

Spelter.

No change is noted in this market over last week, and the quotation of $6.00-$6.25 given then remains. Business is limited at this quotation.

Lead.

There has been no change in this market during the week, and the price given then of $5.25 to $5.50 is still quoted. The amount of business passing at present is only considered fair, and the market remains in much the same condition as last week.

Report from New York is to the effect that trust there is holding the price down for reasons of their own.

Copper.

There has been no change in the situation from one week ago, when we reported a weak market, with only a fair amount of business passing. The price given then of $16.50 still remains, and the amount of business passing this week is limited.

Antimony.

The market remains weak, with only a small amount of business passing under the same quotation as given last week of $9.

Iron.

The market here is considered to be very weak, and the amount of business passing at present is light, with the quotation of $19 per hundred given.

Stoves and Heating.

This past week has seen quite a movement in gas stoves, and the business from now on is expected to show considerable increase, as there are always a number of these stoves shipped out around the 1st of May. Other lines, though, are said to be very quiet. Collections are only fair.

TORONTO.

TORONTO, April 8.—The chief topics of conversation in the Toronto metal markets this week are the tariff changes affecting the metal trades. Elsewhere in this issue full particulars regarding the changes are given. A large number of nail manufacturers are greatly opposed to the duty imposed on wire rods, and claim that it is a very unfair advantage for ten of the larger firms. Trade in the metal market is slowly recovering and a slight improvement is noticed in the size of the orders coming in. There is still room for greater improvement and metal merchants are of the opinion that conditions will continue to steadily improve.

Metal Changes.

Tin has shown another decline this week, a drop of 1 cent. per pound having taken place. The lower quotations have stimulated buying to some extent. Local quotations range from 40c. to 43c. per lb.

Copper remains unchanged and firm, although business in this line is not brisk. Lead has advanced 5 cents per 100 pounds and quotations range from $5.20 to $5.50 per 100 pounds. Pig iron and spelter have shown no change during the week.

Following prices are being quoted on other metals, ingot aluminum 99 per cent. pure; wire solder, 25c. to 27c. per lb.; ingot brass, red, 14c. to 16c. lb.; ingot brass, yellow, 13c. to 15c. lb.; electrotypers' solder, 30c. lb.; wiping solder, 25c. to 27c. lb.; pattern aluminum, 23c. to 24c. lb.; brazing metal, 26c. lb.

Wire Nails.

Much speculation exists as to what effect the tariff changes will have on the nail market. Toronto dealers think that an advance will take place. Toronto quotations have been very low lately. Considerable price-cutting has been in evidence. The ruling quotation has been and is at the time of writing, $2.10 per keg base, although some lower prices have been in evidence. Several Toronto firms believe that the imposition of a duty on wire rods will have a tendency to advance quotations in the finished product.

Lock Sets.

As stated last week, an exceedingly low price is being quoted in some lines of inside lock sets. Inside sets with one-piece metal knobs are being sold at $3.75 per dozen sets. This price has been in effect for the past two weeks, but is liable to be withdrawn at any time. The exceedingly low quotations have been caused by close competition in this line.

Screws, Etc.

The following quotations are still holding good on wood screws:

Flat Head, Bright....85-10-7½-10-10%
Round Head, Bright..80-10-7½-10-10%
Flat Head, Brass.....75-10-7½-10%
Round Head, Brass...70-10-7½-10%
Oval Head, Bright....80-10-7½-10-10%

Rope Twine.

No changes have taken place in rope or twine quotations. Business is improving steadily. Reports indicate that a Scotch firm is endeavoring to secure a foothold in the Canadian market and that a large consignment of twine is being sent in. Toronto quotations are as follows:

Best Pure Manilla .....15c lb base.
British Manilla .....11c lb. base.
African Hemp .....11c lb. base.
Sisal Rope .....10½c base.
Lath Yarn Single ..... 9¾c lb.
Lath Yarn Double .....10¼c lb.

Other lines are shown in Current Market Quotations.

Binder twine prices are: 650 ft. twine—13½c lb:; 600-ft. twine, 11c lb.; 550-ft. twine, 9¾c lb.; 500-ft. twine, 9¼c lb.; ⅛c per lb. allowance on 5 tons and over; ¼c lb. allowance on 10 tons and over; delivery allowed on 300 lbs. and over.

Building Trades.

The outlook for building in Toronto is Toronto is daily growing brighter and it is believed that the demand for building materials will reach a high level this year.

Cement is moving rapidly; quotations remain the same as shown in Current Market Quotations.

Stoves, Furnaces, Etc.

Business in stoves and furnaces is fair but there is still room for improvement. Gas ranges are in fairly good demand and booking for future is all that can be desired under present conditions. There is a heavy demand for oil and gasoline stoves.

Washing Machines, Wringers, Etc.

With the approach of the spring cleaning season there appears to be a slightly better demand for washing machines, wringers, etc.

Wringers are quoted at 20 per cent. off the list prices now in effect. Washing machines are still quoted at 20 per cent. off. Mangles, with three rolls 5 in. x 24 in., hinged table board, stand with caster wheels attached, are quoted at $14.25 each. Table mangles, with iron frame and two rollers, are quoted at $6.60 each.

TORONTO QUOTATIONS ON METALS.

Prices are gauged according to quantity purchased.

Electrotypers' Solder	30c	lb.
Brazing Metal	26c	lb.
Ingot Brass, red	14 to 16c	lb.
Ingot Brass, yellow	13 to 15c	lb.
Wire Solder	25 to 27c	lb.
Wiping Solder	25 to 27c	lb.
½ and ½ solder	25 to 27c	lb.
Pattern Aluminum	23 to 24c	lb.
Ingot Aluminum 99% pure	19 to 20c	lb.
Spelter	$5.35 to $5.65	per 100 lbs.
Copper	16½ to 17¼c	lb.
Tin	41 to 43c	lb.
Lead	$5.20 to $5.50	
Tinkers' Bar Solder	28 to 29c	lb.

WESTERN FREIGHT RATE JUDGMENT.

(Continued from page 47.)

ernment. The Winnipeg Board of Trade, however, on November 14, 1911, passed a resolution alleging that the tolls of western lines were both unreasonable and discriminatory, and forwarded it to the Hon. Frank Cochrane.

This was referred to the Board of Railway Commissioners on December 4, 1911. On January 8, 1912, the late Chief Commissioner, the Hon. J. P. Mabee, and his fellow-commissioners determined that a full inquiry was necessary as to the reasonableness of the freight tolls, and placed upon the railways the onus of justifying the discrimination alleged to exist. The whole progress of the inquiry involved sixty-two hearings, taking up 100 days, at every important point from Port Arthur to Victoria, besides Montreal, Toronto and Ottawa; seventy-two witnesses were examined; 158 exhibits containing 4,870 pages were filed; and 6,148 pages of evidence were taken down.

A VOTING CONTEST.

A scheme which has created unusual interest about the city of St. John, N.B., is being helped in its promotion by a north end hardware dealer, Alexander M. Rowan, in whose windows in Main street, are displayed a large five passenger-touring car, 1914 model, a $400 piano, and a variety of other prizes including cut glass, silver, china, etc. Mr. Rowan is one of five merchants in St. John, who have begun a voting contest for the increase of sales. It opened on Wednesday last. The idea was featured by previous announcements through the press exciting interest before it was launched at all, by the mere mention of the possibilities of getting an auto, piano, or other big prize, but with no means hinted as the manner of acquiring the same. Then a big full-page display advertisement was carried in the local press, giving full details of the contest.

The winner of the first prize, that is the contestant having the greatest number of votes at the close of the contest, will have his choice of a five-passenger touring car and a two-passenger runabout. The second prize to be given is a $400 grand piano, on November 1. Another piano is to be awarded on December 1, and still a third on January 1, of 1915. These prizes are for the greatest number of votes secured, and it is said many customers have been added to the accounts of Mr. Rowan and the others interested, and are in addition to the weekly prizes given to those getting the largest number of votes, in the week. Votes are given to every purchaser in the store. It is the biggest scheme of sales-getting attempted in St. John in recent years and the outcome will be awaited with interest.

ELECERIC ADVERTISING.

(Continued from page 49.)

should not be left to chance—it should be appraised and its value known.

A window display is an advertisement—but instead of telling about the merchant's wares, it shows the actual goods. And every merchant knows the difference; if people did not want to see the goods, if they would be content with a picture and a price, all retail stores would soon give way before the mail order idea.

We all know how light attracts humans no less than moths. And in the evening our eyes are ready for diversion, our minds are open to impression. When the day's work is done, the merchant's "circulation" is in its most receptive state, and the cost of reaching these biggest opportunities is simply the cost of window illumination. Without that light the cleverest, most appealing display of goods is wasted after sundown.

GIVE THE WORKER A CHANCE.

If a man's work be of a special nature, work foreign to that of his associates yet valuable as an adjunct to theirs, it would seem to be the part of reason and wisdom to allow this man to have some latitude in the selection of conditions under which he would prefer to work. The demand upon him ought not to be that he do his work at a certain time and in a certain place, but that he deliver at a given time and place and of a quality and quantity satisfactory to his employer, the work he has undertaken to do.

We believe that the most brilliant and satisfactory progress industry has known will come when the worker in routine lines is paid according to his intelligence, skill and efficiency, and the worker in special lines is required simply to "deliver the goods," with no unreasonable restrictions as to his methods either of production or delivery. —Valve World.

Street scene taken in New York after recent heavy snowstorm. Note the horse-cars which were in operation at that time, but which have since been discontinued. Picture was taken by the American Wringer Co.

Current News in the Paint Trade

WINDOW DISPLAY OFFER.

The Boston Varnish Co. are offering $100 in cash prizes for the best Kyanize window displays. The prizes are to be divided as follows:

Class A.—(Towns and cities of over 5,000 population).

For best window display.....	$25
For second best window display...	$15
For third best window display	$10

Class B.—(Towns under 5,000 population).

For best window display	$25
For second best display	$15
For third best display	$10

Photographs of window displays to compete for the above prizes should reach the manufacturers not later than May 15.

SHERWIN-WILLIAMS COMPETITION.

The Sherwin-Williams of Canada, Ltd., Montreal, are conducting a new prosperity window trimming competition, which closes June 20. Prizes are offered for two classes of displays, one for a general display of S.-W. Products and one for best S.-W. Varnish Display. Competitors may enter for both general and varnish window prizes. The prizes are as follows:

For Best General Window S.-W. Products.

1st prize	$50
2nd prize	25
3rd prize	15
4th prize	10
5th prize	5
6th to 15th prizes .....each	2

For Best S.-W. Varnish Window.

1st prize	$25
2nd prize	15
3rd prize	5

Judges of the competition will be representatives from Hardware and Metal, the Hardware Stove and Paint Journal, and one of the officials of the Sherwin-Williams Co. Announcements of prize-winners will be made in the hardware papers as early in July as possible.

BOOSTING THE CAMPAIGN.

The April issue of Stephens' Paint News is devoted largely to boosting the "Clean Up and Paint Up" campaign. The movement is spreading rapidly into all parts of Canada and deserves the active support of all connected with the paint trade whether manufacturers, jobbers, retailers, or painters. Stephen's Paint News says: "By energy and careful attention to detail you can break the bogey of 'Hard Times' and make 1914 the biggest year in the history of Western Canada from the viewpoint of profits attained from individual effort and the resulting general satisfaction."

MARTIN-SENOUR CONTEST.

The Martin-Senour Co. are conducting a "Window Display" contest and a "Sales Stunt" contest.

The "Window Display" contest is to be judged by attention and interest-getting value in connecting up a store to Martin-Senour Advertising — "Clean Up and Paint Up" Week — "Spic and Span" week.

The conditions are:—

(1)—That the display be composed of Martin-Senour products and advertising matter. That the new spring window trim be used.

(2)—That photograph of display — mailed flat, and bearing the name of the firm and contestant's name—is received at Montreal not later than May 18th, 1914.

The winners to be announced in June. 1st prize, $15.00; 2nd prize, $10,00; 3rd prize, $5.00; and $2.00 each for the five next best.

The "Sales Stunt" contest is to be judged on the merits of its originality and uniqueness, as well as the paint and varnish selling value.

The conditions are:—

(1)—That Martin-Senour paints and varnishes be featured in the stunt, scheme, or idea carried out, during "Spic and Span" week.

(2)—That detailed description (and if necessary, photos) bearing the name of the firm and contestant be received at Montreal not later than May 18th, 1914.

The winners to be announced in June. 1st prize, $15.00; 2nd prize, $10,00; 3rd prize, $5.00.

THE LATE J. P. CONKLIN.

J. P. Conklin, a member of the firm of Sanderson, Pearcy & Co., Toronto, died on Apr. 4, after a week's illness of pneumonia. The deceased was one of the best known travelers in Ontario, having represented his firm in Northern and Eastern Ontario for the past thirty-four years. Mr. Conklin was 63 years of age. He was born in Amsterdam, N.Y., and came to Toronto 35 years ago.

As well as being a member of the Commercial Travelers' Association, he was connected with the Royal Arcanum Society, the Masonic Order and Dovercourt Presbyterian Church.

"CLEAN UP AND PAINT UP."

The April issue of Paint Salad in featuring the "Clean Up and Paint Up" movement says:

This is the slogan of a movement for homes and towns beautiful, to promote cleanliness, thrift, and civic pride—a movement which is gaining national importance.

Briefly stated, the "Clean Up and Paint Up" idea is to have every city and town set aside one week for a general public and private clean up; to establish the five-word slogan everywhere, and to create in the public mind a spirit of enthusiasm and a sense of intelligent team-work; to enlist the active co-operation of the town or city authorities in all departments — in fact, everybody, old and young, to be asked to lend a hand to clean up property, indoors and out, and help put every street, alley, backyard, and vacant lot in spic and span trim during "Clean Up and Paint Up Week."

Across the border this "Clean Up and Paint Up" campaign is sweeping the country like wildfire. Last year the movement accomplished a remarkable work in hundreds of towns and cities in the land of Uncle Sam. In St. Louis, Denver, Buffalo and Baltimore, enthusiastic clean up and paint up campaigns were carried on that resulted in tons of rubbish and waste matter being carted away to the dump, hundreds of dull and grimy buildings being brightened with a coat of paint, and many lawns and yards being cleaned, flower beds put in, and neighborhoods beautified. This year intensive clean up and paint up activity is sweeping the entire country.

Some of our Canadian towns and cities are also taking a hand in this good work. We are informed that St. John, N.B., Montreal, Que., Regina, Sask., and others have made arrangements to hold a "Clean Up and Paint Up Week." Still, there is great need of a systematic clean up in most every city and town throughout Canada. How about your own town? Take a look round, and you will surely see many streets, yards and open spaces that are littered with waste and rubbish, and therefore, unsightly and unsanitary. If you find these conditions out doors, ex-

(Continued on page 61.)

Easier and Quicker Sales

Everything in Nature follows the line of least resistance. The brook, with its many curves and turns, winds its way according to this law of Nature.

Martin-Senour 100% Pure Paint is the line of least resistance in paint selling—and after the first sale, the satisfaction received makes future sales a matter of order-taking.

Purity is the standard when buying White Lead, Zinc Oxide, Linseed Oil, or Turpentine, and purity is the standard of the great majority of people when buying paint.

It is easier—quicker—more profitable to sell 100% Pure Paint to pre-convinced buyers than to argue half an hour about the efficiency of a paint that is not 100% Pure.

Berry Brothers' Varnishes Bring Dealers Steady Profits — Pleased Customers — Bigger Business

EVERY hardware dealer who handles Berry Brothers' celebrated architectural varnishes is enjoying all these advantages. Every dealer who does not sell Berry Brothers' varnishes is missing the profitable business that would result from our splendid reputation among architects, house owners, builders and contractors, painters, decorators, and every one who uses or knows about varnishes.

56 years of careful, scientific manufacturing—56 years of steady, substantial growth—and a splendid reputation for quality of product and straightforward business dealings—these have assured the loyalty and prosperity of our dealers and the satisfaction of our dealers' customers.

Our advertising has made the name Berry Brothers almost a household word—it has thoroughly familiarized varnish users with Berry Brothers' products and the multitude of uses to which they may be put. More than that, our consistent publicity brings customers into the stores of our dealers and, besides directly increasing their business, makes it steady and certain.

Public Recognition of Berry Brothers' High Standing of Immense Benefit to our Dealers

Because of the enviable position that the Berry Brothers Company holds in the business world and its high standards of commercial integrity, it has been selected as a member of the Rice Leaders of the World Association. This is an honorary organization founded upon the highest principles of business, to develop business honor in America and the markets of the world, and to demonstrate to the public the high and worthy standing of its members.

Berry Brothers' membership in this organization means world-wide recognition of the high quality of its products. It represents a dealer-help of inestimable value. It means better business, bigger profits, and greater prestige for every Berry Brothers dealer.

A Varnish for Every Need

Our dealers can meet every demand that varnish customers may have. Berry Brothers' finishes are adapted to practically every use. Here are four of our principal products:

Liquid Granite—A wonderfully durable varnish for floors, linoleums, oilcloth, etc.

Luxeberry White Enamel—A white interior finishing—that stays white. Ideal for stairs, hallways, bathrooms, also for white furniture.

Luxeberry Spar (It's Waterproof)—For marine uses and all kinds of outdoor finishing exposed to the weather. Will not check, crack or turn white.

Luxeberry Wood Finish—For the finest rubbed (dull) or polished finish on interior woodwork.

If you are not now selling our products, our booklets will tell you more fully about Berry Brothers' Varnishes. We can show you how handling these finishes will mean better business and valued prestige to you. Write us at once regarding our dealer proposition.

WALKERVILLE, ONTARIO

Weekly Market Report---Paints

MONTREAL.

MONTREAL, April 7.—The situation locally is unchanged from one week ago, and business is still booming in every department. Immediate shipments are going forward in great quantities, and there are also many orders booked to go forward within the next couple or three weeks. The idea of a "clean up and paint up" week has gained favor in Montreal, and the Montreal Publicity Association has even gone so far as to appoint committees to look after the different branches of the campaign, which is to be held some time in May. This idea has gained much favor in the States, and from all appearances it looks as if this country would adopt the idea too.

Collections, taking everything into consideration, are fair.

White Lead.

The general conditions are unchanged from one week ago, and the amount of business passing at present is quite seasonable. The market is quite firm, and quotations are as follows:—Ton lots are quoted at $8.05, while less than a ton are quoted at $8.25, with open prices for quantity lots.

Linseed Oil.

The market has firmed up since last week, and prices have jumped up 2 cents. Even at the advance there is a very firm feeling in existence. Some of the local dealers are still selling at 60c for raw and 63 for boiled, but all others are quoting at an advance of 2 cents. Business is quite seasonable. The ruling quotations are:—

Raw—

1 to 4 barrels	62c per gal.
5 to 9 barrels	61c per gal.
10 to 25 barrels	60c per gal.

Boiled Oil—

1 to 4 barrels	65c per gal.
5 to 9 barrels	64c per gal.
10 to 25 barrels	63c per gal.

With open prices for carload lots.

Glass and Putty.

The demand for glass is still quite limited, and there is no great improvement looked for until after the first of next month. Prices remain unchanged, and are shown in "Current market quotations."

Putty is governed to a great extent by the sale of glass, and as that market is quiet, there is not much change looked for immediately here either.

Turpentine.

The market is considered to be quite firm at present, and some of the local firms are inclined to quote a little higher than shown below, although it is not general. The increase in any case is not more than ½ cent. The demand remains much the same as in previous weeks.

5 gallons	72½
Half-barrels	70½
1 barrel	67½
2-4 barrels	66½
5-10	62½

Gasoline.

There has been a decline in gasoline of ½ cent per gallon, and the following prices are quoted. Although this seems strange at this season of the year, when most people look for the market to firm up, the condition at present is just the opposite:—

Barrels, in wood	22½c gallon.
In steel and drums	20c „
Tank wagon (100 gals.)	19½c „

TORONTO.

TORONTO, April 8.—Business in the paint trade continues fairly brisk and paint jobbers and manufacturers appear to be well satisfied with the volume of business passing. A large number of building permits are daily being issued in Toronto and this gives rise to a feeling of optimism. The "Clean Up and Paint Up" movement is spreading, and considering that this is the first year the movement has existed to any extent in Canada, the results so far are very encouraging.

Linseed Oil.

While no change has yet taken place in linseed oil quotations, it is expected that quotations will advance by next week. Quotations at present are as follows:

Raw Linseed Oil—

Single barrels	65c gallon.
3 to 5 barrels	63c gallon.
6 to 9 barrels	61c gallon.

Boiled Linseed Oil—

Single barrels	68c gallon.
3 to 5 barrels	66c gallon.
6 to 9 barrels	64c gallon.

Oil in less than barrel lots, 7 cents per gallon. Cans are charged at: 5 gal. cans, 50 cents each; 10 gal., 75c. each.

Turpentine.

No change has taken place in current market quotations and Toronto dealers are quoting as follows:

Single barrels	69c Imp. Gal.
2 to 4 barrels	68c Imp. Gal.
5 gallon lots	76c Imp. Gal.

White Lead.

White lead quotations remain unchanged, although pig lead appears easier. Toronto quotations are:

Less than ton lots	$8.40 per 100 lbs.
Ton lots	8.20 per 100 lbs.

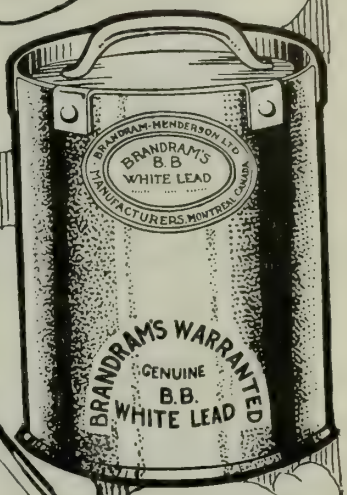
CLEAN UP AND PAINT.

(Continued from page 58.)

posed to view, what must be the conditions indoors—in cellars, attics, sheds, factories, tenement houses, etc.

"Good citizenship is good business;" as merchants, it behoves us then to take, not only an active part, but a leading part in this spring clean up, but before we go further let me say this—please don't look on this campaign merely as a business-getting scheme; it is that of course, but it is more. The "Clean Up and Paint Up" idea can do a lot of real dollars and cents good to your community. Civic pride is a feature too often lax in our Canadian towns. We're too young, or we've been too busy to care much about the appearance, or even the welfare of the place in which we live. Europe has outdistanced us in this respect, and our good neighbor Uncle Sam, has gone into the beautifying business in dead earnest, and is doing great work.

Spring—the clean-up and paint-up time of nature is here. Everywhere we see the process quietly, but effectively, going on. Everywhere the dreary drabs of winter are giving place to the fresh clean colors of budding foliage. Small wonder is it then that we poor mortals catch the fever, and with spade and rake, scrubbing brush or paint pot, do our share in the cleaning up and painting up.



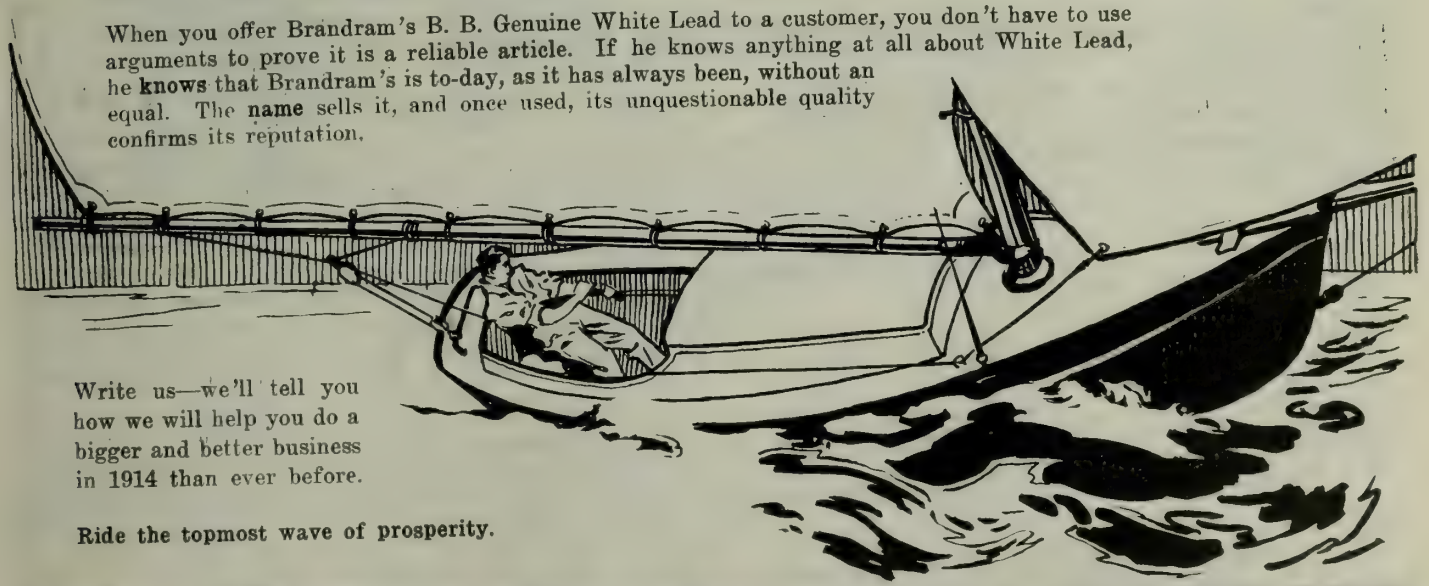
And you, Mr. Paint Dealer, are the natural and proper advocate, and organizer of the movement for homes and towns beautiful, which will not only increase your paint sales, but you will also have a better town to live in, which is still more important.

So—for the sake of your community—for the sake of your families and yourselves, and for the sake of your financial benefit, let us—all together—boost for the clean up and paint up campaign. But remember, someone must take the initiative. Every civic improvement campaign needs a leader. Why not be the man in your town? Yes! You.—

Big Sales for 1914

We Will Carry More Sail

during 1914 than ever before, pushing our business ahead with a bigger, broader and better planned Publicity Campaign than ever before in our history.



This will help dealers who sell

BRANDRAM'S B.B. GENUINE WHITE LEAD

and other B-H products. The trade in White Lead is constant and growing, particularly for the better grades, and nothing offers the dealer a better opportunity for profitable business than Brandram's.

Brandram's has, in a superlative degree, that element that never fails—**Quality.** Made by an original process that passed the experimental stage over a century ago, and used for generations by painters generally both in England and this country; it has behind it the prestige of uniform success—a reputation that is a valuable asset to every dealer who handles it.

When you offer Brandram's B. B. Genuine White Lead to a customer, you don't have to use arguments to prove it is a reliable article. If he knows anything at all about White Lead, he **knows** that Brandram's is to-day, as it has always been, without an equal. The **name** sells it, and once used, its unquestionable quality confirms its reputation.

Write us—we'll tell you how we will help you do a bigger and better business in 1914 than ever before.

Ride the topmost wave of prosperity.

BRANDRAM-HENDERSON LIMITED

Montreal Halifax St. John Toronto Winnipeg

Current Hardware and Metal Quotations

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figure being for large quantities and prompt pay. Large buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

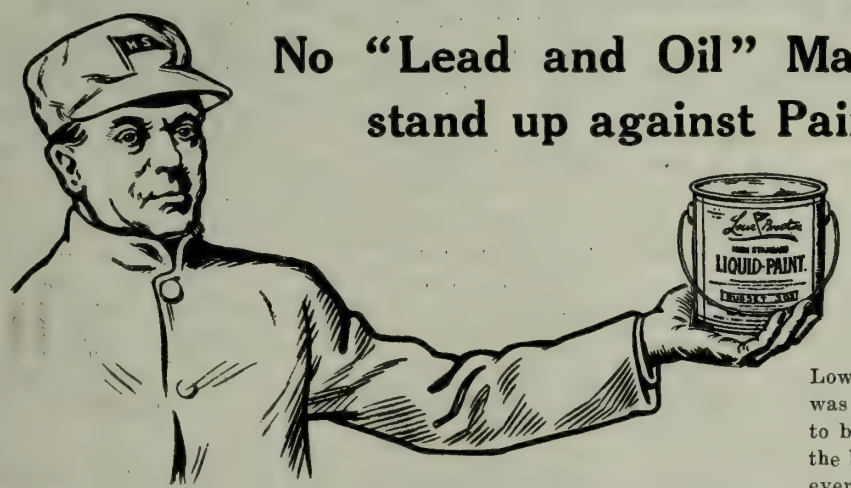
Why not be in line this spring with the brand of paints that makes every paint customer enthusiastic about results?

JAMIESON'S PURE PREPARED PAINTS

are this kind and are made to bring repeat orders—the only kind that puts real profits in the dealer's pocket. Once a can is sold, the subsequent orders come unsolicited.

We want you to be our agent.



R. C. JAMIESON & CO., Limited

ESTABLISHED 1858

MONTREAL and VANCOUVER

Owning and Operating P. D. Dods & Co., Limited

No "Lead and Oil" Man on Earth can stand up against Paint like that!

The other day a painter of the old school down in Eastern Ontario wrote us a four-page letter telling us how much pleased he was to find that Lowe Bros.' "High Standard Paint" was exactly what our dealer claimed it to be—that it actually was better than the best job of hand-mixed paint he had ever handled in his life.

The old-time, hard-shell painters, who were the hardest to convince, are to-day the backbone of High Standard's big army of friends and users. Fifty years of brains, improvement and experience are represented in every can, and don't forget the advertising proposition that goes with the High Standard agency is just as noteworthy as the quality of the paints. **To-day is the day to write us.**

An Open Letter To Our Merchants

Dear Sirs:—House-cleaning time is here again and your customers will be coming in crowds for Muresco. How is your stock? Look it up now and mail your order at once.

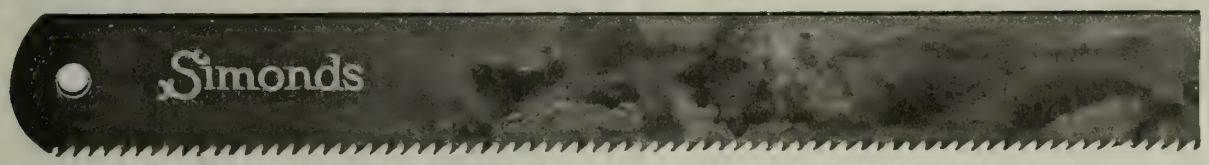
We built a large addition to our plant last year, but owing to the enormous increase in the demand for Muresco, we are building another addition this year. We would therefore urge you to send your order now and not wait for our salesman.

Write for beautiful designs and new color card.

BENJAMIN MOORE & CO., LIMITED, WEST TORONTO

Sole Manufacturers of Muresco, the best wall finish

PUSH PAINT
And Become Prosperous!



You remember our slogan for 1914. Well you can make this Paint Up, Clean Up campaign roll up the dollars of prosperity, not only in Paint, Stain and Varnish, but in all kinds of Garden Tools, Brushes, etc., as well. We have given a few hints in our space here—we can give you more if you want them. The opportunity is here for you, step out and grab it. You want the profit? Then go after the business.

No one is too dead asleep to be wakened. Blow the publicity trumpet in the ears of those who sleep in the path of municipal progress. Wake 'em up and civic pride will compel them to Paint Up, Clean Up.

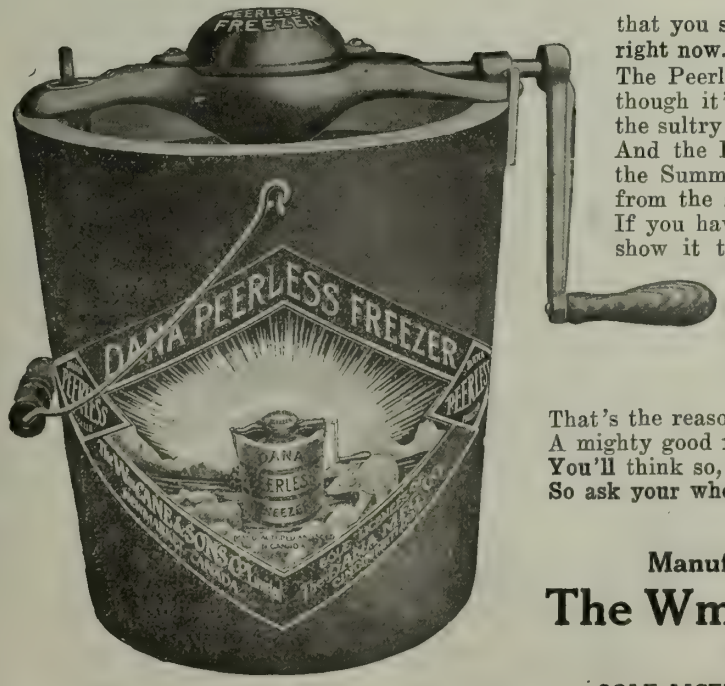
"National" Electric Mantel Type Radiators are good sellers—you just have to display them and they sell themselves.

Up-to-date builders are installing them, and many households will be replacing the old, cumbersome coal or gas grate for something new ELECTRICAL.

"National" Radiators produce heat without consuming the oxygen of the air. There is no dirt or soot, and they can be installed where there is no chimney.

Send a card **now** for our descriptive literature and interesting prices.



We also manufacture a full line of Portable and Wall-type Heaters and Radiators, Irons, Toasters, Stoves, etc.

NATIONAL ELECTRIC HEATING CO.

LIMITED

Toronto, Ontario

Let us tell you the reason,

that you should stock up with the Dana Peerless Freezer, right now.

The Peerless makes its greatest appeal in Summer. Although it's in demand all the year round—naturally, in the sultry months, the demand is greatest.

And the Peerless appeals irresistibly to those people — the Summer campers, the commuters who go to live, far from the stores, where good ice-cream is procurable.

If you have it in stock, good and early, you'll be able to show it to them before they go,—you'll have time to demonstrate it—to point out the tall, slender can—to show them how the dasher removes the cream from the sides as fast as it becomes solid. You will be able to let them crank it themselves, to let them discover that it is as easy to grind as a watch is to wind.

That's the reason you should stock the Dana Peerless **now.**

A mighty good reason, isn't it?

You'll think so, when we tell you about the profits.

So ask your wholesale hardware supply house about them now.

The plant of The Canada Paint Co., Ltd., Montreal.

Here are the Factories where C P Products are Made

YEARS ago, paints were put together by hand in a bucket—rule of thumb method—stirred with a paddle and made from raw materials which often varied in quality.

In these CP factories nothing is left to chance. Up-to-date machinery thoroughly combines all the pure ingredients according to formulas that are the result of many years' study and experience in making paint products that will give complete satisfaction.

This shows new additions to the Winnipeg factory, also the linseed-oil plant.

It is important that merchants who sell paints and varnishes should have confidence in the products they sell, and for that reason a full line made by a long-established and thoroughly reliable firm like The Canada Paint Co., Ltd., is undoubtedly a business asset that has a value in dollars and cents. Good paints cannot be made down to price, and The Canada Paint Co., in order to control the quality of the raw materials used in their products, and also to make use of these materials at the least cost, have established plants for making many of the more important of these materials. In Winnipeg, right where the best market for flax-seed is situated, The Canada Paint Co. have built their large and up-to-date linseed-oil mills. At Red Mill, Que., is situated the oxide plant of the company, beside their oxide mines. These mines produce the purest iron oxide in the world. In Montreal, The Canada Paint Co. have probably one of the best equipped and largest dry color plants in America. When you have the CP proposition explained to you and you have finally got the CP line on your shelves, you will have confidence, and every backing necessary to make your paint department the most profitable one in your store.

This Map Shows Percentage of Families Like This Which Pratt & Lambert Magazine Advertising Reaches in Each State.

We do not reach this kind

THIRTY-FIVE per cent of the families in the United States and Canada have an annual income of $900 or more. This is the class of people who can afford to buy or specify high grade varnishes. It also constitutes the class which can afford to pay 15 cents for a magazine, such as Pratt & Lambert advertise in.

The map shows the percentage of families of the kind that can afford to buy Pratt & Lambert Varnishes, which Pratt & Lambert magazine advertising reaches in each state and in Canada. It is proof of what a mighty and efficient force Pratt & Lambert national magazine advertising really is, reaching nearly all those who can afford to buy Pratt & Lambert Varnishes, without wasting money on the other kind.

Hitch *your* store to this powerful varnish selling force. Even a small stock will point the way to larger profits.

Write for the Pratt & Lambert Dealers' Proposition.

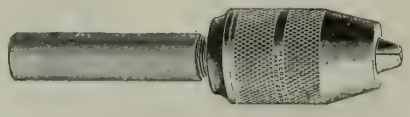
A Chuck Is Like A Postage Stamp



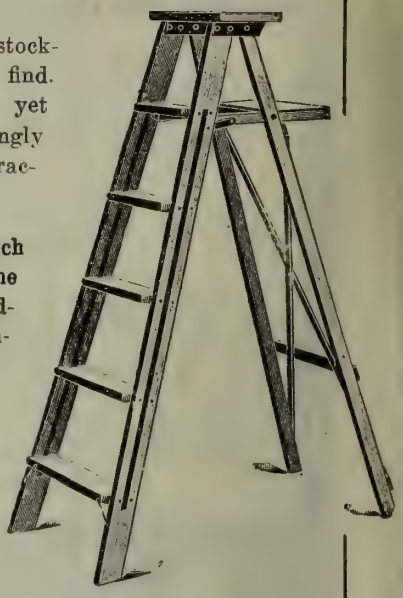
the chief merits of which, as Josh Billings says, "Konsists of its ability to stick to one thing till it gets thare."

STAR CHUCKS

are remarkable for tenacity of purpose. They hold on like grim death, yet center accurately and don't chew up or mark the shanks of the drills.

It is this combination of dependability and accuracy that makes them practically invaluable. They are simple, well made and have been thoroughly tested in actual service. Made in 3 sizes: No. 5, for shanks 0 to ¼ in.; No. 6, for shanks 0 to ⅜ in.; No. 7, for shanks 0 to ½ in. Prices very moderate. Write for details and complete catalog.

MILLERS FALLS CO.
28 Warren St.
NEW YORK



Without a doubt,

this is one of the best stock-investments you can find. Its retail price is low, yet it is good and strongly made and very attractively finished.

The handy shelf which acts as a lock makes the SHELF LOCK step-ladder extremely convenient for the home. The galvanized steel fittings make it safe for any place.

Send for prices on this very profitable line.

BUCK RBOTHERS

Millbury, Mass., U.S.A.

Heller-Aller Force Pumps

"The very profitable and reliable kind"

Pump Cylinders are made of heavy brass tubing, which has a double advantage.

It ensures the very best wear and permits the use of very coarse thread on cylinder caps (eleven threads to the inch). This prevents the cap threads from wearing or rusting off and dropping into well.

Heller-Aller Force Pumps are equipped with the most efficient, tried and tested valves. They never fail in service.

Write for full information.

When a customer asks for the best you have in stock are you able to reach up for a can of

Dougall Varnish

For whether she knows the name or not—it is Dougall she means when she asks for the best.

It is Dougall Varnish that gives the wear — and in the end makes her think your store is an economical place to buy.

It is Dougall Varnish that gives a finish that makes a housewife proud of floors and furniture.

It is Dougall Marine Varnish that makes her table proof against hot-plate marks—and the floors proof against grinding heel marks.

It is Dougall Varnish that will make a good friend of every purchaser and add to the prestige of your name as a dealer in the best.

There's a place for Everything

So goes the old proverb and it certainly was never so true as when applied to wire cloth. Awkward to cut, awkward to unroll, wire cloth can never be efficiently handled except on a **Bowser Wire Cloth Display Rack.**

The "Bowser" gives you a neat, convenient place to keep your wire cloth, where it is out of the way, yet easy to see and easy to get at.

Inaugurate a new period of store efficiency by writing for prices now.

This is the new Easy-Running Washer—

Maxwell
"Excel-all" Washer

HELPS the housewife to laugh at the labor of washday. Ball-bearings make the tub run smoothly. Top lifts up and gives heaps of room for work.

Note the improved wringer board—swings out of the way when not in use. The quickest, easiest, best-selling line you ever carried.

Write for illustrated Catalogue to

MAXWELLS LIMITED **St. Mary's, Ont.**

Build Up a Profitable Fence Department!

Handle a line of fencing that does not serve only as a mere boundary line, but one that gives real fence service—one that is built strong enough to withstand the onslaughts of stock as well as the ravages of all kinds of weather. Such a fence is

Peerless Fencing

You can sell this fence with a clear conscience. You can guarantee that **Peerless** goods will give full satisfaction. We will stand right back of your guarantee, whether it be in farm fencing, poultry fence, ornamental fence, gates or any other lines we manufacture, our policy is to satisfy every customer if at all possible to do so. **Peerless** fencing is well advertised through farm papers or other mediums. It is a line that is easily sold. Having an agency for **Peerless** will sell other goods for you.

It's Made of Heavy Open Hearth Steel Wire

with all the impurities burned out and all the strength and toughness left in. Heavily galvanized. Every intersection is locked together with a Peerless clamp. Top and bottom wires of Peerless Poultry Fencing are extra heavy—extra strong. Consequently fewer posts are required. **Peerless** fencing can't sag—can't rust—can't get out of shape—can't help giving absolute satisfaction.

For 30 days we will accept dealers' orders for our PEERLESS Farm Fencing and Gates at a special reduced price. Write for further particulars to-day.

Conventional Toronto Sipping Chocolate Is Shocked.

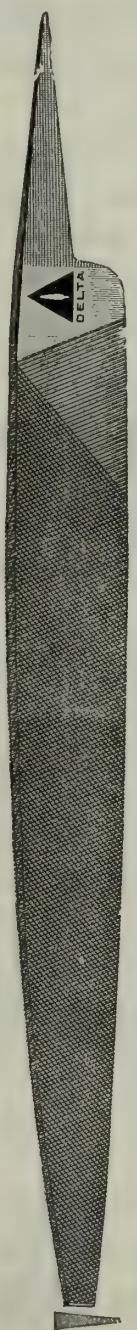
A prattlesome little bird, christened Grundyism, brought a choice morsel of news to the Dresden five-o'clock tea. Mary Anglin was on the stage! No doubt about it. Someone had seen her picture in a group outside the Academy of Music illustrating the scenes from "Shenandoah."

Mary Anglin, the Canadian, born in the Legislative halls, of a prominent family which now dignifies our Supreme Court, had secretly developed histrionic ability in New York. Charles Frohman discovered her, and Mary Anglin the amateur developed into Margaret Anglin the professional.

The story of her success is well told by Margaret Bell in the April "MacLean's." And "MacLean's" with the new Coburn art covers, with its new illustrations by leading artists, with its page drawing by Dudley Ward, a rising artist with strong individualistic style,—this is the Canadian journal that is dignifying the Canadian literary field. This article on Margaret Anglin has produced an eulogistic notice from the New York critics. If you are interested in Canadians, you will see that this magazine adorns your library desk.

Many features for the April issue, such as the five selected short stories by particular writers, the series of German masterpieces by the Berlin correspondent of the London Daily Mail; the Business Outlook by the editor of The Financial Post; the Best Selling Book of the Month by the editor of Bookseller and Stationer; the Review of Reviews with its selected condensed notes from the magazines of the world, and the special Canadian articles, will appeal to you every day of the month.

May, with its wealth of good things, follows hard upon it. Pave the way for the sure approach by ordering now.



Send us a postcard and have your name placed on our subscription list.

Subscription $2.00 a year. *Twenty cents a copy.*

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOMESTIC ELECTRICAL WORK, BY WILliam A. Wittbecker. Concise and Practical Explanation for Plumbers and Hardware Dealers, on How to Wire Buildings for Bells, Alarms, Annunciators, and for Gas Lighting From Batteries. The information given is practical, and with a close observance of the directions laid down, any one, though entirely ignorant of electricity, should be able to do the work described. Illustrated with 22 diagrams. Price, in paper, 25c post paid. Price, in cloth, 50c. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business, Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10 postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

Hardware and Metal
MONTREAL TORONTO WINNIPEG

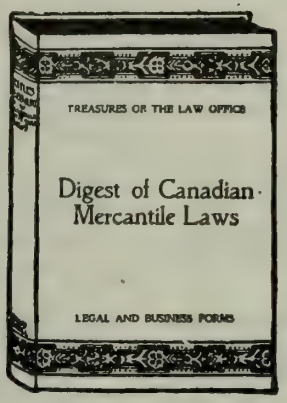
Keep in mind the dominant fact that mankind from its first appearance on the earth has been schooled by nature to look for signs; for invitations to taste; for suggestions as to what to wear. Tell your story briefly, forcibly, truthfully, and address it through the proper media and you can successfully apply advertising as a means to increased distribution.

THE "WANT AD."

The "want ad." has grown from a little used force in business life into one of the great necessities of the present day.

Business men nowadays turn to the "want ad." as a matter of course for a hundred small services.

The "want ad." gets work for workers and workers for work.



It gets clerks for employers and finds employers for clerks. It brings together buyer and seller, and enables them to do business though they may be thousands of miles apart.

The "want ad." is the great force in the small affairs and incidents of daily life.

Every Business Man Should Have a Copy of This Book in His Library

"Digest of the Mercantile Laws of Canada"

A READY REFERENCE FOR BUSINESS MEN AND THEIR ASSISTANCE. A GUIDE TO THEIR DAILY BUSINESS

IN RENTING A STORE, BUYING PROPERTY OR COLLECTING A DEBT, THIS BOOK WILL SAVE YOU MANY DOLLARS

No work ever published in Canada equals it. A veritable consulting library on this one line so universally needed. Based on Dominion and Provincial Statutes and Court Decisions. Indorsed by barristers, sheriffs, magistrates and conveyancers.
Below appears a few of the questions it answers. These are picked out at random from the book.

If you endorse a cheque which bank cashes, are you liable to the bank for the amount, if the cheque were forged or raised?—173.

(The figures after each question refer to the section in the "Digest" which gives the answer.)

Can Interest written "one per cent. per month" in a note be collected by "legal process?"—See sections 345, 185.

In going security on a note, what is the difference between writing your name on the face of the paper or on the back?—171.

Why is it that a verbal agreement to buy real estate with, say $100 paid down "to bind the bargain," does not bind either seller or buyer?—451.

If a proposition is made to you by letter and you accept it by letter, do you know the exact time when the contract is closed?—39.

How many years does it take a promissory note, a book account, a judgment or a legacy to outlaw in your province?—356, 359, 360, 367.

How long may the drawee legally hold a draft for acceptance?—209.

If a man, in the presence of witness, makes a verbal agreement to **buy a wagon,** say for $53, but does not take possession of it, will the sale be binding?—500.

What effect has it on a will if only one person signs it as a witness?—815.

If the wife or husband of a legatee signs the will as a witness, what is the effect?—816.

"A," in paying off a Mortgage, gave mortgagee a marked cheque on which was written: "This cheque is given and received as a full settlement and discharge of Mortgage No.———." Is that a legal discharge?—410.

If a person goes with his hired man to a merchant and says: "Give this man the goods he may need up to," say "$15, and if he does not pay you," say, "within thirty days, I will," will the promise bind him?—110.

If stolen goods are sold to an innocent purchaser for value, can they be taken from him?—513.

How may a person legally add "& Co." to his name, or use any special name other than his own as a firm name, without having a partner?—694.

"B" claims that the Canadian Bills of Ex. Act allows him two days, in addition to the day of presentment, to accept a sight draft, and then three days of grace in which to pay it—six days in all. Is he right?—209, 217.

If you rent a property for a year, the rent payable monthly, and remain on after the year expires, are you a yearly or a monthly tenant?—580, 608.

Can you garnishee a debtor's money deposited in a bank if you know it is there?—885, 295.

Forwarded direct post free on receipt of price.

Keep the book ten days, and if it is not worth the price, return it and get your money back. If remitting by cheque make **same payable at par,** Toronto. **Eastern Edition, Price, $2.00. Special Western Edition, $2.50.**

To meet the needs of subscribers in New Ontario and the Western Provinces, where land is under The Land Titles System of Registration, an Appendix of 16 pages, containing a synopsis of the Land Titles Acts, has been added to our regular edition, thus constituting a special "Western Edition." Price, $2.50.

Eastern Edition, Price $2.00 **Special Western Edition, $2.50**

STEEL FOLDING SAW VISES

No Loops over top
With this vise, one shift only is made.
Length 14 ins.
Weight 2 lbs.

Length 28 inches.
Weight 4 lbs.
Patent Pending.
NO SHIFT.

Folded, 14 x 1 x 2 inches.
ALL-STEEL BUCKEYE.

Folded, 14¼ x 2 x 2 inches.

NO LOOPS OVER TOP
allowing the saw to be jointed and filed without changing the position of the vise.
With this vise a saw can be filed and jointed the full length WITHOUT SHIFTING, as it is 28 inches long. It folds up in a space of 14¼ x 2 x 2 inches, and takes up no more room in the tool chest than a hammer. Being made of steel it is very light for its size, weighing only 4 pounds. We manufacture the BUCKEYE PLANE; also the old style Saw Vises, Chain Drills, Hollow Augers, Spoke Pointers, Bench Vises, Emery Wheel Dressers, Plane Gauges, Cabinet Scrapers, Etc.

Something New In the World of Guns

The 1914 Fox Gun has so many new, exclusive features—combined with such rugged, dependable strength—that it stands alone in its field.

The Fox Gun is not only a good seller, but an easy seller. Once a man sees it, handles it, throws it up to his shoulder, examines its improved mechanism—the sale is made.

And once sold—it stays sold and gains the lasting good-will of the purchaser. It advertises itself among the friends of the purchaser—brings in more business for you.

FOX GUN

The Finest Gun In The World

We have added a number of new selling features to the 1914 Fox Gun—features which will make it the easiest selling gun you ever handled.

The Fox Ejector is the final feature which makes the double-barrel gun the most desirable all-round gun.

We are advertising the Fox Gun extensively. Fox dealers are reaping the benefit of our work. Gunners everywhere are lining up at the dealers, asking for the Fox Gun.

Are you getting your share of this profitable business? Wouldn't it be worth your while to investigate the profit possibilities in Fox Guns—to see the many fine sales helps we furnish Fox dealers?

CHICAGO STEEL BENDING BRAKES

(Made in all sizes)

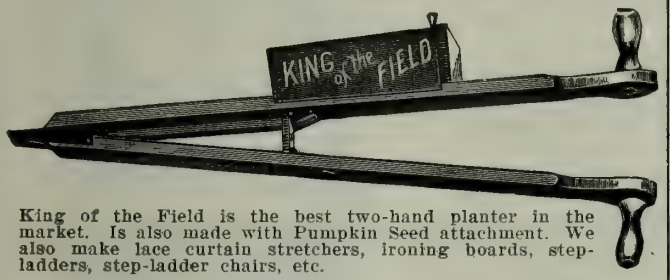
Regarding the Steel Bending Brake we purchased last spring, are pleased to report that we are more than delighted with this machine, not only with the way it is constructed, but with the work it turns out. We formerly used a —— brake, but are very glad indeed now that we have made the change. We get more speed and better results.

Yours truly,

THE McCLARY MFG. CO., C. E. Main, Manager

The Steel Bending Brake Works Ltd., Chatham, Ont.

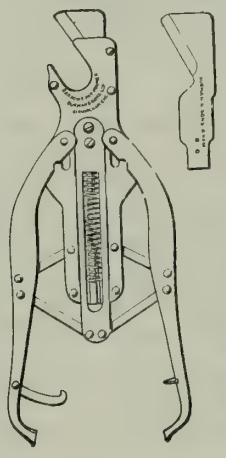
Not an Enterprise for the "Quitter"



¶ "If there is one enterprise on earth," says John Wanamaker, "that a 'quitter' should leave severely alone, it is advertising. To make a success of advertising one must be prepared to stick like a barnacle on a boat's bottom.

¶ "He must know before he begins it that he must spend money—lots of it.

¶ "Somebody must tell him that he cannot hope to reap results commensurate with his expenditure early in the game.



¶ "Advertising does not jerk; it pulls. It begins very gently at first, but the pull is steady. It increases day by day and year by year, until it exerts an irresistible power."

Corn and Bean Planters

King of the Field is the best two-hand planter in the market. Is also made with Pumpkin Seed attachment. We also make lace curtain stretchers, ironing boards, step-ladders, step-ladder chairs, etc.

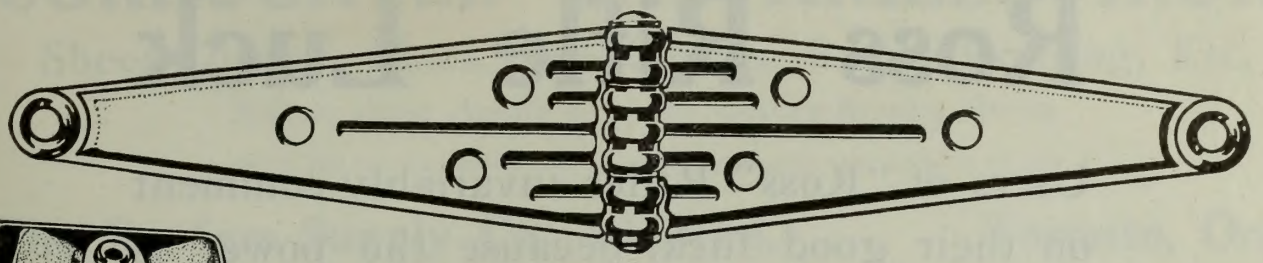
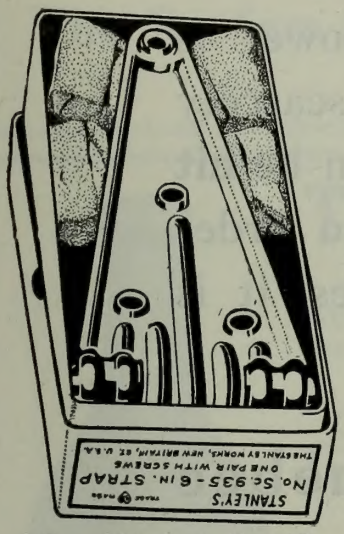
The--- 1914 EUREKA Sells Quickly with Good Returns

It weighs less than ten pounds and runs over the carpets and rugs with hardly any effort. The cleaner sets on rollers and the wide 12-inch nozzle covers a large space with every stroke, enabling rapid work. The **Flexible Handle** permits the machine to run under beds and other furniture, cleaning as thoroughly as when in the open floor space. The electricity is controlled right at the end of the handle, where a plug is inserted to start the machine and drawn out when the operation is through cleaning. Bag is easily removed and quicly emptied.





Positively guaranteed. **Every Eureka sale leads to others.**

We also make a Combination Vacuum Cleaner and Carpet Sweeper.

Onward Manufacturing Co., Berlin, Ont.

STANLEY'S

A Box of Stanley's, No. 935.

The Hinge with the Corrugated Joint

A hinge wears at the joint, and the strength is not increased by merely ornamenting the surface. That is why we corrugate the joint, thereby greatly increasing the strength.
A Stanley Corrugated Hinge is stronger, lighter in weight, will wear longer, and is better looking than any other hinge made.

ASK YOUR JOBBER FOR

Stanley No. 935, Corrugated Heavy Strap Hinge
Stanley No. 937, Corrugated Extra Heavy T. Hinge

In bulk or packed one pair in a box, with screws.

ALL STANLEY PRODUCTS SHIPPED PROMPTLY.

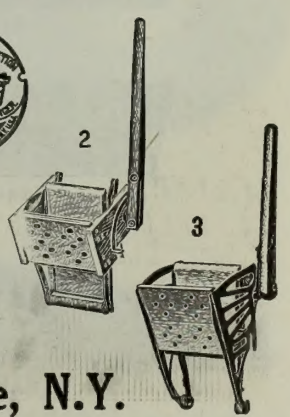
BOOKS FOR HARDWAREMEN

Every hardwareman can get valuable pointers and make his business a more profitable proposition if he will study the experiences of experts who have 'made good.' Our Technical Books for hardwaremen cover a wide range of subjects, among which may be mentioned Metal Working Books, Hardware Window Dressing, Store Business Methods, Paints and Painting, Salesmanship and Sales Plans and Advertising. We have also the very latest books on the plumbing and heating problems.

Technical Books, 143-149 University Ave., TORONTO



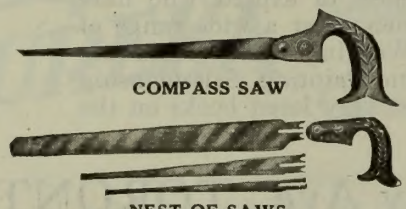
THE WHITE MOP WRINGER

always bears this trade-mark

LOOK FOR IT.

Janitors and Housekeepers praise these wringers, because they wring easily and neatly, are durable, practical and useful.

Ask your jobber for them or write to us.



White Mop Wringer Co., Fultonville, N.Y.

Ross Rifle Luck

Users of "Ross" Rifles invariably comment on their good luck, because the power is such that judging of distance is scarcely necessary, so if game is **seen**, it can be **hit** and **bagged**. Dealers are wise to order early, as, despite increased facilities, it is difficult to keep up with orders.
